FS Radio Shack PRO 26 (2 of them) bought new on 1-29-98

checked them at time of purchase to made sure that they were
NOT repackaged. bought 2 of them at $212 each.

shipped to you at $210 each. will include copy of receipt for
warranty, or if any problems occur, just get in touch with
me and i will have it checked out here locally.

radios are in like new condition.

Probably they are tumbling, and the apparent "burning" happens when
the nozzle is facing you and the remaining exhaust plume (solids don't
shut down instantaneously) is particularly visible.

6. Re: Keypad mods for Yaesu VX-1R?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: Worthlin <rst579@uswest.com>
Message-ID: <6fv9ng$iph@argentina.earthlink.net>
Source record: 148412

When you mod the VX-1R to receive cellular it thinks it is a European model and the automatic repeater offset (U. S. repeaters) will no longer work and you have to program each repeater individually which is a pain. The unmodified radio receives cellular on the image frequency almost as well as with the mod.

<<<<<<<<<<<<<<<<<<<<<<<<"Greg Ottria" <Gottria@inreach.com> wrote:

>Hi Rob, Check out http://www.icongrp.com/~sllewd/ for all the info you will
>ever need on the VX-1R.

I've seen this one, but it has no keypad mods. All the non-hardware mods you find there require ADMS-1D, which I don't own yet (yes, it's ordered some weeks ago).

TNX anyway...

From: "Adnan S." <adnansx@msn.com>
Message-ID: <6fvap5$mht@argentina.earthlink.net>
Source record: 148415

If you don't like the original mic gain, you can send your HM98 to Icom to be modified. Mod involves changing a surface mount resistor R 40 on microphone's PCB from 2.2 KOhm to 560 Ohm.

You can get them from Icom. On top of my head, RN1202 is a self biased
surface mount transistor. It can't be replaced with a regular transistor.

Hello and thanks for reading. I have the following for sale.

1.) Yaesu FT-890AT $700.00 OBO
100khz-30MHz Rx
160-10M Tx
I have all supplies including manuals for rig.

2.) Radio Shack Pro-46 Scanner $150.00 OBO
100 channel programmable Scanner.
Excellent little handheld scanner. Covers 29-54, 108-174,
406-512,
806-823.9375, 851-868.9375, and 896.1125-956 MHz.
Still have original packaging and user manual in good condition.

Scanner is in very good condition.

Any ?s or if interested e-mail me at jboehm@financier.com.

17. Re: List of the rec.radio newsgroups (brief)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6fs9pj$76p@news.Hawaii.Edu>
Source record: 148460
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and the contents of such a thread drift further and further away from being "on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

>Cheers,
>Rick Curtis
>WA6JKH

Rick, check to see if it's sensitive to rocking or motion on the volume
control, and if so, on any of the volume/squelch or rit/passband knobs.
I'm chasing a terrible noise problem on mine and it seems to be coming
from the connection between the little daughter board that carries both
these concentric potentiometers, and the main board on the display head.
It's a little 6 or 8 pin connector, and it seems that something has gone
awry there as any pressure on either of the concentric shafts does all
kinds of nasty things to the audio. I'm going to resolder the connections
to the little mating connector, and if that fails, rip the connector out
and hardwire the daughterboard to the motherboard. I'm mentioning it
because my symptoms initially started similar, and having looked at the
flimsy little connector it looks like an obvious point of future failure.
Doesn't seem like it will be too hard to fix though.

I'd be interested in these 2 items if you don't get a buyer for the entire package. I collect and restore old tube-type gear, most of which I use - Ham and CB (got my start in CB in the early 70's).

Would appreciate hearing from you if you have anything else FS in this category.

Thanks, Todd

I've had my Mini-Quad, a very small HF antenna, on one of these things,
and it's been up for years. Still turns OK. I don't think it's
pointing the direction it was originally installed at, but I just
run outside to check which way the beam is going and leave it at
that.

34. FS: MFJ-1274 TNC...LOADED!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: Don Frank <dhf@writeme.com>
Message-ID: <3522C920.A859A494@writeme.com>
Source record: 148477
Cross-posted to: rec.ham-radio.swap,rec.ham-radio.packet,rec.radio.amateur.equipment,rec.radio.amateur.packet,rec.radio.swap

I have a heavily modified (enhanced) MFJ 1274 TNC for sale. It has the NB-96 G3RUH 9600bd modem installed, and has a dual image eprom allowing switch selection of either the standard TNC-2 firmware, with KISS and APRS, or the WA8DED Host Mode firmware which many packet programs are written to use.

I have added a couple of front panel switches.One allows selection of 300, 1200, or 9600 bd operation, and the other selects from one of two inputs.

The 1274 has a tuning indicator and works great on HF packet at 300 and 1200 bd.
The 1200 and 9600 bd capability is used on VHF/UHF packet. With the dual input capability, they can both be connected at the same time , and switch selected.

I also have installed the TAPR XR2211 DCD upgrade kit for optimum performance on busy frequencies.
The unit comes with complete documentation and radio interface cables.

I am no longer active on packet and will ship this unique TNC to an aspiring packeteer for the modest sum of $160.
If interested contact Don, W9SL, at 303/814-1503, anytime, or via direct email.

Nice radio- great audio-twin band scan two at once-transmit on about any freq. 2m, 440, public safety, rec. AIR -CELL-just about anything....Looking to swap for similar radio- standard, icom, etc- of same or equal value- email me with what you have, COMES WITH ORIGINAL BOX, DROP IN CHARGER, MANUAL

36. IC:746 + Nice Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: sereikas@worldnet.att.net
Message-ID: <6fuj96$oo3@bgtnsc02.worldnet.att.net>
Source record: 148479

I have a IC-746 and I have to let you know, it is a great radio. I had previously played with a IC-756 in my shack for about a month (friends radio) and I definitely prefer the 746. It has basically the same receiver and transmitter, but no dual-receive(big deal!). It is very user friendly.....much better than the 756 (IMHO) and although the panoramic display is not as good....i.e., not real time, it has all of the other features + 100W out on 2 Meters and Xmit Monitor.

If you want to use the radio on FM for 10FM, 6M or 2M it has separate "duplex" capability for each and also includes both CTSS Encode AND Decode.

It seems great so far, I'll keep you posted. I think that it is a great radio for the money.

Source record: 148496

I don't know much about the SP-5 but the SP-6 has both a high side
and low side filter, they do alright. The SP-6 also has a plastic
plate that is removable to make room for a integrated phone patch
or the TimeWave DSP unit that will fit right in there - that's sweet
but expensive. The SP-6 is styled to match the FT-990 and associated
radios. I have one and although these matching speakers are always
overpriced (I got mine used) - I love it, it has full rich sound and
looks good. The SP-6 also has an A/B switch for two audio inputs.

Which is precisely the reason I've held onto my Ten Tec Corsair II. When I want convenience and features, such as for net operations, I use my 706 MkII. When the QRM gets tough, and I want to hear the "weak ones" or make that rare DX contact working split, I shut down my 706 and connect the coax to the Corsair II with auxiliary VFO that can listen on two HF frequencies at the same time and power through the pileups with it's companion Centurion amp.

Choice of radio depends on your operating style, and if the wallet can afford two rigs in the shack, the 706 MkII makes a great second rig, or if one is on a limited budget and wants a lot of bang for the buck, while understanding that it is a "compromise" radio, the 706 MkII can't be beat.

Mine is eat SLAM up with the "intermods". WLO booms in above 30MHz, AM broadcast stations "magically" appear below 500KHz, FM broadcast stations seem to tune two or more at the same time, but inside the ham bands it's pretty decent.

My two-cents worth- 73 all, -Web Williams, KR4WM in Myrtle Beach, SC

The main difference is height. The FT-990 and FT-1000 are not the same
height. The matching speakers are different heights to match the
radio's.

No, he means 70MHz- The Europeans and Africans are allowed a small sliver
of band there. We're working on obtaining access to the band here, but
don't hold your breath! The 706 MkII will work 70MHz if you mod it like
it says to on http://www.qrz.com . 73, -Web in Myrtle Beach, SC

I have a like new condition Yaesu FT-767 with 2M module.

I have the original box, manual, and accessories.

I would like to give it a new home, has been very well cared for!!

$1200 + Shipping. 5 Day money back guarentee if it is not in the
condition I have described.

Contact Craig (cpu_nut@yahoo.com), or (703) 444-1285 Day/Eve in VA.

The Swamping resistor is a 100 ohm resistor. You should not have any
problem driving the amp with 130 watts. Sounds like the tubes are
soft..

I have converted mine to use two 8874 tubes, your cooling will have to
be modified but I drive mine with an icom740 at about 60 watts to over
1300 watts input this gives over 800 watts into antenna at 2200 volts.

My grid current never goes up to 50 ma..

It sounds like the tubes have been run to death... I keep the drive
down and normall normal 40-50 watts gives me about 500 watts into the
antenna which is enough...

No do not remove the swamping resistor as there is a problem with the
tubes more and likely, Talk to SVETLANA and they have plans to
convert the linear to different tubes which will give you very gud
output with 50 to 60 watts drive..

> is a YIG oscillator. Ughhhhh. HELP!
>
> 73 Dave WB0GAZ dgf@netcom.com

The YIG itself is not likely to be at fault. It sounds like you either have an oscillation in the YIG driver board (typically this is a single-ended power transistor driven by another bipolar, which in turn is driven by an op-amp, with a voltage feedback loop around the whole shooting match), or an unstable PLL.

In either case, open 'er up and find every trimmer potentiometer on the YIG driver and/or PLL board. Mark the position of each trimmer adjustment with a fine-grain pencil (better still, a sharp-pointed tool that won't leave graphite dust on the trimmer). Then, work each pot's adjustment back and forth several times, eventually returning it to its original setting. See if that helps.

Bob Pease has the right idea: trimpots are the Devil's invention, multi-turn precision trimpots doubly so. Odds are good that's your problem.

Still, if that doesn't work, repeat procedure above, perhaps with a little bit of tuner cleaner this time.

Failing that, you'll probably have to order the manual from Ed Matsuda or someone, and dig in with a scope.

This isn't likely to be a tough problem to track down. The signal at either the main or FM tuning coils on the YIG oscillator module will be exhibiting a lot of noise and/or oscillation, easily visible on a scope. All you'll have to do is follow the signal back through the driver chain and figure out what stage is contributing the noise and/or oscillation!

Don't remember the reset combination, but will comment on removing the solder. Just take a close look at it with a magnification glass...or at least I needed to. Placed some solder wick (finely braided copper) over the solder pad. Place soldering iron on the wick just long enough to melt the solder and wick it up. Radio Shack or other electronic supply store should have the solder wick.

John, you DO know, that to get the most broad-band results, that you need
to remove a chip resistor as well as the jumper.
As for using solder wick, I prefer a suction-type desoldering device(the
Edsyn ones are inexpensive, and work well)...consider getting the
anti-static versions though(even though they cost slightly more).

The reset is knob, lamp and power.

Btw, before somebody points out that you can patch the radio data file
(.rdf) to avoid having to remove the chip resistor-this probably does
work(I've not tried it, so I can't say for sure)...but:
1.it's probably more work, unless you are way better with a hex editor,
than you are with a soldering iron.
2.it requires you to have the programming cable and software(you really
should have this(it's well worth it)), but if you don't have it then the
patch method will not work.

Try this url for the mod info http://members.aol.com/aeimn/ft50/index.htm
....if it does not work, or if you have other questions, let me know.

The 706 is a convient, portable rig that leaves a lot to be desired from a selectivity stand point and dynamic range. I have one. as a matter of fact, out of a dozen HF rigs from the big 3 over the last 10 years, none have filtering as good as the Tentec Corsair or Collins I had 15 years ago. Bells and wistles galore, yes. Solid RF performance though, is lacking.

Whoa, there, "Mister Know-it-all"! Vic White, W5LRU, is NOT the owner of this gear! He is offering for sale on behalf of the family of the deceased ham, at the price THEY asked him to sell it for. Vic gets no money for this effort. He's just an honest gentleman who is doing a favor for the deceased's family. Vic is the president of the Denton County Amateur Radio Association, and he is heavily involved in public service, Skywarn, and so forth. Why do idiots like you always have to spout off when you don't even know the facts? Why do you assume that EVERYONE is out to make a buck? Doesn't it ever occur to you that SOME of us hams still do FAVORS for other people, or have you become so jaded that you can't see this? You are pathetic.

There is a chip resistor that is changed in the mike and then the
deviation is reset. It can be done under warranty. Takes about 15
minutes...

99. TS-50 TX on CW fault, update.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: Graham Galbraith <no.spam.graham.galbraith@virgin.net>
Message-ID: <3522E1AF.1C8D@virgin.net>
Source record: 148542

Hello, if you're reading this you may possibly remember
my original query re: A recently acquired Kenwood TS-
50S which was going straight into TX when CW
mode was selected, or when a memory channel with
CW programmed as the mode was selected.

An additional quirk (which I didn't know of at the time I
posted my original message) was that memory channels
could not be programmed, because the M.IN button was
not working properly.

BOTH of these faults were caused by a bent switch
contact in the CW key socket which I have replaced
today. The second symptom is quite baffling, but the
logic presumably does not allow memory channel
programming while it thinks the radio is in TX.

Thanks to all who were kind enough to reply to my
original query.

I have seen references over the years to an Atlas (makers of 210x,
350xl, etc)
RECEIVER only. Did in face Atlas ever make a separate receiver? Perhaps

a companion to the little tranceivers? Any information would be
appreciated. Have
had several Atlas pieces (inc. my 2-210s) and think they're
interesting. I'd love
any info about more obscure pieces, and if a separate receiver was made,
I'd
like to have one, if reasonable.
Thanks, Walt WB5LJW

I've had to repair
all 3 of my Kenwoods microphone PTT switches.
Kenwood repaired the first
one, under warranty, I did the other two.
Their the newer style back light
DTMF, I found a replacement from Digi-Key.
Digi-Key Part number SW408-ND,
this is 150g force.
If you like a lighter feel, then I would go with ...

Digi-Key Part number SW407-ND, this is 100g force.
These are made by
Omron, minimum life is 300,000 cycles,
Should last a little while,
cost...45cents. They do have a minimum order
Digi-Key # 800-344-4539
I
hope this helps,

Hey, you old curmudgeon,

You may be thinking about the RX-110, which was a small, simple receiver
that Atlas sold back in the 1970s. They also made a companion transmitter
module which used the receiver VFO and formed a transceiver. It mounted
in a sort of docking arrangement, similar to the 210X base station docking
unit. I recall seeing the RX-110 and TX-110 (what they called it if you
bought the transmitter module too) in the magazine ads in the 1970s. The
transmitter was available in 10 Watt and 100 Watt models, by the way. I
have only ever seen one of these sets in person in my 21 years of hamming,
and that was about three years ago at the Weatherford hamfest. The set
was beat all to heck and I doubt it was working. No paperwork either.

Well, maybe it will be easy to spot. I don't know exactly what internal frequencies
are involved, but if it's anything like a spectrum analyzer...
Picking some simple numbers at random, if the YIG is at 2 GHz., 40 MHz is only 2%.
Stated another way, at 20 MHz/ma, the current noise only has to be 2ma. Last time I tried
to find a problem like this, the noise induced by hanging the probe on the circuit was as
much
as the noise I was looking for. Had to disable the PLLs and use indirect measurement with
another
spectrum analyzer to isolate the fault.

Check the manual. First store the receive frequency in the memory location
normally. Then set a VFO to the transmit frequency, and store that in
the same memory location while pressing the PTT button. This stores
a transmit frequency while leaving the receive frequency unchanged.

Note that this does *not* allow full-duplex operation like a true
dual-band radio could do. You transmit on one band and receive on
the other band, but you can only be doing one of those at a time.

I had originally thought that I had a battery that had gone bad, but I've now noticed that both of my Alinco DJ-580 batteries, one an original EBP-20N and one a W & W Associates WC-520-EBP-20N have both now 'gone bad.'

So I check the standard slow charger. Without a load the terminals read 19v or so, not abnormal for no load. But with a 10 Ohm load, the terminal voltage drops to 1.36V. Unless I'm dead dumb, this means my charger is dead.

Someone let me know if I'm wrong before I order a new one.

Thanks!! :)

Stan,

I have exactly the same problem with mine. I sent it to a very reputable independent radio service center which shall remain unnammed.

They worked on it a while, found some "burnt ground traces" and sent it back with the same problem. I had heard about the liklihood of it being the DC-DC converter and asked him to specifically check it which he did and said it was ok. I talked to another 850 owner who has sent his back to K twice. Both times replacing the DC-DC converter to aparrantly fix the problem.

I don't like sending things back to K either so if you find any answers PLEASE clue me in too. In the meantime I found a good deal on a used TS 690 and have been using it. But I definitely want to get my 850 working properly again which it had for many years before this problem surfaced. It is a much nicer radio to operate and I want to dedicate the 690 for another purpose and use the 850 as my main general purpose HF.

Thanks for any help

John aa7uj@aol.com

: this: Are these things worth the money? I mean, is 200-300mW going to be
: practical for everyday use? Am I going to be able to hit the LOCAL
: repeaters with these, from 2-4 miles away?

Don't recomend these as your *only* radio. But within their limitations
they are great. I own both Alincos.

Generally, you have to be within "spitting" distance of a repeater, but
2-4 miles sounds like just fine (assuming no hills or the like between you
and it)

>> 1 frequency on 144 MHz band, the other in 430 MHz band

If you have the ADMS1 software all you have to do is enter the receive and transmit frequencies. I have several memory locations programmed with 2 meter receive and 440 transmit frequencies to be used in cross-band mode. Usually you can hear the repeater, you just need the extra oomph of the mobile rig.

: Your right - there is no squelch adjustment on either the DJ-S41 or the
: DJ-S11.

Yes but it is common for *commercial* HTs not to have a sqelch control
either. Lack of one on these fine radios does not bother me, but if
everyone had the same likes and dislikes we would all be driving the same
model cars.

I ran an Antenna Specialists thru-the-glass 2 meter antenna for several years. I took if off my car and gave it to a friend who now has had it on his truck for several years. Both he and I run/ran 50 watts with no problems. I believe the longer trunk-lip mount antennas may work a bit better, but in and around town the Antenna Specialists has worked admirably for both me and my friend for at least four years.

It does, however, sweeping just compounds the situation (the whole 40 MHz band of garbage just sweeps up the band when you sweep...). I believe I have the problem tracked down to the "frequency expansion module" which it turns out is a YIG oscillator. Ughhhhh. HELP!

Source record: 148594

Dave,

I have an HP8660C that exhibited the same symptoms. Additionally, I found that when tuned to a center frequency greater than 100 MHz, the generator worked fine, but if I stepped the frequency anywhere below 100 MHz, the FM modulation would begin.

After poring over the service manuals, I decided to realign the N1 and N2 loops and the SL1 and SL2 summing loops. This cured the problem, and the 8660C has been fine ever since.

Hope this helps,
Stan

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function
A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made. Will include unfilled warranty card and original bill of sale.
Comes with original box and packaging material.
Still on warranty for one year, this is new equipment.
If interested, contact me by email.

136. Re: ANyone used Force 12 Antennas?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: Ron N6AHA <ronc@sonic.net>
Message-ID: <01bd5d25$0f5f0320$2ce6c9d0@ron1>
Source record: 148600

I have Force 12 antennas (C-4 and 75 Meter rotatable dipole) and have been very satisfied. No amount of rain bothers them (unlike the trap beam they replaced) and they have survived plenty of storms that crunched other systems in the area. Performance of the two element system is about as good as a three element trap beam on the same size boom. ...and they look nice, too! Without question, they are the most trouble-free antennas I have owned since I started in ham radio in 1963.

138. FS: Yeasu FT-51R w/ accessories.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-01 00:00:00 UTC
From: Mark Carey <mcarey@columbus.rr.com>
Message-ID: <6fsikg$k1a@m5.columbus.rr.com>
Source record: 148602

Hello,
I purchased a FT-51RH a while (June 1996) ago and have replaced it recently with an FT50RDH. As such, I don't need the FT51RH any longer. Or rather, I need the money more than the radio.

For the paltry sum of $400 you get all the following (if my price is way out of line please feel free to make an offer, I'm not sure what this goes for new anymore.)

Unit includes:
* FT51RH - Perfect working order, minor case dings.
* Charger - Perfect.
* Original Boxes and manuals, including the Yeasu sticker.
* MARS/CAP mod has been performed on the unit and it is extended receive mode.
* A nearly unused transmitter :-) (I am not licensed and use it for monitoring only, friends who are licensed have used it but rarely.)
* 2 AA cell battery cases.
* Nicely conditioned NiCad battery (I've taken very good care of it, full discharge/full charge cycles only.)

For those who don't know, the FT-51RH is a very nice Dual Band, dual simultaneous channel radio. It is capable (in extended mode) of reception from 110 MHz to 180 MHz (tuned for 2m operation), and from 420 MHz to 470 MHz (tuned for 70cm operation). It has a number of other features as well: CCTSS (pl) tone transmit and receive mode, DTMF facilities including paging, auto repeater offset (in ham bands) and lots lots more. Overall an excellent radio for operation in the 2m and 70cm bands.

For those who wish the verify that the unit is not a stolen unit, the serial number is available if you inquire.

Thanks,
Mark Carey.

You will have to remove a SMD diode, it will TX up to 66 MHz,
(but in miliwatt). The TX up to 58 MHz is quite good.

Posted this in a prev. msg... but it was kinda lost in the questions..
Have Motorola headset/mic, behind the head for use with cap, etc, like the 'Nascar' guys use except black. Dynamic mic element. Could use earpads, these are a bit too mushy.. has top velcro adj. strap and coiled cord. Boom adjusts in/out, hinged halfway and mic pivots. works great! it's a 4pin plug now, but have the factory barrel plug (4contact) desoldered, not cut. It's model NMN6064A SP04 if u wud like to look it up at Motorola's website or elsewhere. List new: $500 Priced at $90/firm/uship Please email if interested!
thanks!

Audruis,
I am currently using a Radio Shack rotor for my 14 element two meter beam, with an Isopole on top of it, and it works great. The only problem, as mentioned before, is that it will turn when the wind blows on it and I have to reline it every 3-4 months. I disconnect the wire, and turn the control to the direction the beam is. Works great.

Had the same problem, company called Digi-Key makes a replacement part to fix that runs about 2-3 dollars by the time you ship it, by the way this is the first realistically priced 733 on the group in a while!!!!

800-344-4539 is the company's number, at least that is what my scrawling in the manual looks like!

Source record: 148271

The RCI-2950 power cord is the standard cord used on almost all Cobra, Uniden, Midland and other CB radios. (cobra 29, 148,25) the only difference is that the fuse in the holder has to be changed from a 2a to a 6 or 7 amp. These power cords are available at any CB shop for around $5. If it's the socket in the radio you are looking for, call Cobra parts dept. (1-800-cobra-22) if you can't find locally. Good luck.>

Hello I recently purchased an RCI-2950 and I need the power cord connector

At QRP power levels, I'd suspect interference through the power lines. Try transmitting into a dummy load. If you still get TVI, try a power line filter. Could you borrow another rig to try from your location? You might have some sort of major problem with your rig. The ARRL RFI book is great -- check it out. You might also subscribe to the RFI e-mail reflector. Ed Hare, the editor of the ARRL RFI book, is a regular contributor. Good luck -- here's the info on the reflector:

> To subscribe to the group, send a message to rfi-request@contesting.com

I carried my DJ-S41T in my pocket with the antenna folded down.
Found it picked up lots of junk. When I flipped up the antenna, it was
much better. Only think I can think of is that maybe the folded antenna
is picking up a higher level of junk from the radio and mixing with other
junk in the airwaves.

158. DRAKE B-LINE $395

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-02 00:00:00 UTC
From: D Ostroy <anti-spam@worldnet.att.net>
Message-ID: <6g1c44$aio@bgtnsc03.worldnet.att.net>
Source record: 148274

For Sale: Complete Drake B-Line

T-4XB, R-4B, AC-4 Power Supply, and MS-4 speaker.

In excellent condition. Both rx and tx cover 80/40/20/15/10 meters.
RX also has crystals for 160, 30, 18, 12, and 10CW, for transceive operation.

Tubes are not new but tx puts out full power on 80 to 15,
slightly less on 10. Will throw in a spare set of finals.
Recently (1996) replaced the high voltage capacitors in the AC-4 supply.

I am the second owner (since 1978) and the rig has only been lightly used.
No contesting. Cosmetically it is very clean (non-smoker) and includes
original manuals.

Best offer over $395.

I hear they can be moved up to 900 MHz Ham band if they are NOT trunking,
but I don't know the details. If they are trunking, they are basically boat
anchors.

The Ham Dealers in Japan are charging 168,000 Retail or street price. Divide that by 135 Yen to the USA Dollar and you get under $1300 USA Dollars actual cost. If you pay $1820 plus shipping from the USA Dealers you are getting taken. I will be in Japan for two weeks next month. I plan on buying one. Yes, the Dealers there sell the USA version also. Perhaps I should take orders and start my own export business.

One other difference: If you do the S/W mod only, then that will be the only way to change bands (e.g. back to A1) if you ever want to. You can't do it in the field with the reset and knob (which you can do if you've performed the hardware mod). I doubt that is useful to many unless you want it as an escape hatch to reset the radio back to stock. (Just because you're paraniod, it doesn't mean they're *not* out to get you) :-)

I agree, the battery charging is a weak feature. I have resisted buying another battery for this reason. I'd like to have 6 char on the display when using the CS-T8 software (minor). I also like the extended Rx, I monitor 72mhz for radio control airplanes - same with 53mhz.

Eddie:

I've never been into a 5100/5200 rig, but I understand your concern.
Since
I obviously don't have a schematic in front of me, it kind of goes
like this. Most COS sigs are present just in front of the squelch amp.
The 'squelch' circuit is typically shown on your rigs schematic. If you
have a volt meter, clip the ground lead the the chassis and while
opening and
closing the squelch, check various points on the circuit board for the
widest swing in voltage (greater than 3 volts either way).

For the audio, tap into the circuit just ahead of the audio amp, again
typically reflected on the schematic.

I know this is your basic 'hackers' method that has its potential
for causing blue smoke, but it is an option to paying for a tech or
hunting down somebody in your area to do the same.

Goo luck,

Shawn WB6JWB

Well, I've had my Ten-Tec Scout for 1 day so far (No Joke) and
I just got the thing running tonight. Still, I know from past
postings in this user group, there are lots of Ten-Tec Scout
users out there that love their rigs.

For me the radio is a reasonable cost, easy to use rig. I know that
some may point out that if you purchase all the band modules, you
could have purchased another rig, like the Alinco DX-70T. OK, but
if you're like me (a Tech Plus), I'm not going to work all the bands.
Even if I pass the 13 WPM test next week, and get my General class,
I still don't plan on going on all the bands.

73,
Bob

Wrong, it is the US dealers getting rich off eager Hams, or rather
appliance operators who inflate their egos by having the newest gear.

Let them get ripped off. In a few months the radio prices will drop
and in a year or two the radios will be offered for even more
reasonable prices.

177. FT-50R new firmware?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-02 00:00:00 UTC
From: tracker557@aol.com
Message-ID: <1998040208450500.DAA12542@ladder01.news.aol.com>
Source record: 148358

I read a posting that the new firmware version for the FT-50R came out a few weeks ago. I heard that this new firmware does not allow one to switch to 'FREE' band after performing the hardware mod for it. Does this new firmware still allow the software mod to be done? If so, perhaps someone could point me in the right direction to get this mod?

Thanks,
Tracker

>unmodified radio receives cellular on the image frequency almost as well as
>with the mod.

The modification I really want to do is enable Wide-TX (not freeband)
and 'AllowAnyBandScan=1' as described in the unofficial mod-page. My
version has cellular enabled as it is the European version, however
it's the wrong EU-version.

Mine does auto-repeatershift like -7.6MHz on 430, and it should do
+1.6MHz.

This all can be fixed by using ADMS-1D which I'm desperately waiting
for (for some weeks now).

From: Michel Morin <morinm@csgoeland.qc.ca>
Message-ID: <xCLU.3$xt6.46871@carnaval.risq.qc.ca>
Source record: 148363

Hi there
I have a brand new ICom IC-W32A dual band ht for sale.
It comes with the following accessories:

CP-12L filtered cigarette lighter adapter for 5 watts out and recharging
battery.
HM-46 speaker microphone.
instruction manual.
warranty card.
original box.
BP-180 battery for 3.5 watts output.
CSW32 programming software.

HRO price for the lot is a little over $400. U.S.
Shipped insured to your door for $300. U.S.

For the full specs, a mini review and mods, see my temporary web page at
http://207.35.13.100\ham\index.htm

No hardware mods have been done on the radio.

Reason I am selling is that I need money to buy an hf rig. If interested,
please contact me by email.

Postal regs forbid c.o.d. shipments from Canada to the U.S., we can arrange
something.

Received my FT-847 abt 4 days ago. Could not wait to get
it on the Sats. Afer a few minutes of clearing off all
my other Satellite equipment (736r,amps,etc.) I set up
the FT-847 and connected my computer to the CAT port and
was ready to go for my first Sat contact on this rig.

The Set-up here is : computer running the "Station"
Program. Computer also controls my antennas thru the
G-5400B Rotor. 20X elements on 144 and 30X elements on 435.

My first attempt to turn on the CAT worked but thats
all it would do (just turn the CAT on and off). It would
not go into SAT mode with the computer. Had a Software friend
of mine look at the CAT codes and found out that most of the
codes for the 847 are different than the 736r. He is going to
write new codes for me this weekend so automatic doppler correction
will have to wait.

First contact on the SATS was with N9RPQ...Tom in EN53
on AO-10 Mode B (435mhz up...145mhz down). Tom gave me a
great audio report and I could hear that my audio on the
downlink was sounding better than my 736r. My voice tends
to be bassy and this radio was emphasing the mids and highs
sounding more like a Heil mike. Also I noticed the output
power was more than sufficient for mode B. I used to run
abt 100 watts on mode B but the 847 running 50 watts on
435 was more than enough.

I will make some more Sat contacts today. I am really
looking forward to running Mode A on one radio (145 up and
29mhz down) as no other radio on the market today can do that.
Yes the fans are on all the time but I installed a CPU cooling
fan in my 736r power supply and that ran all the time and I got
use to it. Besides my computer is in the shack and THOSE fans
are running all the time. I find the radio very easy to use and
program. Having both displays on at the same time is neat and
being able to swap VFOA and VFOB is neat as I can put the uplink
on the main dial to QSY fast and then swap them back again. this is
something the 736r could not do.

My HF receive seems to be more than satisfactory as the last
rig I was using for HF and 6 meters was a IC-706. The 847 is as
Yaseu promised...it holds up well in the presence of strong signals.
Also noticed the Receive sensitivity everywhere is very good.
The Menu Systen is excellent. For instance you can turn the 12v
to your antenna connectors (144 and 435) for in-line preamps on

and off using the menu (no need to remove the case).

I find it a VERY flexable radio and so far am very happy
with the performance on HF and the SATS. Will I sell the 736r?
Not yet. Just thought I would write this reveiw as I see there
are very few Satellite operators on this Newsgroup and in my
humble opinion this is a rig for the guy who works the Sats
most of the time and HF sometimes (not the other way around).

If you put the VX-1R in the "Freeband" mode then the auto repeater shift (ARS) will not work. But if you just enable wide band transmit and open up 800 then you will still have the ARS. Also in the newer version, A106 the AM DC band is MUCH better than any previous versions.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,oh.forsale,us.forsale.misc,us.forsale.d,misc.misc,us.misc

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

Wayne L. Anderson

I think you are refering to the "remove the chip at position A ie: the
freeband resister" mod that will not work anymore. My question is.. will
the solder pad/Ingra-Beton software mods still work for the third
generation FT-50?
Paul

To extend for wide band receive.
Hold down Func button for all the following instructions....
press KL/PL button 3 times
then press V/M button
then press CALL button
then press A button
then press KL/PL button 1 time

the display will now show OPEN.

On the European radio, this will give 118-174Mhz (approx) rx and tx, UHF rx
and cell phone rx

have fun!

>The subject says it all.
>
>Just picked up an IC-211. Looking to see what others think of it.

I liked mine. The stock radio has a pretty dismal noise figure,
but the Mutek board fixes that. It doesn't have provision for
narrow filters or passband tuning like newer radios, so an
aftermarket DSP box can be useful. But otherwise I liked
the way it worked. (I used it for Oscar 10.)

>Plus I am looking for a manual as well as a service manual.

There was no separate service manual, but the owner's manual
doubled nicely as a service manual in the tradition of most older
amateur gear. I'm sorry to say that sort of manual has become
a thing of the past.

>BTW: has anyone had one of those Mutek ltd. replacement boards
>installed (RPCB 251ub I think..) in their IC-211?
>
>What diference did it make?

I put one in mine. It made a *dramatic* difference in the weak signal
performance of the radio. It brought signals that were buried in the
receiver noise up to armchair copy. This board is a must for any
IC-211owner who wants to hear weak signals. It puts the radio on
a par with the much newer IC-275 in terms of noise figure (but the
IC-275 is still nicer in other ways, that's what I have now).

From: Graham Galbraith <no.spam.graham.galbraith@virgin.net>
Message-ID: <35245313.B95@virgin.net>
Source record: 148387

Hello, if you're reading this you may possibly remember
my original query re: A recently acquired Kenwood TS-
50S which was going straight into TX when CW
mode was selected, or when a memory channel with
CW programmed as the mode was selected.

An additional quirk (which I didn't know of at the time I
posted my original message) was that memory channels
could not be programmed, because the M.IN button was
not working properly.

BOTH of these faults were caused by a bent switch
contact in the CW key socket which I have replaced
today. The second symptom is quite baffling, but the
logic presumably does not allow memory channel
programming while it thinks the radio is in TX.

Thanks to all who were kind enough to reply to my
original query.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hello All,

I live in a very old part of town, houses are 100+ years old. I'm not sure if that has anything to do with my problem but still. I cause TVI.. I have my Rig turned down to 2.5 watts running into a 15 Meter dipole with swr 1.1 to 1... But still on CW it pulls the picture from my TV, and everyone around me. SSB I can't even use because it destorys everything...
I don't have a low pass filter, looking for advice on which one I should get, I may or may not need to work on my ground (would that affect TVI?), I can want to use a tuner so I can have multi bands on one dipole, hope to use a 40 meter dipole for 40-10...I never plan on running more than 5 watts out...
Radio is a TenTec Argo 556, powered by a Pyramid Phase III 12 Amp Power supply, Tuner is a MFJ 949C, but I cause TVI with out the tuner in line...
I live in an area that is filled with InterMod on vhf, I have all the tv, radio, pager, wireless cable, business band and whatever is radio, towers within a mile of my house.
I have to fix it on my end, the people that live around me 100% will not do anything to their end, they say if I don't transmit they don't get the TVI, which I'm okay with that once I'm 100% sure I'm doing everything I can on my end....

Thanks for any advice...

73,

Jim -- KC4SMH

Hello Bob,
I like mine alot!!! I have the low power version, just different battery.
A couple things I don't like about it. On six meter the rubber ducky is no
good, but you know it's a rubber ducky so I understand that. It's still
odd, I do much better on 2 meter simplex than I can on 6. I was looking for
a dual band handheld in this price range, I got this because of the bonus of
6 meter and the wide receiver.
I use it to check into the 6 meter net every sunday so it's working out
well.
The charging system I don't like at all. You have to have the battery
attached to the radio to charge it, I don't know but they must make an
external charger or something. I don't really like the SMA Antenna
connection it's really weird and was a pain at first to hook up to external
Antenna till I found sma to bnc attapter....It's a new radio and once I get
another battery and way to charge it with out the radio I think I'll then be
99.3% happy with it...

73,
Jim

ADI / PRYME SALES BULLITEN
2 April 1998

PREMIER COMMUNIATIONS ANNOUNCES TWIN 6 METER / 220 HANDHELDS

Amateur radio manufacturer PREMIER Communications, the maker's of ADI Radios, PREMIER Speakers Mics, and PRYME Battery Packs, announced two new handheld radios today: one for the 6 Meter amateur band and the other for the 222 MHz band.

These "twin" HTs feature the same cosmetics. They are small, compact units similar in size to the Yaesu FT-50RD. Each unit features a full 5 watts out with the supplied NiCad battery pack, 40 memory channels, and built-in CTCSS encode and decode.

The model number of the 6 Meter handheld is the "PR-52" and the 1.25 Meter unit is "PR-222." Both units will be available as soon as they become FCC type accepted, sometime around the end of May. The units may not be offered for sale or lease until after the approval of the FCC has been obtained.

The radios will be marketed under PREMIER's new "PRYME Radio Products" brand name. No price range has been announced.

For more information see the PREMIER Communications website at <http://www.adi-radio.com>.

215. Help w/repair RS HTX-404

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-02 00:00:00 UTC
From: fbern@teleport.com
Message-ID: <3523e383.4474467@news2.teleport.com>
Source record: 148396

I have a Realistic HTX-404 70 CM Amateur UHF FM Transceiver.

I receive a " Er2 " error when I turn the radio on.
The manual states:

"Er2: PLL Unlock Error
Er2 indicates that the HTX-404's PLL section has unlocked. Have the
HTX-404 repaired by an authorized Radio Shack repair center."

I am sure the fix is a simple procedure.
Anyone ever come across this problem, and know how to handle it?

Thanks,
Frank.

Source record: 148398

Hi All

I have a Icom u16t handheld which was converted to
70 cms by icom. It would be really be handy if i could get this working
on the srbr freqs (461 ish) . Trouble is this would mean a reprog of
the eprom, even worse this is a non standard weird four sided object.
Does anyone have a ordinary u16t ? can new freqs, ctcss be entered from
the keypad ?(i have been told that the u16 and u16t are different).
Will it cover up to 461.4875 and which subtone is used on this freq ?. A

friend has offered to reprog the eprom but needs an adapter to cope with

4 sided eproms. Anyone got a dead one ? the chip could still be ok.
Don't want much do i !. Thanks in advance for any help.

A low pass on your output couldn't hurt. They don't rely on ground, so that's not a problem.

Is it on specific channels only, or many? I'm wondering wether you have a problem in the rig outputting excessive harmonics, or something else is going on.

You want that lowpass to start rolling off above the highest freq you will use, but it won't help a lot on low VHF channels. They are rated with a cutoff freq (3dB down) and some number of dB per octave.. Say your cutoff is 30 MHz, ok, at that point, the output is attenuated 3dB. At 15 MHz, we might expect 1.5dB(!) At 60 MHz we look at the rolloff number, maybe 12dB, so we would expect 15dB attenuation (3 at cutoff, + 12). So in the low VHF you don't get a lot of help from a lowpass.

Once you get up to 180 or so, we are 6 octaves out, and you are getting 63 dB+ (hopefully) attenuation, and some real benifits.

For problems in low VHF (cable converter outputs are on ch 3 or ch 4) then you can hopefully trap it out with a series resonant notch filter, or shorted coax stub. This is a piece of coax 1/4 wavelength at the interfering freq, multiplied by the coax velocity factor, usually .66, "tee" connected to the line, and open on the end. They aren't very broadbanded, so cut long, and tweak it down.

Series resonant LC traps are smaller, but maybe harder for you to get parts for.

A ferrite on your feedline at the transmitter end, and another on the antenna end may help too, trying to keep any energy off the shield.

Good luck!

> Do you know the diode number?

NO, but it's position :)

Take a look at the led.

just below and a little right you will see a couple of diodes,
single (not double) simple diodes, they have a sign "A".

A couple of them are inserted and a couple are not.

This group of diodes is only to make various restrictions
in TX/RX ... for differend bands, I have removed them all :)
I had only 2 inserted anyway, one for the Wide 50MHz
disable and the wide RX disable.

The diode to open TX in the 50-76 MHz band is the bottom
Horizontal, most right diode.

If you remove it you will get TX 50-76MHz, it will tx
(according to my Optoelectronics Scout) from 50 to 65MHz,
usefull with almost constant power up to 58MHz and then
dropping and dropping, at 65MHz it is a couple of miliwats.

Greetings, ...

Source record: 148428

Thanks to all who replied. The following have been suggested by various people:
a.. SRH815-Diamond available at AES supply
b.. Comet and Diamond both make them, but they are not much better than
a dummy load. I would recommend the Comet SMA-503 antenna tho--it is a
couple of inches longer than the stock antenna, but it is EXTREMELY
flexible and thin (3mm!) and has a base about 1 inch tall. Of all the
antennas I have for my HT's it is my favorite. It is very broad banded
also. You can make a small rubber spacer to fill in the gap between the
rig and the bottom of the antenna that is normally filled by the rubber
skirt on the stock antenna. (Maybe an O-ring?)
c.. DIA SRH805 DIAMOND 2M/440/1.2 1.75"SMA AN
CMT SMA501 COMET 2M/440/900 1.5" SMA ANT
The're not gonna have good performance compared to long Antennas however!

d.. My favorite reply was: Yaesu antenna that is used on the VX-1R or Icom makes a short smooth SMA antenna that will work on the 50R.
I'll take a look at whatever's in the store when I go in, but sounds like the VX-1R antenna may be the one!
Thanks to all -

I had the same problem with my DX-70 (intermittent and noisy audio with
pressure on the pots). One day the audio just went full blast. I also had
problems with the RIT control.

The problem was bad solder connections on the connector CN1005. After
carefully resoldering I have no further problems.

But I would tend to suspect all those little connectors in case of further
intermittent difficulty. There must be quite a few of them throughout the
radio. I would hate to have to repair one of them on the main board though.

Some RF engineers I know were talking about a "Reference Frequency" when referring to FDM and FDMA. What is it? What does it do? Why is it needed? Any help in this would be very appreciated!

Thanks,

Mike

Tower for sale U.S. Towers
Tower For Sale. My friend is a ham who just passed away. He had just ordered and
received a U.S. Towers 70 foot fully motorized crank up tubular tower. It includes the
indoor control box to raise and lower the tower automatically .It is brand new and was
not installed. He paid $6000 + shipping. His wife would take $4000. You can call me at
516 486 1861. We are in New York on Long Island. KB2VX Rob. Thanks 516 486 1861 qin2@aol.com.

242. Alinco DX70T Experience?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-02 00:00:00 UTC
From: agiroux@cvn.NET
Message-ID: <3.0.5.32.19980401214424.007ae220@mail.cvn.net>
Source record: 148436

Just bought one at the Maryland State Convention. It's great. I was able to 'hands-on' compare the DX-70, TS-50, and IC706.

I was buying a radio primarily for mobile use that would fit in my Ranger Pickup. I wanted a good radio with a good receiver and with a panel that wasn't to busy for operating in traffic.

The IC706 is a great radio, but for mobile it is just too busy. Plus that it was $1125

The TS-50 is also great and it wasn't as busy as the IC706., It didn't have the 6 meter capability, but that wasn't THE deciding factor. It cost $785 ("hamfest price").

The DX70 has a front panel that is just right for mobile use. 13 knobs & buttons. Some settings - what I call 'set & forget' are inside the radio. Sidetone volume, Mic Gain, selecting 100 or 50 watt output, etc. One setting for PL Tones is a dip switch on the bottom of the rig. If you're planning on a lot of 6 meter repeater use and need many PL tones, this is a minus. The 'hamfest price' was the best of the lot -- $735.

Like I said, 6 meters wasn't the deciding factor -- ease of use was. I'm sometimes on the road during commute times, and I didn't want to fiddle with the radio while driving. I got the DX-70T which only has 10 watts out for 6 meters. The DX-70TH has 100 watts out for 6 meters but ran an extra 100 bucks.

You may get answers from some nay-sayers because this radio might miss features in the latest DC to Daylight rigs. One thing I noticed while surfing the usenet groups is that you won't see many of them up for sale. That means that folks who have them like them or Alinco isn't selling any of them. Alinco is still selling them like crazy, so something must be right.

If I hadn't found this radio at the show, the nest step was a TenTec Scout.
As I add up
the cost of the Scout, plus the band modules, plus the accessories -- then
look at what
I got with the Alinco, the DX70T is the better buy.

243. Icom IC-W32A dual band ht new for sale.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-02 00:00:00 UTC

Source record: 148437

Hi there
I have a brand new ICom IC-W32A dual band ht for sale.
It comes with the following accessories:

CP-12L filtered cigarette lighter adapter for 5 watts out and recharging
battery.
HM-46 speaker microphone.
instruction manual.
warranty card.
original box.
BP-180 battery for 3.5 watts output.
CSW32 programming software.

HRO price for the lot is a little over $400. U.S.
Shipped insured to your door for $300. U.S.

For the full specs, a mini review and mods, see my temporary web page at
http://207.35.13.100\ham\index.htm

No hardware mods have been done on the radio.
Reason I am selling is that I need money to buy an hf rig. If interested,
please contact me by email.
Postal regs forbid c.o.d. shipments from Canada to the U.S., we can arrange
something.

Had the same problem, company called Digi-Key makes a replacement part to fix that runs about 2-3 dollars by the time you ship it, by the way this is the first realistically priced 733 on the group in a while!!!!

800-344-4539 is the company's number, at least that is what my scrawling in the manual looks like!

Spoke to a Ham this evening. He was on an 847. While he just got it today he said it was a good performer on 2 & 440. Said the preamp brought me up from an S3 to an S9 without bringing up noise!
Also said it was good with intermod.

Of course he only had the rig a few hours and was pretty happy to have it.

He had not used it on HF or 6 yet.

251. Re: FT-847 Overpriced!

The rigs go for a premium when they are inroduced.

In a few months the price falls a few hundred.

Gxuess you have not figured that out yet.

Hi there
For the full specs, a mini review and all the known mods for this fine radio, go to a temporary web page I have set up. I want to sell this radio and people are allways asking a lot of questions about the radio. I try to answer them all on this web page. If you want to buy the radio, which is brand new and comes with a filtered cigarette lighter power cable, speaker microphone, warranty card and instruction manual, the asking price is $300. U.S. The retail value at HRO is a little over $400. U.S.

No hardware mod has been done on the radio. I am selling because I need money to buy a new hf rig. Contact me by email if interested.

Web page for info is http://207.35.13.100\ham\index.htm

My email is morinm@csgoeland.qc.ca

Try a 100 ohm load. At 10 ohms and, say, 10 volts, the current would be 1 amp!!
A little steep!

Be careful when using such a small resistance for a load on one of those wall transformers - some have internal fuses. NON-replaceable internal fuses!!

Regards,

Bill

The third generation of the FT50 just came out a couple of weeks ago. The trick shown in that URL doesn't quite work any more. After the modification, you can get into the programming mode, but you can't change the -A1- to FREE anymore. What a shame!

In article <6ftem9$37e$1@alice.walrus.com>, marc_k wrote:

Bill. What do you mean by the reference to the FT736R? I would hope this radio is superior to the FT736R. I have a FT726R and my good friend K9WK has a FT736R. We talk at length a couple times a week on 2 meter ssb, and both complain about the poor receivers in these particular Yaesu rigs. On two meter ssb a strong 59++ signal can cause receiver trash 20khz away. QST also found this on their test of the FT736 where it was particularly bad on 430. Have you found the FT847 to be much better in this regard? Thanks for any info. ---- Steve N9ROU

Marty:

I have an FT-736 from Yaesu that does the same thing you are
describing. The radio passes the international regulations for radiated
emissions as an intentional radiator, but does NOT pass the "conducted"
emissions regulations. The problem is in the switching power supply
filtering scheme and is ultimately generated by the flourscent display
on the radio. The interference is conducted through the line cord. If
I take a clip lead attached to an HF radio antenna port and hold the

other end near the fl. display on the FT-736, I get the SAME sounding "buzz saw" as through the line cord. The problem is that the international regulations stop at 30 MHz for conducted "radiation" and START at 30 MHz for radiated emissions. The conducted filter must be most robust at the low end of the spectrum - nominally around 150 kHz. The components in the filter typically are "on their way out" at the high end of the HF spectrum. Yaesu, as well as Sears, did a typically bad job in this respect. Yes, as many turns of the line cord of the TV AND the transceiver around separate big ferrites MAY do some good. Good luck.

Dave - W6LEV

PS: and Yaesu should know better!

Source record: 148217

If the Waters you refer to is the manufacturer of the line of Ham
products of yesteryear, the current address will be of little help, because Bob
Waters sold the product line to Barker and Williamson years ago. He then sold
Waters Mfg, Inc. They are still on Rte 20 in Wayland, Ma. on the
Wayland-Sudbury town line.
Bob Waters is a silent key, about two years ago.

>>>>>>>>>>>>>>>>>>>> <<<<<<<<<<<<<<<<<<<<<<<

I once owned an IC211 way back when they were a new radio. I used it
for weak signal work. Yes, it REQUIRES a good preamp. Now, let's talk
transmitter, mainly, the synthesizer. Using the radio for weak signal
work, I had a pair of 4CX250B's on its output when needed. They have a
gain of just over 20 dB (biased properly). I could never understand why

other hams in the area (radius of roughly 50 miles) complained of "birdies" every 10, 5, . . . kHz (even, heaven forbid, outside the band). The birdies were weaker by the gain of the "afterburner" when it was out of the circuit, but they were still there. Well, it turns out, the IC211, contrary to popular belief of the time, was just another FM radio with SSB and CW tacked on for good measure (and price). On the narrow bandwidth modes, Icom did NOT shut off all the frequencies the synthesizer used to accomplish the smallest tuning step on FM. Even though the narrow band modes did not use them, whenever some gain was "attached" to the output of the transmitter, all these "PLL" frequencies were amplified as well. And, remember, if it is there on transmit, the PLL also serves as the receive LO, and will admit all the "stuff" on the "birdie" frequencies as well as the main LO frequency, like LO noise. If you want the radio for FM, it gets a qualified "OK". But for SSB/CW and general weak signal work, continue to look.

Greetings!

Thanks for taking time to help. I'm trying to figure out how to mount either a tm621a or a ft-2500 in my Saturn. Not sure the best place to pick up the power, preferably inside the passenger compartment if possible.

Really don't know the best place to mount the unit, does anyone know of an adaptor kit for in dash mounting?

Any neat suggestions for mounting the antenna and running the cable?

Thanks so much!

Craig WB0QQE

A question for users of amateur VHF/UHF/dual band handheld portables in urban areas. Please describe your experiences in using a portable radio in a high "intermod" environment. Which radios have demonstrated good performance and which have performed poorly? Have you ever changed your radio in order to obtain a radio with better performance? Do any radios stand out as exceptional performers?

Regards,
John VE3JTP

I think there is either something wrong with the MH-1 hand mike or the audio input stage in the 840. Usually, these rigs sound fine on the air. See if you borrow a mike from another ham and try that before you spend money on a "power" mike. If you still get poor drive, then check the mike input stage.

I am looking for a Geochron world time map clock. Its the large backlighted moving map display that shows real-time and daylight/darkness terminator displays for the world. Prefer one of the higher end models but will consider any that are available on the used market. I am an immediate BUYER.

Please e-mail, or call anytime; 561-883-1408.

Keith

give me more specifics, like what is the model number, but that isn't
going to tell me what part of 136-174 it actually was built for,
chances are it is on the 150.2 to 160 mhz spread unless it is from
canada and then it is probably on the 136 to 150.2 split, but tell me
more on the model number , it will be something like t53jja3900ck or the
like...

He didn't say that. He said they make between 8 - 12% gross. You
obviously feel they should make less. You obviously have never tried to
survive in the retail sales business selling to people like yourself on a
lousy 10% markup.

308. TenTec Mike RF problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-03 00:00:00 UTC
From: Craig and Gloria Novak <craig_novak@abraxis.com>
Message-ID: <35258FCC.44D0@abraxis.com>
Source record: 148254

Thank you for reading this.

I have recently purchased a Ten-Tec Scout 555 with a 40 meter module. I have also purchased their SSB mike f.u.w. the scout. However, when I transmit, I am getting my voice (distorted)back through the unit and I am hearing it in my earphones.

TenTec support is closed right now for the weekend, so I am wondering if anyone else has had this problem with this unit. I have place two large RF choke devices on the top and bottom of the mike cord with no change.

Any help appreciated.

It won't keypad program. Use the up and down and go to the frequency you
need and save it. The keypad is only for DTMF generation

I don't believe I've ever seen an SMA->PL-259 adaptor in
over 25 years in RF engineering ...

That would be sort of like grafting some gorgeous girl's
face onto the body of a pig.

I looked in several catalogs and couldn't find one, either.
(I found that reassuring ...)

Suggestion
1st: Go to your local ham radio store and buy the best low pass filer
then have. Unfortunately, price defines quality. You want as many
filter sections, the the filter, as you can get.
Connect filter as close to transmitter/transceiver as possible.

2nd: Try staying away from hf bands of which their harmonics lie in
the channel used by your local cable company to feed your tv set, eg
channel 3 or 4.

3rd: If the interference is getting into your cable system, before the
cable converter, the problem could be in the cable system, then it
'may' be the cable companies fault. Don't jump on their tail untill
you can prove, and demonstrate, that one.

Message-ID: <3524EDA2.83951B16@jove.acs.unt.edu>
Source record: 148324

It sure is. This rig used a VFO, and they are notorious about drift.
However,
100 hz is FINE for any VFO during warmup. There were some mods
to stabilize the VFO on the 120-130s, but at 100hz during warmup I wouldn't
even bother. 73, Walt
BTW, my Collins Kwm-2s have the finest VFO (pto) ever built and they
still drift more than that during warmup (15-20 min) but stay rock solid
for DAYS after that.
GOOD DAY!

Message-ID: <3524F459.DD6EB06B@erols.com>
Source record: 148326

Now have for sale three Prevailer gel
batteries. Two are the 4D size and one is a regular size 27. Estimate
the 4D's have at least half their life left. Estimate they have had
about 70-90 discharge cycles down to 50%. Rated life is 350 to 400 FULL
discharge cycles. At 50% this value will usually double. Have always
been maintained and monitored by multi-step chargers and monitors from
Ample Power Co. They are in the BEST condition a battery can be in.

If you know anybody that would like a good deal on these, send them my
way. Am asking $100 ea for the 4D's (New price is $375 West Marine) and
will give back the money within 48 hrs if not happy. If not familiar
with a 4D, it is a 180 amp-hr battery. 130lbs. The group 27 has NEVER
been used. Just maintained on float charge. It's a 90 amp-hr battery,
asking $75 (New $160).

Perfect for field day or emergency use.
Local to the Washington D.C. / Baltimore area.
Please e-mail your phone # and I will call you to give you more info or
to arrange to get together. I travel
a lot so it may be a couple of days before I return your call.

T.O.

I think this is the "boy, are we spoiled" thread.

Radios have gotten so affordable in the last 20 years that we expect the manufacturers and distributors to sell them at no profit.

Remember the days when the only commercial gear was affordable by only the very rich hams? In those days you had to build your own transmitters.

Yup -- those rotten, greedy Japanese manufacturers have sure spoiled us poor hams. How dare they??

Phil

Hi Jim, Can you be a little more specific on the interference? What does it look like on the tv? What channels does it come in on? Are the sets on cable or receiving off the air broadcasts? Do you have a dummy load? If so, what happens when you use it? Do you still get into the televisions? Lots of good advise so far but I would suggest you try to narrow it down to a specific cause before you try the shotgun approach.

354. TV Interference to HF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-03 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <3524e8e5.64682268@news.supernews.net>
Source record: 148337
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

My dad has an odd problem with interference on 17m apparently coming from his television set - it took several months to figure out what the cause was, becuase the TV is almost always on.

While the TV is on, he has about an S5 to S7 noise level (sounds like a buzzsaw or something, worse at night then in the daytime) on 17m; 15m and 20m are both clear - drops to nothing when the TV is off. Noise is present throughout entire 17m band.

Apparently is coming in through his HF antennas as there's no noise when the antenna is unplugged. Dad operates almost exclusively on 17m so this is a real problem for him.

He lives in a rural area and has Primestar satellite and an over-the-air TV antenna; he disconnected both of those from the television but still the noise remains. The TV is a 35" Sears model, he says it was made by RCA for Sears and is about 5 years old.

My guess is that there's RF being generated from the TV into the house wiring; he's checked all the plugs on that AC circuit and everything is grounded properly.

Any suggestions as to how he might clean up this noise? I suggested a brute-force AC filter at the TV, but he may have a hard time coming up with one of them because of where he lives. Somehow I don't think ferrites on the TV power cord are giong to do much.

Thanks for any help!

> (I found that reassuring ...)

They exist. A local electronics house stocks them... I usually take a handful to any hamfest so when someone sees mine I have spares to sell 'em. I wish I could get a wholesale price on them so I could sell 'em for a reasonable price at hamfests, but I don't know where they get 'em. I do know that they have two different sources for them.

Well, for the record: I ended up buying a "beeper case" in a local uniform
shop. It was made by "Duty Man" and is a black utility case used by law
enforcement to carry beepers. I have used it and it works well for what I
wanted. Best of all, it protects the battery from the elements and is hand
to clip on to any belt. Thanks for the ideas.

Yeah, it's the same board. There is also a board for the IC-271 (different).
I got mine direct from Mutek, but I notice that SSB Electronics USA is also
a distributor. They still list the board for the IC-211/IC-251 on their webpage,

>You might want to make sure that 430mhz covers the frequencies you
>want to use. I could be wrong, but most uhf repeaters are 440-450mhz.
>The 847 as is isn't supposed to go there, rather 430-440. But then I
>don't have one of those.

Yep, You're wrong Steve. The radio goes to 510MHz. Seems like alot
of people are giving their opinions, rather that reading what the specs
of
the 847 is. I own one, and it does everything it says it does. All
bands
have really hot receivers, and each one has a preamp, along with DSP
NR and D. Notch filter. Some people on this list have even bought one,
and then complained about the radio not having some feature they
wanted. I call this a poorly informed consumer, and not doing your
homework. Don't knock the radio if it doesn't have something it was
not advertised to have. Although, I've only had the radio a short time,
I have not come across a glitch, or anything that did not work or preform
properly as the manual explained. BTW, the manual is extremely well
written, with only a couple of typos that I have come across. It's not
a FT-736, but doesn't claim to be....it's not a FT-1000, and doesn't
claim to be. It does work as well as my TS-850, and for my part is
a very good product, in keeping with Yaesu's reputation. I also think
the price is fair for what the radio is, and does. I'd buy another one
again if I had to make the choice again. Just a side note, I worked
over 15 European countries the first couple of hours I had it, all
commeted
on the good audio...did not use the amplifier and all signals were 5x9 or
better. The split frequency worked great on DX listening on a different
frequency. I've owned a lot of radios, going back to the late '50s,
both
good and bad, and I think this is one of the good ones. It may not be
for everyone, but I think it has it's place. Just my $.02 worth.

367. Re: Can an FT-50 TX on 800MHZ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-03 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6g39k5$j2g@redgreen.cs.ubc.ca>
Source record: 148350

iammik@earthlink.net writes:
>Is there a mod out that will allow TX on 800 mhz?

No. If you look at the circuit diagram, the FT-50 has three RF front ends, for VHF, 400 MHz, and 800 MHz. But there are only *two* RF power amplifiers, for the two amateur bands.

Another good thing about the MAHA charger is that it has a temperature
sensor. Apparently delta-V sensing is unreliable for detecting end of
charge in some NiMH batteries because the voltage change is so small.
Temperature sensing is necessary to detect end of charge reliably.

This is a long shot, but if you have one of these, I'd pay $125.00 for
it. The 1544 is an adaptor box that plugs into the Drake R-7
receiver's accessory plug. This allows you to use the Drake
RV-75 synthesized VFO with the R-7 receiver. My problem
is that I have an RV-75, but no 1544 adaptor box. If you
have one of these that you're willing to sell, please contact
me at feinstei@ford.com. Thanks!

I have a Fullerphone Mark V dated 1944 it makes a great code practice machine I am though lokking for any information at all on this thing including trying to find a copy of the opp manual. any help would be greatly appreciated. below is all i have thanks

lutzr@fwbnet.com

In the summer of 1915 it was discovered that the Germans were listening to allied telephone conversations. The Germans had, inadvertently, discovered that telephone conversations could be picked up courtesy of the earth (or ground) return of the single wire telephone circuits then in use. Buzzer signals could be detected at distances up to 300 yards and speech at 100 yards with only rudimentary equipment from enemy front line trenches. German listening posts were soon routinely intercepting front line conversations at ranges of up to 600 yards. The Allied discovery that messages were being intercepted, albeit by means unknown, led to the remoting of "earths" or telephone circuit grounding points from 100 yards to, by 1916, 1600 yards behind front lines, use of twisted cable, elaborate codenames and unit call signs, and to the development of new equipment to defeat such interception. Unit identities, names of officers, locations and timings became prohibited subjects for electronic transmission, backed up by court-martial action against offenders. For the Canadians this was their first introduction to "electronic warfare". Interestingly enough, the secret of how the Germans were listening in was finally solved in 1916 by Sergeant Lorne Hicks of the School of Signalling in Barriefield, Ontario. During a morse class Sergeant Instructor Hicks discovered that his wireless equipment was receiving a signal from a low tension buzzer unit some ninety feet away. This led to scientific investigation of this curious phenomenon and corrective action. The fullerphone (in production by 1916 and in use in brigade headquarters by 1917) used a direct current morse signal sent out by this telephone's buzzer and vibrator to effectively eliminate signals which permitted enemy interception. The fullerphone was used until well into World War II.

In February 1916 listening sets or amplifiers became available for the allies to eavesdrop on enemy telephone conversations and to monitor allied telephone security and an allied listening organization was set up. This "electronic warfare" organization was originally controlled by a General Headquarters Inspector of Listening Sets but responsibility for this work was delegated to corps headquarters in late 1916. Security became a major Canadian concern. With the 1917 adoption of the Fullerphone at brigade level allied transmissions became more secure. This phone had a morse key which utilized a small direct current for transmission of its morse signals rather than the alternating current used by buzzers and telephones, making it much harder for the enemy to intercept. When used as a voice telephone, however, the Fullerphone had no advantage over other models, an aspect often

overlooked by users as late as World War II.

You have to put a resistor parallel with the mic.....about 1.2k or so.
Thats the only way! There is no mic gain control on the radio..
Yes it IS too hot!!! and reducing deviation will NOT help...
your mic will STILL be too hot..

385. FT-847 SAT and HF reveiw Part II

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-04 00:00:00 UTC
From: John Gordon <xlr8@worldnet.att.net>
Message-ID: <6g6bsk$lne@bgtnsc02.worldnet.att.net>
Source record: 148120

I got a lot of positive feedback on my first reveiw so
I thought I would add more as I worked more Sats with the
FT-847.

Mode B AO-10 : Already dicussed in Part I

Mode A RS-12 : Mode A is 145 MHZ usb uplink and 29 MHZ usb downlink.
My equip on Mode A is the FT-847, 20X element beam
controlled by the computer running the "STATION"
program.
The Downlink antenna is a homebrew 10M turnstile. I set
the
radio to 20 Watts out and answered A CQ RS 12 from
Rege...
WA3LKT in Silver Spring,MD FN19. I am located in FN30 on
Long Island,NY. Rege gave me a 5/7 report and I gave him
the same. I asked him about the audio on the FT-847 and
he
said it sounded "natural". In this mode I use the VFOs
in
TRK-NOR or Normal Tracking. When I want to move up and
down
passband I simply move the Downlink VFO (or main dial)
and the
Sub VFO follows. Then when I correct for the doppler
shift
the SUB VFO acts indepenent of the Main. This is very
handy
and the 847 does it well. I am very happy with the
performance
on Mode A as this is one of my favorite Modes. Rege and
I talked
for about the whole pass as I was only his second SAT
contact.

Mode J FO-20 : Mode J is 145 MHZ up and 435 MHZ down. On Mode J I use
the
20X element on the uplink and a 30X element on the
downlink
. My first contact with 847 on mode J was KB8UHY...Steve
in
EM79. Steve and I talked most of the pass and I noticed
with
the Internal 10db preamp on the 847 I could hear the SAT
right

down to the horizon at abt 3 deg with no problem. Steve
gave
me a natural sounding audio report and we cleared when
the SAT
hit the horizon. Performance on Mode J was very close to
my 736r
with the external 10db preamp I use to use. On this mode
again
I only used abt 20 watts as I foung this to be enough.
The 847
has a cleary marked wattmeter on the front panel that is
easily
controled by the RF Power control.

AO-27 Mode J (FM) : AO-27 is a popular FM satellite. Uplink is 145.850
FM and
436.800 FM Downlink. My equipment is the same as Mode J
above.
AO-27 is very crowded on weekends so it was tough to
make a
contact today. I did hear my own voice once or twice
when the
Activity on the SAT dropped during the Noon pass today
(Saturday).
Didnt make a contact today but did make a discovery abt
the 847.
When xmitting to the uplink with the receive preamp on
(internal)
I was getting some crossband splatter on the downlink.
If I turned
the internal 10db preamp off that problem cleared up all
together.
Preamps tend not to help anyway on FM (they do not
increase the S/N
ratio) so I left it off remander of the pass. I was
fairly happy
with the radio on that mode of operation. The FM
Discriminator Meter
came in very handy . All I had to do was watch that
little LCD dot
on the Disc Meter and keep it in the middle buy turning
the main dial
VFO.

Internal DSP : The internal DSP works quite well. I also have a Timewave
DSP-9
with the new version software that I use on every radio I
have.
The Timewave is on the speaker output of the FT-847 so I
can do
an A/B comparison between that and the internal DSP. The

Noise
Reduction on the 847 works well but you must go to the
Menu and
adjust it to the level you like. Once adjusted though its
set and
forget. The Digital Filter on the 847 works very well and
you can
adjust its width down to 25HZ. The Digital Notch works
and is fairly
quick at knocking out hetrodynes. I must admit I am
tending to
favor my DSP-9 though. I like the way it sounds in NR and
its
Press and forget (No Tuning).

HF Contact 17M : Made one HF contact so far with the 847. My antenna on
17 Meters
is a ground mounted R5 vertical. With the 847 running
abt 100 watts
I spoke with Dean...NO5E in oklahoma. Dean gave me a
5/5 and I
5/6 and we spoke for abt 30min before the band started
to go"long".
During this QSO I could tell the radio was very stable
(very little
drift if any) and it stood up well in a crowded band.
We had strong
stations either side and I was running the receive
preamp and the
noise blanker and the receiver did not "Cave in".

Quirks and Odittys with the 847:

1) The radio has a 12v DC Power Cord that has TWO
conductors
on the Plus and Minus side of the cord. The conductors
are
of abt normal size you would see on a 100 watt radio.
These
wires go to two BLADE fuses at the end of the cord
insead of
in-line fuses. I can only think they used two conductors
per side to cut down on Voltage Drop across the power
cord
during full output. It works, as the Indiglo Blue
display
never dims during modulation.

2) The radio's AF output control that controls speaker
volume
goes up and down in little steps as you move it. Its

almost
as if they are controlling the volume with a Fly-by-wire
approuch.
I think the volume control is controlling a dc voltage
that controls
a digital circuit that in-turn actually controls the
volume.

I programmed in all my favorite Out of Band Utility stations
(police,Air
and Fire) and am still finding the radio very sensitive. I can hear the
Tower at Kennedy Airport with no problem with the preamp on. Something
my Radio Shack 2006 had trouble doing on the same antenna. I am still
very
happy with the FT-847 and an still using it as the main radio here in
the
shack. 73 all.

Robert,
stay with the Larsen on glass.....they are much superior because
of their design....

MOST on glass antennas are high impedence...(High Z)....
Larsens couple through the glass at LOW Z.....this makes
the element length the true length (1/2 wave) where others
have to start INSIDE the glass and that can cause problems now
that the GLASS is part of the antenna....not the feed!...
Any object brought into the near field of the glass can cause
problems in a high Z field....Low Z tends to ignore outside
disturbances!

I tested Larsen and other on glass antennas at my former job once
on a makeshift antenna farm.....the high Zs at one point where
20db lower than a true 1/4wave antenna on top of the vehicle!!!
Larsens had superior signal strength (used a spectrum analyzer with
a pad on the front for measurements)..

Also to answer the one about lowband.....DONT!!! The only lowband
on glass made is a joke (Avanti).....The glass gets warmer than the
antenna does at 100watts of RF.....my former company bought over
$600 of those things; we threw ALL of them away after 2 weeks of
testing and TRYING to make them work.....and went back to drilling
holes for SN48s and LMO48 antennas!
and lowband low Z antenna? Asked Larsen about that....they laughed
and said "you know HOW BIG the inside foot would have to be for
that????" Hmmmm good point!!!

73
Chris
WB5ITT

My professional opinion? Run a TRUE 1/4wave mounted on a ground plane
of metal if you can (roof mount is best) or a 5/8wave on the trunk
if need be....if you can stay away from any onglass, you're better off.
BUT if you have to run onglass, go with a Larsen....
BTW I DONOT nor havenot worked for them!

Do any of your radios know what day it is? None of mine have any idea of the time, day, or date, so there is no plausible way that a change in the current year would affect them.

If you do have radios that know what year it is, then quite possibly they'll do something inappropriate when 2000 arrives. Most likely, they will only screw up the date, though - other functions will remain unaffected.

There is a slight chance that the year change will completely screw up the operation of the unit, but it's not very likely. If you're really worried, set the radio to the last day of 1999, wait for the date to roll over, and see what happens.

Dave

Actually, if you compare the Icom T8A's antenna with the Kenwood TH-G71A dualbander, you'll find that the antennae are just about the same length. The antenna probably seems big, because the radio is so small. (Fits perfectly in my hand.)
By the way, the high-power/low-power radios are the same, batteries are just different.

402. ADI AT-600 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-04 00:00:00 UTC
From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <3526D7E3.7078F610@mtu.edu>
Source record: 148137

I have an AT-600HP, and I have be3en having a small problem with it.

In UHF, the repeater offset keeps setting itself to 8.805Mhz, and every couple of days it will set itself back there, even if I change it to 5.00 Mhz. When I take the battery off, and then put it back on the next morning, the offset it usually just how I set it, at 5.000. But, sometime during the day today (during an antenna party no doubt) the offset mysteriously went back to 8.805 Mhz.

It doesn't do it very often, and I would just set it back every once and awhile, but I haven't found any way to change it other than turning the channel knob- many, many, many times. It takes a couple of minutes of constant turning just to set it right.

Any help would be appreciated, any questions can be directed to me via my e-mail address, or just post it to the group.

Thanks,

Chris Buckley

I'm using a 2-meter HT ham radio with an outside Discone antenna on a 10ft poll. I realize they should be grounded for lightening protection but I need to find out if static build-up is a threat to my radio and would I want to ground my antenna just because of static since the set-up is temporary and I take it down when I'm not using it. Would an insulated wire J-Pole antenna pick up any static at all?

Vince,

If the 28 is like the 38 (which I have used), you can only have three PL tones saved. Apparently there are three PL memories. These can be associated with any of the repeater memories -- which is useful only if there is a lot of repetition.

If you are in an area where the repeaters are not PLd, no ploblem. Otherewise ...

I have for sale two Kenwood all-mode mobile transceivers. A TM-255 2 meter rig and a matching TM-455A 440 rig. Both rigs come with separation kits, mikes, mounting brackets, power cables, manuals, and original boxes. The TM-255 is a 55 watt rig, the TM-455A is a 45 watt rig. Both are in excellent physical and electrical condition, a 9+.

I am asking $500.00 for the TM-255 and $400.00 for the TM-455A. If you buy them both you can have them for $850.00 and I'll throw in the factory service manuals too.

Prices are US Dollars, and do not include shipping costs.

Thanks and 73,

Interesting, I just got my Ten-Tec Scout running with the 10 meter module.
I've also noticed the same problem. However, I don't have an answer either.

In my case, there are 2 differnet conditions that I've noticed this:

(1) First set-up: I forgot to properly ground everything, SWR was 2:1.
Another Ham noticed some RF noise in my signal and guessed it was my
lack of a ground.

(2) I moved everything to a different location and connected braid type
grounding wire. The only problem is that the length of the ground connect is
about 12 - 14 feet. (Maybe it's a bit too long for 10 meters.) My dipole
antenna was moved to another spot too. SWR is now beyond the scale of my
meter.

In both cases, I hear my distorted voice coming from the speaker of
my Scout. Also, I'm using the hand mike from Ten-Tec.

415. Getting very high SWR, help !

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-04 00:00:00 UTC
From: Bob <cqbdiaz@pacbell.net>
Message-ID: <35272F52.602C@pacbell.net>
Source record: 148150

I just got my first HF rig, a Ten-Tec Scout, and in my excitment to get it up and running, I failed to ground anything. According to my first HF contact, I had some RF noise in my signal. He guessed it was do to lack of a proper ground.

OK, in my rush to get on the air, I didn't set up things correctly, but the SWR was 2:1. (I'm using a dipole and I'm set-up for the 10 meter band.)

So I decided to move everything to a beter spot and ground everything. The only catch is that the wire for the ground is around 12 feet from the radio to earth ground. I wonder if the length of the ground wire is too long for 10 meters ?

My dipole was moved too.

Anyway, the SWR is now beyond the range of the meter.

Now I'm guessing what I could have done wrong:

The wire to earth ground is too long.

I connected the - line of the power supply to earth ground.

Moving the dipole, really changed the SWR on it.

El Nino ??? <smile>

Any help or ideas would be welcome.

Thanks,
Bob

That's right. For example in Poland for FT-50 with FTT-12 we have to pay
$600.
And for FT-847 even more they you mentione.The list price is $3000 !
That's price which prevents from buying 847 most of the ham's who doesn't
have an oporunity
of someone taking the rig from US to Europe.

>>>
>Just to set the Record straight, I am the manager of an amateur radio store
that is an authorized Yaesu dealer. The "wholesale dealer" cost of an FT-847
or any Amateur radio for that matter is never below more than 8 to 12% less
than the "street" sell price. It's usually just enough to cover the cost of
doing business (credit card fees, rent, shipping ECT.) We hope that the
person will buy some accessories so we can actually make something on the sale.
That is why every dealer coast to coast usually is within + or - $70 on a
$1900 radio.(Call every 800# in the books, an FT-847 is going to have a
delivered price in the mid to upper 1800's from about every authorized dealer)
Believe me if a dealer could beat everybody's price by two to four hundred
bucks on a radio someone would do it & answer the phone all day long taking
orders & counting the money. It's not the US dealers that "set" the price of
a radio, it's the dealer cost from the mfgr. As far as the street price in
Japan goes, I'm sure if you tour the orient you will find that many items are
much cheaper in the country that they are made. (VCR's in korea, clothing,
snowblowers ect.) I would not be amazed to get a better deal on a honda
snowblower or whatever if i flew to the country that it was made in and bought
it on the street there. I'm sure, just like most new electronic items, that

Yaseu USA will eventually lower the price of the FT-847 in the USA after it's
been out for a while, or offer a christmas coupon or something, but that's
just a guess & is beyond my control.

For Sale, Henry 2K-2 Amplifier

I have a Henry 2K-2 floor console Amp for sale. It is in very good condition. It runs a pair of 3-400Z tubes that have full output 1500+ watts output. It works on 10 through 80 meters. Has tuned inputs. It uses forced air cooling with chimneys on each tube. It will run eater 3-400Z or 3-500Z tubes. 220 Volts only.

$700.00

Will not ship, but would meet within 200 miles of Eureka Ca.

For Sale:

Jennings CSVF-500-0107 vacuum variable capacitor. This unit is rated 12 pf - 500 pf at 7.5KV. This is an excellent tune cap for your hf amplifier or tuner. $150 shipped to your door. Open to offers including shipping. 73, George K8BRW

Note: This is the same vacuum cap used in the later Alpha 77Dx amplifiers for the tune cap. Can be used as a replacement in any of the Alpha 77 amplifiers.

> PS: and Yaesu should know better!

At Hamfests, there are usually a good supply of EMI/RFI filters
available in various sizes (Amperage), that do a good job of AC
power filtering...Placing one close to the TV in the power cord,
should eliminate the interference if it is in fact being radiated
from the AC power lines...Good luck

And if you believe this, I have some swamp land in Arizona for sale.
This sounds like the story that the New Car salesman tells you. "We aren't going to make any money on this car, you are getting it for dealer invoice."
Give me a break !
The Dealers like AES and HRO make plenty of money on these radios. The Amateur radio business is just like any other retail business and has a fixed retail mark-up. The Manufacturers set the retail price for a radio and the dealers are not allowed to go below it if they want to continue to sell the radios.
It is an insult to everyone's intelligence to try to say that AES and HRO and the other dealers don't make any money on a new radio.
I guess we should all be grateful to these companies for selling us these radios at these low, low prices out of the kindness of their hearts.
We should all send them some money so they can continue to help us.

>tell me why it is selling for over $1800.? Maybe that is why they offer
>COUPONS!!
>73, Bob
>

OK, here goes:

1. Import and export duties.
2. Taxes.
3. U.S. warranty.
4. Local service.
5. Domestic Japanese model often put out 10 watts, not 100.
6. Japanese ham market is considerably more active than U.S. ham market.
7. User manual translation.
8. FCC certification.
9. Currency fluctuations.
10. Japanese mfgrs often give the domestic market a break.

Basically, that's the price for the radio in this country. Other
countries have it worse than the U.S. does, but they don't whine
as much as we do.

Hey there...

I just bought a Solorcon Antron 99 Base 11/10 meter antenna. It sais it does not require a ground plane, but they do sell an optional Ground Plane Kit for $39. My question is: How can I make a homebrew (makeshift) version of these "Ground Planes"? What would I need to add? And also, do the ground planes REALLY make a diffrence? Any ideas or thoughts are very much welcome. Please email and/or respond in newsgroup. Thanks in advance!

I had that trouble, after 4 years, on my TM-732. Sent it back to the repair depot, they replaced a resistor that feeds the output module and sent it back. I'm not sure it ever worked. Sent it back to them and they replaced the 2 meter output module (not separate transistors) and charged only for the part, about $80. I checked the price at RF Parts and it was the same amount to buy one from them. It didn't look very hard to install. 73,

437. ANTENNA QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-04 00:00:00 UTC
From: email@tig.com.au
Message-ID: <6g4sg8$66c$4@toto.tig.com.au>
Source record: 148174

can someone please tell me whether there is any difference(benefit) in having
the radials on my base vertical at 45 degrees rather than 90 degrees ??

any info appreciated !
thanks.

ps.. please email me.

438. Icom IC-821 cross-band link mod

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-04 00:00:00 UTC
From: aterje@c2i.net
Message-ID: <6g4t4h$6cp$1@nnrp1.dejanews.com>
Source record: 148175

I have just performed a mod on my 821 to enable it for cross-band link and it works great! Very good audio and the change-over delay is not too bad. One snag though, the mic is connected during link operations and should therefore be disconnected or the mic gain should be set to minimum.

The mod only involves the adding of one diode in the front panel display unit programming matrix, in the same row as for the mods to enable rx and tx expansion. The diode is D108 (I assume it to be D108 since is it is placed to the left of D107), and which is the one closest to the VFO.

To enable link mode, set the frequencies for each band and then push lock to put the radio in lock mode. Turn off the radio, and press M/S while turning it on and you are in link mode. Push lock to disable link mode.

I guess this mod also works for the 820.

Enjoy,

73

Extended transmit mod for the ICOM 706 MKII

This file may be freely distributed as long as it remains intact, with
no
modifications, additions, or deletions.

DISCLAIMER:
I assume no responsibility for damage or inaccuracies contained in
this
document. In other words, USE THIS AT YOUR OWN RISK. It worked for me,
however I don't know if it will work for you.

WARNING #1: This mod requires the ability to remove surface mount
diodes.
Only those who are qualified to do this should attempt this mod.
```

WARNING #2: This mod seems to erase all memory channels, etc. You may want
to save this info for reprogramming.

Disassembly:
1. Face the front of the radio towards you.
2. Remove the three screws in a row across the middle of the top of the
radio.
3. Remove the two screws at the top rear (on the sides) of the radio.
4. Pry the top cover off from the back.
5. Disconnect the speaker at the connector.

Modification:
6. Near the top rear of the main circuit board, there is an small, oblong
metal can. Directly below the right side of this can is two surface mount
diodes with a white silk-screened box around them. There is also what
appears to be a circuit board part number just to the left of it (mine says
B4916D). Remove the LEFT diode in the box.
7. To the left of this, there is a test point marked CP3. Just to the left
and above this test point is another box with two *vertically* mounted
surface-mount diodes (Note: there is also a place for 5 more *horizontally*
mounted diodes, with 3 installed). Remove the LEFT vertically oriented
diode.

Reassembly:
8. Reconnect the speaker.
9. Put the top cover back on. Insert the top cover tabs into the slots and
lower into position.
10. Replace all of the screws.

My radio did not require a reset, however I did lose all of my channel
memories. It seems to be able to transmit everywhere except below .5 Mhz. I
have not tested the power output at all frequencies yet.

I hope this helps everyone who have been waiting patiently for this mod.

441. Installation of the UT-106DSP in IC-706MkII???

Newsgroup: rec.radio.amateur.equipment

>should be selling at $1400. Can someone
>tell me why it is selling for over $1800.? Maybe that is why they offer
>COUPONS!!

I really can't see you have any cause for complaint. Traditionally, US prices have always been lower than other countries (except the home market).

In Europe this particular radio has a list price of US$2,800. About 30% of this price is duty/sales taxes which brings the ex-duty/tax price closer to the US price.

There has to be some add-on to the Japanese price for shipping and running the US distributorship plus any US import duty. The question is whether $400 is reasonable compensation for this aspect.

Let us all hope that all the Japanese manufacturers of amateur equipment survive the economic crisis which is affecting the Far East. I would have thought independent manufacturers such as Yaesu are more at risk than giants such as Kenwood.

This thread is typical of US consumer greed which seeks to destroy everything in sight including the environment!

Well, gentlemen,
Summing up - THEY (HRO / AES) really do a LOT of money on your hobby,
If somebody would be interested to know the street price for FT-847 USA
model in Hong Kong - it would be only 1450 USD.
THIS IS a real price, including 100 USD of profit...

But model is not available...
USA dealers has the big LOBBY in YAESU and they stop the alternative
supply to free-economy...

But you may buy IC 746 around 1550 USD street price in Hong Kong now...

Welcome to Hong Kong - the freest economy on the Globe...

73 to everybody,
Igor

VR2ZQZ / KC5VFV

P.S.
Will be glad to answer all questions how to buy normal priced in Hong Kong.

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. These bulbs draw apprx. 60ma. at 12 volts. I found
these at Dayton one year and bought up all the guy had. Lot of 10
grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

As it is much cheaper to purchase radio there I would like to ask you
guys
for addresses, telephones or at least bearings of Ham radio shops in
Seoul.
Anybody knows is there an European version available on that market?

BTW, I am planning to buy FT-847... ;o)

Thanks in advance for any help,

474. Ft-50 Power Drain

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-04 00:00:00 UTC
From: docfrie@aol.com
Message-ID: <1998040400120800.TAA22282@ladder03.news.aol.com>
Source record: 148257

I just seny my FT-50 back to Yaesu, it was draining the battery pack over the course of a few days when turned off. I have heard that some of the later ones do this, Yaesu knows about it and it is a warranty repair with quick turnaround. My radio is vintage 11/97. Anyone else aware of this problem? I know the older radios from 1-2 years ago had no problem with battery drain. Just wonder how widespread it is.

See my later message. I have also confirmed that this is definitely a problem known by Yaesu. If you disconnect the battery, after awhile I was losing settings such as squelch and memories. I bit the bullet and sent mine back today. If you're under warranty, let them fix the problem.

477. Kenwood TM-V7E as I2C slave (remote control)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: marc@aargh.mayn.de
Message-ID: <ffG6C*o6i@aargh.mayn.de>
Source record: 148010
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

I've programmed a 20 pin AVR microcontroller to act as 100khz I2C slave. When properly interfaced to the LCD connector of the V7, it can simulate key presses.

Reading the I2C slave (similar to reading a serial EEPROM) reveals the current LCD contents (frequency and so on).

Writing commands to it simluates the LCD keys.

The LCD can _not_ be connected to the V7 at the same time as the remote controller (without more development). The connectors are non-standard, the easiest (=expensive) way to get them is to buy an LCD extension cord.

I'm not sure how (=whether) to go on with the project, now that the interesting part has been done. Are you interested in my work?

478. FS: 2 Motorola Radius P200 UHF's

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC

Source record: 148011

I have two P200's with charger, extra battery, manuals, flex antennas, original invoice and one belt clip for sale. All for $350. Radios work excellent and are in good condition. 4W output, 6 channels, programable. Freqs are:

469.125
468.189
469.299
468.562
466.888
469.385

Please e-mail at mshemo@yahoo.com.

I'm not a radio person so I only know the basics, they've been sitting in the office closet for a few years. They work fine, my son-in-law and I been playing with them for a couple of days.

Thank you.

Mike

479. Re: RARE Hard to find 14 volt Grain of Wheat Bulbs

Newsgroup: rec.radio.amateur.equipment

Most radios. e.g. Yaesu FT 212,2400,2500 etc.,etc. use a 10 volt bulb which Yaesu wants to sell you for lots of bucks and then it blows out again just like you surmised. I replaced these with Radio Shack 12 volt bulbs at 2 for $1.79 and haven't had to re replace any yet. Yaesu and maybe others run these off of a 8 or 10 volt regulator and not directly off of the 12 volts that the radio runs on.
At any rate, whats so rare about a 14 volt grain of wheater? American Science and Surplus has them for 4 for $2.00 or 50 cents apiece. The $1.50 each price you are quoting sounds like a rip off.

>Getting complaints on low tx audioon 2 mtrs. How do you crank in up??
>Thanks Mark WA4E

Mark,
I assume you are referring to 2-meter FM. I found that setting the mike gain to 7 or 8 instead of the default 5 provides plenty of audio on my rig. Adjusting the gain above 8 produces a more "raspy" audio, probably on the verge of distortion. Also, the mike supplied with the radio is a noise cancelling type to reduce background noises in mobile operation. You need to talk very close and directly into it.
Hope this helps
Ken

It is funny when people resort to making personal attacks when they don't have any hard evidence to support their statements.
Just for your info, I own two businesses, one is service oriented and the other is a RETAIL store.
I guess that I am doing it all wrong when I mark items up and make a profit on them. I make a good living, just like the people who own the amateur radio stores. That is why they are in business, it is not a Hobby.
Here is some of your own medicine.....You obviously don't know how to survive in the retail business world if you are selling items at just enough over cost to break even. If you want some info on how to mark items up for RETAIL sale, I will be happy to inform you about a thing called KEYSTONE .
If you would read the postings a little bit closer and pay a little attention, you would realize that the original posting that I replied to said that they marked the radios up 8-10 %. He said that it was just enough to cover the cost of doing business. He also said that they did not make a profit on the sale of a new radio. He said that they make their profit on the sale of accessories.
THAT IS BULLSHIT !!!

P.S. I will take 10% of the annual gross sales from AES or HRO any day !!!!!!!

Do you live in an area with static problems? Frequent dust storms?
Dry snowfall? Frequent displays of St. Elmo's fire? If not, I wouldn't
worry about it. Static is rarely a threat to VHF equipment. And insulating
the antenna does nothing to reduce static buildup. It usually makes it
worse.

490. portable phone

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: alaska99@webtv.net
Message-ID: <6g79a5$ls9$1@nnrp1.dejanews.com>
Source record: 148023

I live in Alaska, and work in the bush where there are no land lines for telephone use. Whenever I need to make a telephone call, I have to hike about six miles, and then cross a glacier fed river, and then ride a bicycle five miles to the nearest phone booth. There is a home with a land based phone about three miles from where I live as the crow flies. My question is: Is there a way to use a CB or a Portable Phone or ? arrangment to call from my location to access the home land based line? This would be like using a regular extention phone you would have at home, (i.e. 100 ft range) except it would reach about three miles. I would get the homeowners permission to use their phone line, but actually call from about three miles away. This would save me about twenty two miles of hiking and river crossing everytime I needed to make a call. Let alone if I ever needed to make a 911 call. I sure am open to learn how this could be done! Thank you very much.

NIR-10 Noise / Interference Reduction Unit
Version 4.0 Upgrade installed

The NIR-10 is an audio processor designed to enhance the quality of
received voice and CW transmissions. Its modes of operation are
Noise Reduction, (NIR), Notch Filter, Peak, Bandpass and Bypass.

Basically, the unit takes audio from a receiver or transceiver,
processes it, then feeds it to an external speaker or headphones
for listening. It does this processing using a Digital Signal
Processor,
(DSP) for both the filtering and noise reduction.

Mint, with original packaging and instruction booklet.

I have some MSF5000 parts I would like to sell or trade for other
MSF5000 parts I could use.

1 Motorola TTE1602A Triple Stage Circulator/Isolation Network
Look up the price on one of these babies!

1 Motorola TFE6492A "In Cabinet" Transmit Filter with the TLE5732B
Combining Tee Duplexer (The In Cabinet Duplexer made by Moto).

I am looking for the following things:

Motorola TTE1450 Series MSF Power Amplifier, prefer the 40 watt TTE1522A
but any will be considered.

Possibly a Motorola TPN1186A 500 watt Power Supply

Motorola TFE6502A (91-84224N01) Low Pass filter

Thanks,

Tom

What about embedded code? I was thinking of timing circuits and what, if any, dependence do they have on Y2K.
There are those that suggest that satellites, under sea cables, and an incalculable number of other devices may be susceptible.
I have a Kenwood TS-120 that is digitally controlled but does not have a time function so I can't try the 1999 trick.
I hope that we can start a thread to pursue this issue.
Dave

You obviously don't know how to
>survive in the retail business world if you are selling items at just enough
>over cost to break even. If you want some info on how to mark items up for
>RETAIL sale, I will be happy to inform you about a thing called KEYSTONE .

What I said and mean is that 8-12% gross profit is not alot of money when compared to other items that may have 20-50% profit built in. Sure you could "teach" all us ham dealers how to mark up the radios 20-100% more, but who is going to buy an Ft-847 from a dealer trying to get $2800 When all the other mail order 800#'s are out there? I'm not saying we are losing money on radio sales, but if we sold nothing else but radios only, many MORE ham dealers would be closing their doors as it's not enough to cover all costs of doing business AND still have something left over to pay the employees. That is why the margin on Amateur equipment from dealer to consumer is so low, It's a business where the hams have forced low margins because they dial every 800# coast to coast trying to save two extra bucks on a radio. Any dealer trying to make the kind of gross profit that a "normal" retail business gets (clothing, jewlery, hardware ect.) would soon find he has to lower his prices or he won't sell any radios. Anyone familiar with retail knows that electronics has one of the lowest profit margins and amateur radios must be the lowest catagory. This is why Macy's announced they will no longer have electronic departments in their stores. The said the profit margin was too low to justify the floor space. >. You also said "I'll take 10% of the gross sales of hro or AES any day" ..... What do you think the "net" leftover of that gross 10% is?? credit card & other bank fees alone would knock off 2-4%. How about paying the rent?? Gas & electric?? Telephone bills with 800 #'s?? taxes??? Shipping and postage??? Insurance?? Office supplies?? we did not even get to employee payroll yet. Call CQ or QST magazine and find out how many THOUSANDS of dollars it costs to run just ONE issue's full or half page color ad. As a manager of an amateur store I know dealer cost of equipment as well as all these other expenses yet some know-it-all has to spew misinformed crap on the internet and make it sound like all amateur dealers large & small are all in "the big X-file conspiracy" setting high prices for radios that actually sell for among the lowest retail profit margins in the US. I do actually believe the radios are expensive, but don't complain to the dealers, call Yaesu, Icom, Alinco ect. as their dealer cost is what really sets the retail price.

Message-ID: <6g8j24$h7q$1@camel12.mindspring.com>
Source record: 148058

I have an AEA PK-232MBX TNC and the fellow that had it before me removed the internal battery that allows the unit to retain its settings when the power is turned off. Apparently he was using a terminal package that set all of that when the program was started up. Does anyone know where the battery was connected on the circuit board? I have the schematics & PC board layout with the manual, so referencing the component numbers used on them is fine. I think the battery is a single AA cell (please confirm), I just need to know where to connect the '+' & '-' leads on the board.

Thanks,

Rodney - KF4COV

Older Icom radios have solder jumpers ("coffee beads") on PLL boards, and combinations opened - closed determine tuning steps. I'm not familiar with 251A specifics, hope this will help. You may want to look for solder bridges around the IC you've replaced.

Adnan, Icom America
Matthew S. Mayfield wrote in message <352747CA.25104B4@ricochet.net>...
I have a ICOM-251A 2-meter all mode. The RIT stopped working. When I would depress the RIT switch the RIT light would come on, but would not stay on unless I held the button down. After studying the schematic I found that the RIT was engaged via a D flip-flop. (NEC D4013C) So I decided I would change that IC. After changing the IC the RIT worked like it was supposed too. But it also created another problem. The radio now tunes in (FM mode) 15kc where it is supposed to tune in 5kc steps and with the Tuning Step engaged it tunes in 3kc steps it should be 1kc. The chip I replaced it with was a Motorola MC14013B. Is there a difference between a 4013C and a 4013B???? I have checked all the header plugs I removed to change the chip they all look correct. Help!?!?!? this is driving me crazy.

For man-made noise you are much better off with an Antenna Noise Canceler suxh as those made by JPS (http://www.jps.com), MFJ or several European Companies.

George (KQ4QM)

BTW If you really want to go the DSP route, the JPS NIR-12 has two modes of noise reduction, one specifically for that type of noise.

Their is a good website to help with makinf FT-50 mods
Try:

http://members.aol.com/aeimn/ft50/index.htm

This website has pictures and step-by-step instructions
Good luck!!

540. PK-232MBX with lots of extras for sale.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: rjd <bobd28@aol.com>
Message-ID: <01bd60d0$a293c820$226badce@rjd-445cdx>
Source record: 148073

Hello and thanks for reading. I have the following for sale:

PK-232MBX with MFJ TNC/MIC switcheboxes for both Icom and RS HTX-212.
Also, have cable for HTX-202 and HTX-404. With LogWindows, PCPakratt II
for DOS, PCPakratt for Windows, and brand new manual covering
Pactor/GPS/Gateway EPROM upgrade (yes it has the latest EPROM, too)

Works great and look great too.

Price, $150.00 plus shipping.

Thanks

Bob WB2JGH

541. Re: Thoughts on Icom IC-W32A

Source record: 148074

I have one and, in my opinion, only the FT-51 tops it, all things including price considered. Of course, Both yeasu radios (FT-50 and FT-51) allow more control by the operator (no wonder the w32 is easier to use). The advertisements in this NG are for the same radio reposted. The FS offers on them have not changed.

Richard

542. FT-847 First Look

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: Len <umina@ultranet.com>
Message-ID: <6g8v2h$2d2$1@ligarius.ultra.net>
Source record: 148075

I finally got my FT-847 from HRO and have used it to the extent possible (there's never enough time).

Summary (put here first but read the rest if interested)

The FT-847 has a few glitches (AF control, TR relay, no VOX) but none of these are show stoppers.
The DSP operation, while in the audio stage performs VERY well. It is better than the IC-756. Although it performs better than the TS-870, the 870 has a much easier to use interface and since it operates before the AGC strong adjacent signals give the 870 the edge. Receiver audio is superb and plentiful with a richness that sounds more like Bose than a ham rig. The manual is incredible and if you are new to these full featured rigs or a new ham, buy this radio for the manual. It will save you hours of time. The size is modest, about the same as an IC-821 (wider but shorter). The radio is well designed, the labels are in a contrasting white paint screen (much better than ICOM screening which is hard to read except in an office building). The blue LCD display is comfortable and has adjustible backlighting. The full metering capability is missing SWR, but protection of the finals is not lacking.

The receiver is hot. I can't test it but the noise figure on HF, combined with a well done DSP system makes copy of weak signals almost enjoyable. In fact, I started using a small antenna just to be able to put this rig through some tests. Anything better and the radio was so clear and enjoyable to use that it was hard to test the thresholds of various features and controls!

The controls are large for a small radio and easy to use.

To compare this radio to others, here are some comments.

1. Forget the IC-821. This radio is a much better buy, and gives you a lot more. From the silk
screening to the functionality, YAESU has ICOM beat badly. HF is a major advantage if you
intend to upgrade and if now, this rig is killer as an SWL receiver.

2. Against the IC-706 MK II the FT-847 fares well. Although larger, and without a detachable front panel,
the FT-847 includes 450 Mhz and a DSP. The optional auto tuned mating accessory antenna
means the extra room for an FT-847 is probably going to be ignored for mobile installations.
In all but the smallest mobile situations I'd choose the FT-847.

3. Against the IC-756 the FT-847 performs better and has no tiny pots on the front panel. Of course
it's missing the spectrum display and a few other nice things like dual watch. The IC-756 would be
better for the serious DXer but it makes a better band scope than an HF radio.

4. Against the TS-870, the FT-847 costs a few hundred less but is missing most of the creature
features like memory keyers, audio memory keyer, auto tuner, and it makes more noise in
the shack. The TS-870 is a better bet for the serious HFer in this price class especially if you
can get on 6/2/450 some other way. The TS-870 DSP in the IF is much better in certain
situations, even though it might not sound as good as the FT-847, and the interface is
much better and repeatable. The computer interface is also an advantage for the TS-870.

5. If you can own only 1 radio, or have room for only 1 radio where you intend to use it, the
FT-847 represents the beginning of a new era in ham radio. All the popular bands, all the
new modes supported, DSP, and the matching mobile tuned antenna make this a radio that
will extend your enjoyment of radio. If you are new to the hobby starting with the FT-847 will
keep you from endless hours at flea markets trying to turn modest radio $$ into band
access with boat anchors that will strain your marraige and fill your basement. In fact this
radio is XYL friendly hamming at it's best.

Outstanding Features

1. The manual is the best I've seen in 30 years. Whoever wrote this deserves a medal. Many
newcomers to the hobby struggle or give up with some of the manuals that come with rigs.
Not only is it complete as far as the rig goes, there are many step by step operating examples
that really demistify operating. Subjects covered include EME, HSCW and more. I'm excited
to try these modes.

2. The audio fidelity is better than any rig I've heard. It's really pleasent to listen to. In fact it
almost sounds like a hi fi compared to the other rigs on the desk here. AM reception is really
comfortable, but pileups are just as pleasent to listen to. I'm listening to the contest as I write
this with the DSP NR on and the menu selection set to 15 (max). The

fidelity is just beautiful.

3. There is a lot of audio. This rig could be used on a D9 bulldozer and you'd hear it.

4. The radio includes DCS and can invert DCS if required. Good job.

5. The back has 4 connectors, including an N connector for 450. The 6M RF can be optionally
sent to the HF connector. 2M is the other SO-239.

6. The number of ways and flexibility of interfacing to this radio (see below) are fantastic.

7. Radio includes CTSS decode, which was unexpected. It also supports "smart search" which is
common on many 2m radios and a very useful feature while travelling.

8. The radio supports cross band repeat and it will work HF to VHF/UHF however it only works in
one direction and does not observe busy channel check (before transmitting) as do many
rigs that support this. Yeasu missed a major opportunity here. This rig is almost capable of
full remote operation. Oh well.

9. The matching mobile antenna which covers 7-50Mhz looks like a great accessory. Bad
news is no accessories have yet arrived.

10. Shuttle Tuner Dial is fun to use, but a bit sensitive. Will get used to it I'm sure.

11. CW Spot feature is great.

12. DSP NR performance is exceptional.

13. DSP Filter performance is great for CW but tough to use for SSB. The variable low/hit cut stuff is
too hard to use compared to the digital controls of a rig like the TS-870 and there is no reason
for this kind of interface (which interacts if you have large fingers or grab the knobs wrong).

14. DSP Notch function works well.

15. For the Alaska set, the radio operates on 5167.5

16. 1 Hz tuning with capability according to the manual of .1Hz steps.

17. Seperate SSB TX/RX filters with CW filter capability and a Narrow Button to select the
sharper filter from the front panel!

Things that aren't so good

1. The AF control is very digital on the low end. That is, the minimum level of audio isn't
very minimum - when the audio turns on it's got a fair amount of audio minimum.

2. The keyer speed seems to vary too much for very small movement of the speed control. Very
hard to get the exact speed you want.

3. The radio doesn't support full break in, however there is a programmable TR delay of 10ms
to 300ms and a front panel MOX button. The relay clacking is loud (similar to the IC-706)
and it's really not a good CW BK IN rig as a result. While 10ms seems fast, I noticed no
difference between this setting and 100ms. The relay really cruds this up.

4. No VOX. Don't know why or what the thinking was there. I don't use it anyway but many do.

5. The computer interface does not require a level converter (it uses a null modem connector)
but there are a lot of features missing from the functions. For example
you can't send data to the keyer and available data is limited (unlike the TS-870 for example).
This isn't a show stopper, because anyone who uses one of these is probably going to
get into the radio some other way anyway (ie KAM or other TU) which will have this
feature, but it seriously limits the creativity you could have if more data were available
and CW could be entered this way.

6. Small fan is a bit noisey and runs all the time.

7. No SWR metering display

8. No IF output for bandscope (to use an ICOM 756 to watch the IF for example)

Ruggedness

1. The 2m sectoin has survived a transmit into no load. (oops)

Rear Panel Connectors

1. Tuner control
2. Packet (1200/9600) including SQL signal
3. STBY connector with gnd and 4 outputs to gnd (24 VDC 100 mA) for amplifiers
4. RS-232 w/o handshaking (ie only serial in/out and gnd)
5. CW Key
6. RF HF, 144Mhz, 50 Mhz SO-239

7. RF 450 N
8. External Speaker
9. Data in/out plug (includes capability to run ptt with resistor)
10. RCA Plug for PTT
11. ALC in
12. Ground

Front Panel Controls
1. Power
2. MOX
3. Tuner (external accessory)
4. MIC
5. MIC sensitivity/RF Power
6. SQL/Keyer Speed
7. ATTenuator
8. AGC-F
9. RF Speech Processor/Keyer Switch
10. RF Amp switch (for controlling internal or external pre amps)
11. NB switch
12. Moni switch
13. AF/RF gain controls (packet audio not effected)
14. Smart Search
15. NARrow switch
16. Mode Switches (ssb/cw/fm/am)
17. Fast tuning rate switch
18. lock
19. Satellite mode indicators (nice, colorful, bright)
20. Home switch
21. VFO/Memory
22. AB/Track Switch
23. Split/Normal/Reverse
24. Mck/W (memory check/write)
25. AB Switch
26. Sub Switch
27. Keypad (uses some of the above buttons)
28. Shift (IF) Control
29. Dig Fil Switch (DSP filter)
30. Notch Switch
31. NR Switch (DSP)
32. Clar Switch
33. Sub Tune knob
34. Menu Switch
35. Menu/VFO Ch knob
36. Quick memory bank recall button
37. Quick memory bank store button

Well, that's it. Any questions please send email and I'll try to reply.

Dave,

The Y2K thing is way overblown and while it makes for conversation it's not going to have much impact at all.

Most electronics become obsolete so quickly that they are replaced or upgraded frequently enough that the Y2K thing has been accounted for.

Software that's old and might not have accounted for this would have to be really old and in spite of the hype it's unlikely that there is any real problem because old software usually dies from lack of support and better, lower cost solutions. For every application out there, there are dozens of vendors just itching to supply a replacement.

Most companies have already certified Y2K complience and certificates pertaining to this are commonplace in industry today. If we can operate our major corporations we don't really need governments so if they miss it, it just might sunset them sooner. Can you imagine a few weeks without war, terror, torture, propaganda, and perhaps even taxes while they try to catch up?

As far as the hard coding of dates (in hardware logic not software or firmware), this has only been really feasible in the last decade and it's unlkely anyone would have been that stupid with 2000 so close. Moreover it's not common practice.

Bottom line, don't be in an airplane on the eve of 2000, but nothing else is likely to have a major problem that can't be quickly corrected. After all, if Fed-X, TNT, and UPS continue operating (and they will) the data can move overnight by paper or tape. Just ask any network jocky - sneaker nets still work!

/Len

Frank,

I used mine mobile for several years and when I confronted this problem
(which was worse than yours probably due to temperature excursions) I
contacted Kenwood and they sent me a capacitor to replace in the VFO. This
did the trick and made the rig very solid. You might look in a service
manual for this mod if you need more stability.

552. Icom IC-W32A dual band with accessories.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: morinm@csgoeland.qc.ca
Message-ID: <6g969t$lu9$1@nnrp1.dejanews.com>
Source record: 148085

Brand new Icom IC-W32A dual band ht for sale. Comes with CP-12L cigarette lighter filtered power adapter, HM-46 speaker microphone, charger, BP-180 battery, instruction manual and original boxing including warranty card and original bill of sale. I had it for only a month.

True dual band (2 receivers)
Crossband repeat (it really works)
Transmit is from 140 to 150 and 440 to 450
Expendable by removing a diode (I didn't do it)
Receives from
108-136 AM
136-200 FM
300-999.995 FM cellular blocked
Receives cellular perfectly on frequency plus double the first IF
Gives 3.5 watts with included battery, 5 watts with 13.5 volts or BP-173 battery.

Total value is over $400. U.S. according to HRO

Will sell for $300. U.S. shipped insured to your door.

Contact me by email if interested. No c.o.d. possible to the U.S.
We can arrange something for payment.

Good day I have the FT847 on order (the shipment has not arrived into New Zealand yet) has anyone brought one yet??
I have some questions about the radio.
1) according to the spec's there is a gap 30-36mhz, have since heard Yaesu has fixed that and there is no longer any gap, is this true??
2) what is the rx spec's like out of band? eg 30-76mhz, 108-174mhz and 420-512mhz
3) Does the radio do cross band repeat??
4) Has the radio got seperate ptt out for each band (eg to run linears etc)
Any info would be great....looking in getting the 847!!!!!

regards Mike ZL3TIC

OK, before you burst a vital vein and suffer a massive stroke, I stand corrected... GM as far as I know uses an aluminum oxide in conjuction with the standard permanent tinting installed on factory glass. I spoke (typed?) before thinking about EVERY make and model available with coated glass. GM using this material is why tinters are able to so closely duplicate the look on the other windows with film. Chyrsler has an off shade of green or bronze (depends on make/model), Ford is just to glossy etc etc... anyhow, I'll let you have this one Chris

556. MOSLEY PRO-67A ANTENNA FOR SALE

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: News groups <tomcom@home.com>
Message-ID: <6g9b6g$kb4$1@ha2.rdc1.sdca.home.com>
Source record: 148089

ANTENNA FOR SALE at greatly reduced price.

MOSLEY PRO-67A

This is a biggie for those of you who might be interested in hi forward gain and good front/back gain ratios and may want to run high power.

6 bands: 40,17,20,15,12, and 10 meter bands

40 mtrs: 2 el, gain=4.9 db f/b=12 db
20 mtrs: 3 el, gain=8.5 db, f/b=20 db
17 mtrs: 3 el, gain=8.5 db, f/b=23 db
15 mtrs: 3 el, gain=8.5 db, f/b=20 db
12 mtrs: 3 el, gain=8.3 db, f/b=15 db
10 mtrs: 4 el, gain=9.4 db, f/b=20 db

Power rating for SSB is 5.0 KW
VSWR at band center is less than 1.6 to 1

Antenna has 7 elements
Boom length is 24 feet. Turning radius 24 feet
Boom and all elements are stainless steel. No aluminum.
Excellent condition.

Currently antenna is on 10 foot tower on my roof (single story house) and is available for inspection and demonstration.

I need help with removal and will sacrifice at $250. (new price is now about $1400)
Antenna is UPSable but would prefer not to ship. (ship weight about 120 lb.)
Location is San Diego California
Must sell. Contact

Tom, KB6VV at 619-448-2527 (leave message) or tomcom@home.com

Your 120 is NOT digitally controlled. It does not have a uPc. It has a
digital readout that shows what freq(???) you are on. Unless you can
figure out how to have a PLL chip(BCD coded and hard wired) mess up you
don't have a problem.

563. Need cable diagram FT-757GXII to FC757AT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: Dave Schwartz <davenpat@kw.igs.net>
Message-ID: <6g95nt$5vo$1@news.igs.net>
Source record: 148096

Just got an FC757AT to go with my FT757GXII. However, the original 8-pin Molex for the FT757 end of the interconnect was cut off and lost (guy had it connected to a 980 but was too cheap to buy the proper cable and hacked up the 757 cable). Anyone know the pin mapping? I can puzzle out the mapping of most of the pins (e.g. pwr, gnd, inh) but would prefer not to experiment with the band data lines since these are not in any identifiable order.

.............Dave, VA3DGS

564. Re: Getting very high SWR, Problem solved.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: Bob <cqbdiaz@pacbell.net>
Message-ID: <3528613A.38A5@pacbell.net>
Source record: 148097

Today I pulled down the dipole and put together a Hy-Gain Yagi.
The SWR from 28.100 to 28.500 is under 2:1 and a lot closer to 1:1.

I'm surprised that a simple move of the dipole could make such a
big change in SWR. Well, it's sure been an education. :-)

Thanks to al who wrote to me with ideas and suggestions.

73,
Bob

566. FT-50RD vs. IC-T8A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: koury@primenet.com
Message-ID: <35286c7a.22470895@news>
Source record: 148099

I am very new to this ham radio stuff and know very little about it. I want to buy an HT that I can grow into rather than grow out of. I am looking at the Yaesu FT-50RD and the ICOM IC-T8A. It looks like I have to choose between having an alphanumeric display (which I think would be very useful for a beginner to have) and having access to the 6-meter band (I'm sure that would be nice too, especially if I knew what the 6-meter band was). Any advice from knowledgeable people out there would be appreciated. Thank you in advance.

567. KAM Capacitor Help Needed:

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-05 00:00:00 UTC
From: "Scott D. Carter" <captsdc@aloha.net>
Message-ID: <35287CB0.E6F5DB6E@aloha.net>
Source record: 148100
Body handling: Binary attachment payload not displayed: vcard.vcf

I had a lightening strike take out a capacitor (not to mention my
power supply transistor) in my KAM TNC and have I no schematics.
It was cooked so hot that I cannot discern what its characteristcs
are. It is located near the voltage regulator and looks like it was
a small gold colored tear-drop shaped, epoxy dipped kind. The board in
the KAM is a vintage 1986 that has a PC-20 designation on it.

Can someone tell me what C39 is or what I could safely use in its stead?

Please shoot me an email at captsdc@aloha.net

Regards,
Scott - WH6FQ

From: Craig and Gloria Novak <craig_novak@abraxis.com>
Message-ID: <35283F50.7149@abraxis.com>
Source record: 148101

Thanks to Bob, KF6JHG ,Scott Rosenfeld NF3I and Jack Kovar

for all of their great suggestions. However, I have tried all of them:

1.) SWR is very good, 1:1
2.) Tested with an known good ground
3.) Transmitted into a dummy load to isolate the antenna from the issue

I have also retained the two RF chokes on the TenTec mike cable. All
with the same result of my voice being retransmitted back into the
Scout. I heard that I am not alone in this and that other modules with
the Ten Tec mike have the same problem. CW is good however.

Any further ideas? (besides call TenTec which I will do tomorrow).

Thanks again.

Craig KU4PL.

569. Re: Icom IC-746 versus Yaesu FT-847

Newsgroup: rec.radio.amateur.equipment

From: John Buck <jrbuck@interpac.net>
Message-ID: <352898D3.7E4DBCDC@interpac.net>
Source record: 148102

The very low frequency used for DSP is indeed an IF (Intermediate Frequency) if
it is done prior to the detector..
Note that some of the old super radios used final IF of 50kc. I think some were
even lower. They did this for the same reason as the current DSP. To get
good selectivity before the detector stage. If the last IF is before the detector and
at some center frequency above zero then it is a true IF stage.
Higher frequency IFs became feasible only with the advent of good crystal filters.
Oops, I almost forgot mechanical filters too.
I do agree with the concept that more IFs are not necessarily better, however
the design tradeoffs for modern multi band radios seem to favor more than two IFs to get
best image rejection combined with super selectivity.

Body handling: Binary attachment payload not displayed: vcard.vcf

hello,
as authorised YAESU dealer we want to give only some more informations as far as we knwo. Maybe it can give you some more informations to find the own opinion how to buy a transceiver. The japanease version looks same but has some difference to the european and us version. It use 4 pcs of PL 259 (or M-typ in Japan) for HF, 6m, 2m and 70 cm. The export version use 3 connectores HF and 6 as one PL 259, 2m as PL 259 and 70 cm as N-type.
The japanease version can not be modified for full range tx.

If you can read the japanese manual ?
From HongKong we receive all time offers for domestic versions. Domestic is Japan, so please get your own opinion what you want.

Hope we can make the situation little bit clear.

Source record: 147910

Brand new Icom IC-W32A dual band ht for sale. Comes with CP-12L cigarette lighter filtered power adapter, HM-46 speaker microphone, charger, BP-180 battery, instruction manual and original boxing including warranty card and original bill of sale. I had it for only a month. I simply don't need it.
See full specs at the Icom web site
http://www.icomamerica.com/amateur/dualhand/

True dual band (2 receivers)
Crossband repeat (it really work)
200 alphanumeric 8 character memories
CTCSS encode and decode

Transmit is from 140 to 150 and 440 to 450
Expendable by removing a diode (I didn't do it)

Receives from
108-136 AM
136-200 FM
300-999.995 FM cellular blocked
Receives cellular perfectly on frequency plus double the first IF

Gives 3.5 watts with included battery, 5 watts with BP-173 battery.
Also 5 watts with included CP-12L adapter

Total value is over $400. U.S. according to HRO
Will sell for $275. U.S. shipped insured to your door.

Contact me by email if interested. No c.o.d. possible to the U.S.
We can arrange something for payment.

I am considering buying an IC-2340H 2m/440
mobile, and would appreciate any comments
or opinions on this rig.

I've been told the rig has 3 power settings
(4, 12, & VHF 50, UHF 40 wts). It also has
the DTMF tone chip.

That's about all that I know about this rig;
your feedback would be helpful.

Awhile back I had seen an advertisement for a module stacking unit accessory which allowed you to use more than the 3 bands allowed. This was an external device, anyone have any info on this?

tnx in advance for any input,

Barry K1SWR

Look at Lowe's Home Improvement stores. Average markup is 27%!! And
it is a discount store! Garden tractors may have the lowest markup

and that is 11%.

Hams are like most people, really do not understand how the world works. Especially economics. Hell, our congressmen know it but are forced to vote in ways that their idiot voters want. All these factory workers think that everyone is getting rich but them. These are the same people that treat retail sales personnel like trash.

Hi Gary,
I have a Kenwood ts-570 and have found that the dsp does eliminate a lot of the qrn. My main QTH is in an area that has a lot of QRN from various sources. If I turn on the NR (noise reduction) feature of the dsp most or all of the noise does disappear. I have been able to hear and work stations that I could not even hear with the NR turned off. The downside is that the audio quality is not as good and the other station sounds like they are under water at times. I have found that using earphones helps with this.

One type of noise that the DSP does not seem to help is ignition static. However the normal Noise Blanker feature eliminates this most of the time.

Dear Bryce,
I have had an opportunity to use the T8A portable and have noticed the exact same thing. Poor "intermod" rejection on 144 MHz, reasonable "intermod" rejection on 50 MHz and 440 MHz. I have not had a chance to compare the T8A to other new dual band portables.
The T8A is much worse on 144 MHz than my old Icom IC2AT 144 MHz portable.

594. Setting master oscillator on the FT-50

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6gbi20$f4f@cascade.cs.ubc.ca>
Source record: 147929

I recently set up frequency counter with very good precision and accuracy (see next article for details) and checked the transmit frequency accuracy of my transceivers. The FT-50 turned out to be 3-4 PPM off frequency - still within specs, but worse than I'd like. So I decided to adjust it.

I'd previously seen information on the net indicating that the three adjustments visible when you remove the black battery label from the rear of the radio are VHF deviation, UHF deviation, and CTCSS deviation. So I opened the radio up further to find the master oscillator adjust. However, on looking closer, what I'd read turned out to be wrong. The CTCSS deviation adjust is a pot, and it's on the control board somewhere. It must be the pot near the lithium battery. Meanwhile, the master oscillator trimmer is a capacitor on the mother/RF board. It turns out that it *is* the rightmost adjustment visible when the battery label is removed.

For people who have FT-50 modification info on the net, please check the info you have and update it. The rightmost adjustment under the label is the master oscillator (transmit and receive frequency), *not* CTCSS.

So I tweaked the trimmer, and got the transmit frequencies much closer than they were before. On my FT-50 at least, the error in VHF frequency is about 1 PPM different than the error in UHF frequency, so it isn't possible to get both of them closer than 0.5 PPM to correct simultaneously. I ended up setting the UHF frequency as close as I could to correct and ignoring the VHF error, since a 0.5 PPM relative error is three times as large an absolute error at UHF than it is at VHF.

Dave

595. High-resolution measurements with a cheap counter and GPS

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6gbivr$nk6@harpo.cs.ubc.ca>
Source record: 147930

davem@cs.ubc.ca (Dave Martindale) writes:
>I recently set up frequency counter with very good precision and
>accuracy and checked the transmit >frequency accuracy of my
>transceivers.

Here's how I did it: I have a ratio-type frequency counter (often called an "intelligent counter" that can give 8 digits of precision at any frequency down to 1 Hz with 10 seconds of gate time. It does this by counting both the input and the internal timebase oscillator for approximately the gate time, then dividing one by the other. The gate always opens and closes on a selected edge of the *input* signal, not the timebase, so an integer number of input signal cycles are always measured. There is a +-1 cycle ambiguity in the timebase oscillator count, but it's at 10 MHz so that's only a small time uncertainty. Such counters are not very expensive any more.

I use a GPS receiver board with a 1 Hz output as my ultimate time/frequency reference. The 1 Hz output is phase-locked to the US Naval Observatory master clock time over the long term. In the short term, there may be jitter on the output of 100 ns or so. When I measure the frequency or period of this signal with a 10 second gate time, I'm measuring 10 s +- 200 ns or so, an accuracy of 2e-8 most of the time. (The receiver is a Garmin GPS 25. The GPS 20 works too, though with somewhat more jitter in the output. The long-term accuracy of both is determined by the USNO clocks).

When I measure this 1 Hz signal on the frequency counter, I can get 8 digits of displayed info with a 10 s gate time. I select either frequency or period to get the best resolution. (You want the counter to be displaying mostly 9s, not mostly 0s, for best resolution). The reading will not be exactly 1.0000000, but it will be close. The error in my reference is about 2 counts in the last place max, so all of the remaining difference between the counter reading and 1.0000000 has to be the error in the frequency counter timebase.

Knowing the error in the frequency counter timebase, I can then measure any other frequency, divide it by the counter's reading error, and get the true input frequency with an accuracy of a few parts in 1e8.

I can also use the displayed frequency when measuring the 1 Hz signal to adjust the counter's internal timebase oscillator. I can get it within about 0.5 PPM this way, but the trimmer capacitor is just too touchy to get closer than that. Besides, the oscillator is not temperature compensated, and may drift about 0.2 PPM with changes in room temperature.

So this gives me a counter whose direct reading is within about 0.5 PPM,
which is good enough for most applications. For better resolution,
I fire up the GPS receiver, measure the remaining error in the
counter at that moment, divide that into the counter readings, and get
frequency measurements that are good to perhaps 0.02 PPM.

Dave

596. Help using Kenwood SM-230 Station Monitor

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: herbr@netcom.com
Message-ID: <herbrEr0InH.96q@netcom.com>
Source record: 147931

Subject: Help using Kenwood SM-230 Station Monitor
Newsgroups: rec.radio.amateur.homebrew
Organization: Netcom On-Line Services
Summary:
Keywords:

I just picked up a Kenwood SM-230 Station Monitor for use with my Kenwood TS850S. This transciever does have the IF output jack for use with the SM-230, but doesn't have all of the functions that is available with a TS950.

However, I thought I would be able to monitor the waveform pattern of signals on recieve, but it appears that I can only monitor my transmitted wave forms, and the band scope on receive.

I used to have a TS830 with the older Sm220, and I thought this combo had this capability.

Is this poosible to do with the SM230? can I use the built in scope somehow to do this? I really like being able to monitor the received SSB wave forms.

Any help or suggestions would be appreciated.

Thanks.

SSB is Single Side Band. It's am with the carrier and one side band
removed. All the power goes into the remaining side band.
Popular with ham radio operators and the military. If you don't have a
bfo (beat frequency oscillator) it sounds like Donald Duck.
More effective power and less bandwidth used.

Can anyone tell me which CW filter combination is preferred for the FT-102?? Obviously, the 300Hz first and 270Hz second would offer the best selectivity, but what about the 600Hz first and 500Hz second? With the 600-500 pair, can you still use the shift/width controls to further narrow the passband? With the 300/270 pair, do you lose that capability?

If you don't know what 6m band is, you don't need either one. Get yourself "Now You are Talking" book at Radio Shack, and LEARN everything in it. I'm not flaming you, really, you need to know a few things before going out there and burning a couple hundred dollars. That's easy part!!!

Ken Koury wrote in message <35286c7a.22470895@news>...

Actually, I have read the book. I did not find it helpful at all. It
does not go into very much depth, understandably since it does cover a
lot of different subjects, and there is very little practical
information in the book. All it really does is coach you in enough
radio theory to get you to pass the licensing exam. Although I do know
more now than I did before reading it, I still don't feel I know very
much. If you have a recommendation of a book that goes beyond this I
will pick it up.

I have been trying mostly to understand the meaning of the names of
the different features so I can at least try to make an intelligent
decision. I have been to a few different ham stores where I live (Los
Angeles) and the people behind the counter seem to know little more
than I do. They tell me that a certain radio is "real neat and has
lots of features" but when asked what the features are or how one
radio is different from another they are completely stumped.

Hi !

Just fer info, the price fer FT-920 in France is $ 2400.00 !

FT 847 is not available at this moment, but could be the
same ratio ...

Are you ready to leave in France ?

Just a question, is-it possible to know the result on 40m with
2 or 3el yagi around gray line with this famous FT-847 ???

73's Lee F5MUX

PS : another example : annual Ham radio licence is $ 48.00 and
special call like TM7XX fer contesting is $ 26.00 !!!

From: eric_fre@hotmail.com
Message-ID: <6g9nrv$88d$1@nnrp1.dejanews.com>
Source record: 147970

Thankyou to every one who replied to my post on the IC-T8. As a result I rushed out and bought one and am now the proud owner of a brand spanking new T8!!!
I received a few replies on mods possible for this tranceiver and even though I am quite capable of removing a few diodes, I have access to all the equipment like stereoscopic microscope and a really pointy soldering iron (-:
If there is a software or keyboard mod for freeband TX it would be much aprreciated, does any body have the programing software from Icom or a third party?
A reply via e-mail would be appreciated.

Cheers
ERIC.
P.S. as this is a very new radio in Australia accessories are unavailable. can any body recomend a good mail-order supplier?

I recently purchased an Icom IC-T8A and noticed that there seems to be a great deal of intermod received on the two meter side of the radio. There seems to be little or none on the six meter and seventy centimeter side of the rig. Has anyone else noticed this, or is this unique to my ht??

646. New Icom IC-W32A dual band ht for sale.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: Michel Morin <morinm@csgoeland.qc.ca>
Message-ID: <yQ3W.2486$QI6.1012937@carnaval.risq.qc.ca>
Source record: 147981

Brand new Icom IC-W32A dual band ht for sale. Comes with CP-12L cigarette lighter filtered power adapter, HM-46 speaker microphone, charger, BP-180 battery, instruction manual and original boxing including warranty card and original bill of sale. I had it for only a month. I simply don't need it.

See full specs at the Icom web site
http://www.icomamerica.com/amateur/dualhand/

True dual band (2 receivers)
Crossband repeat (it really work)
200 alphanumeric 8 character memories
CTCSS encode and decode

Transmit is from 140 to 150 and 440 to 450
Expendable by removing a diode (I didn't do it)

Receives from
108-136 AM
136-200 FM
300-999.995 FM cellular blocked
Receives cellular perfectly on frequency plus double the first IF

Gives 3.5 watts with included battery, 5 watts with BP-173 battery.
Also 5 watts with included CP-12L adapter

Total value is over $400. U.S. according to HRO
Will sell for $300. U.S. shipped insured to your door.

Contact me by email if interested. No c.o.d. possible to the U.S.
We can arrange something for payment.

648. FT-847, IC-746, IC-756 ???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: xhduff@ica.net
Message-ID: <3528cc47.0@lightning.ica.net>
Source record: 147983

I was over at the local Ham store on the weekend and had a chance to
play with the some of the new(er) radios with the intention of buying
an HF/6m radio.

The Yaesu FT-847 is quite a radio.
I was surprised by the small size of it...amazing what they can pack
into such a small box and great for taking along on trips however
I would have prefered it to be a little more substantial in size.
Spinning the VFO know was tough...the knob is almost too
small for a finger hole. Ethetically,the radio is a little too
'plastic-y' for my liking.
Has anyone noticed the deadband in the volume control ?
The receiver is quiet from the 7 o'clock to the 10 o'clock positions
and then all of a sudden there is lots of audio...too much.
I didn't try it with headphones but can well imagine the difficulty
trying to adjust for a low listening level. Quite annoying I thought.
I'm sure it is digitally controlled and a software patch will 'fix'
this.
The other annoyance was the distortion to the received audio
when adjusting the one of the DSP controls. Abnormal I figure.
No antenna tuner (for obvious (size) reasons.
Otherwise a lot of radio for the buck...not a contest HF rig
by any means but rather a nice addition to what I figure
is a half decent satellite radio (and 6m is a nice bonus !).

The IC-746 seemed to be an inflated IC-706. HF/6m/2m.
Nice having the antenna tuner and 100 watts at 2m
but it still looked and performed like my old 706.
I'm not partial to the extra-large frequency display
that looks like it was meant for the near-blind
(ie...IC-737,738 'JUMBOtron' display).
The frequency readout takes up a large portion of the
display screen.
This one just didn't do anything for me.

The IC-756 was the radio of choice for me.
At the loss of 2 m and 70cm I gained a much better
HF radio.
I liked the cool multifunction display, and all of the additional
bells and whisltes like the bandscope. Miles ahead of the
IC-706 bandscope by way of performance and usefulness.
The dual watch feature is very nice however the sub receiver
is limited to operation withing the same band as the main RX
due to the shared bandpass filtering and stages upstream.
Too bad but I guess it is still a handy feature.

For the limted time that I have played with it, I am impressed.
Not an FT-1000 or IC-775 but a decent mid range radio

Admittedly, I was primarily in the market for an HF/6m radio and not
an HF/VHF/UHF radio. I'm sure the FT-847 and IC-746
will have their place for many.

The ground plane is not needed for an elevated 1/2 wave vertical such as
the Solarcon. The kit could only help to seperate the feed line from te
antenna radiation pattern. I wouldnt waste the money. You wont see any
improvement. You could better spend the money by raising the antenna 20
feet higher.

650. RX Range of Icom T2A?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: Martin Jones <mjones@ti.com>
Message-ID: <3528D0EF.A4D81F13@ti.com>
Source record: 147985

Hi,

My correct email address is at the bottom of this message.

I purchased an Icom T2A this weekend, and spent a lot of time exploring the
various funtions. So far, everything seems to check out OK except for the
receive frequency range. The "specifications" page in the owner's manual
states that the receive frequency range is 118-174 MHz, but my radio will
not accept a frequency setting below 136 MHz. I notice that 136-174 is the
receive range for the euro version, but I have the US because it will transmit
140-150.

Should my radio really receive all the way down to 118, or is this a misprint in
the manual? Is there some "trick" to get it to accept a keyboard input below
136 MHz?

best regards,

Marty Jones N5XEQ

A fellow CAP member asked me to program his new T2A since he couldn't figure it out. I've been playing with it for about a month now and while I have all the CAP freqencies he wants and the amateur frequencies I want programed. I've found it to be a nice radio, except for the difficulties programing.

I too have not been able to go below 136. I called HRO, where he purchased the unit. They were not sure and recommended calling the ICOM tech support folks (long distance).

Another CAP member has had one of these for almost a year. He says his manual says it only goes to 136.

If it doesn't go into aircraft AM, I know of at least 4 unhappy CAP members that wanted to be able to monitor the aircraft emergency frequency.

Len,

There are optional SSB and CW mech filters. Can both reside in the
radio at the same time (two slots) or do you have to choose one?
Original 706 required you to make this choice; 706MkII accommodates both
a CW and a SSB xtal filter.

Phil

For Sale:

Icom R-100 wideband receiver. This set is in excellent condition and works great. It receives from the Broadcast Band through microwave (I don't recall the exact frequency range offhand), including the 800 cellular bands, which ARE NOT blocked. The R-100 is quite sensitive, and I've been enjoying the shortwave reception in my car. The set provides AM, FM, and Wide FM modes, selectable tuning steps, and has an excellent Auto Store feature. See all the particulars at www.icomamerica.com.

This set retails for over $700. with the cell bands blocked. I'd like to sell mine for $375 shipped, OBO. I'm selling the set because I've decided to add a mobile HF rig to my car.

Please reply to tony@bright.net, or call me at (419) 523-5000 8AM-5PM Eastern Time.

Thanks & 73,

Tony Schroeder N8SNC

From: srwhite@ibm.net
Message-ID: <3528f491.0@news3.ibm.net>
Source record: 147996

Some of the literature I've seen on the TH-79AD states that it is PC programmable, but it doesn't show up in the manual anywhere. I tracked down an old web site address where one was supposed to go for information, but the company doesn't appear to support that anymore. I believe the address was: www.acsys.com. I wonder if any knows how it was done. I believe it somehow just used an external DTMF tone generator or something... When I purchased the rig it was under the understanding that it was PC programmable. Looks like I'm going to have to create the software myself. I'm a 'C' programmer and would not mind writing the software. But I need info on how the radio accepts PC input, and control codes, etc.

Any info would be greatly appriciated!

Source record: 147997

I had a chance to compare the FT-847 and the IC-746 at Kcom in San Antonio,
this Saturday. I went there to do exactly this.
Well, the FT-847 is the winner...and not by a nose.
I won't go into every detail, but I have 26 years of hamming on dozens of HF units,
and I will just give a subjective report.
(I own a 756 now)
The IC-746 is large, stubby (tall and not wide), has a very crude resolution
LCD display, and has a useless spectrum display. It seems that you must
de-select the receiver to enable the spectrum display...which has the resolution
of a pong game. It is somthing you'd see on an HT. The RX seemed alright.
If it is the same execution as the 756, it can just barely cut the mustard on
todays bands. IF it is lesser than a 756, good luck. I give this rig C-.

The FT-847 is compact, has a great display, solid feel, neat jog wheel tuning,
great sounding RX, and overall good design. Shortcomings?...
only 76 -or so- memories, no dual-band RX at the same time, and it is unclear if
the unit will RX on 10 meters and 2 meters at the same time (for RS sats)
The menuing system is very well done. DSP is adjustable through it.
There are 4 seperate antenna connectors too! Bravo! You could buy an HT and this rig
have a great ham station. I give this rig a B+.

take care-
Bob

>at some center frequency above zero then it is a true IF stage.

Yes, that's exactly right. Older Drake radios have a final IF of 85 kHz so that
they can give good variable selectivity with LC components. The Q that would
be required at a higher IF isn't feasible with LC parts. And the same sort of
reasoning applies with DSP. DSP isn't fast enough to work at a high IF yet,
so to get good variable selectivity, noise suppression, auto notch, etc, they
need to operate at a low last IF. But this is as true an IF filter as the LC
network in the Drake 2B since it is before the detector (actually, some of the
DSP radios *include* the detector in software, and that can be a big improvement
too because an ideal detector can be generated in software while it is difficult,
or totally impractical, to do so in hardware for some modulation forms).

>Higher frequency IFs became feasible only with the advent of good crystal filters.
>Oops, I almost forgot mechanical filters too.

Yep. They're about the only practical way to get sufficient Q at a high IF for a
narrow bandpass. But crystal and mechanical filters aren't variable bandwidth.
They can't do noise reduction, etc. A DSP can.

>I do agree with the concept that more IFs are not necessarily better, however
>the design tradeoffs for modern multi band radios seem to favor more than two IFs to get
>best image rejection combined with super selectivity.

The main reason seems to be to allow easy passband tuning (and IF shift).
But the presence of IF DSP negates the need for use of multiple IFs to generate
passband tuning or IF shift.

>RS-35M. Any help would be greatful.

The 20 amp draw is PEP for a SSB radio. The average draw will be four
to eight times less depending on how excessively you've cranked the
speech processor. In CW, it is the key down draw, so keep the dashes
short. In RTTY, throttle the radio back to about half power because it
doesn't have the heatsinking capacity to run full bore continuously.
That will also drop the draw on the power supply to well below 20
amps.

So, to answer your question directly, the Astron 20M can handle the
FT-847. But it is always better to be conservative with anything that
sports a large heatsink, and the 35M will loaf along a lot more comfortably
than the 20M.

666. Re: Icom IC-746 versus Yaesu FT-847

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-06 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <6gatoj$lv1$2@geraldo.cc.utexas.edu>
Source record: 148001

Greetings all-
I went to Kcom in San Antonio this Saturday to compare these two
rigs side by side...and here is my report:
(PS: I currently own a 756)

I have to give the award to the FT -847 Why?
The IC-746 is stubby...not wide and quite tall...it looks chunky.
On first tey, you get the inpression that you are on a large
IC-706. In fact, what IS the difference? The dislay is very low
resolution which results in the numbers being almost 1" high.
The spectrum display is useless. The display on the 756 is light
years ahead of the 746's. It seems that you have to select either
the display or the RX...and the display is not real-time. It looks
like somthing you'd see on an HT. The RX sounded fine on 20mtrs.
No splatter IMD ...and all the features worked fine. If it has the same
RX implementation as the 756, it will have trouble rejecting powerful
local signals from swamping the front end on 160/80/40 in the evening.
Using the antenna tuner in front of the RX will cure this, but it shouldn't
require that.
The 847...what a nice package. The form factor of the rig is excellent.
It would look good in the shack, or in the mobile. It has four seperate
antenna connectors for the 4 bands...Bravo! The display is clear and
nicely done. The menuing system is full featured and easy to use.
You can adjust the DSP NR levels...and even set weather you want to use
the internal UHF/VHF preamps or send voltage to mast mounted ones.
The RX sounded great. It handled a busy 20 meters with ease. The jog
wheel tuning makes moving around a breeze. You can go slow, or move from
10-160 in about 2 seconds. The DSP bandpass filters sounded fine..but
are in the audio section. The menu allowed you to preset 25/100/200 etc
filter presets for CW...nice.
The question is the following- Will the radio crossband from HF to
2/450? This is needed for RS sats...and remote base operation. The fellow
behind the counter said yes, but I could not make the rig do it.
The 847 will also not RX on 2 mtrs and 450 at the same time...not good.

On the plus side, I'll bet that there will be an easy mod to allow continuous
RX (TX?) acoss the radio's full range. There may also be a way to upgrade the
number of memories.

OK..long enough! LEts see if we can get a price break on this unit.
Anyone have any ideas?

> any info appreciated !
> thanks.
>
> ps.. please email me.

The SWR of your vertical will be as close to 1:1 as you can get if the radials ar drooped down at 30-45 degrees. The impedance of the antenna will be close to 50 ohms to match the 50 ohm coax which matches the 50 ohm radio. Without the droop the antenna will be closer to 35 ohms which is 1.4:1 SWR. Either way the SWR is NOT a problem. Get the antenna as high as possible. (I've assumed a 1/4 wave vertical here)

>noise... how well they work, if they work, and any suggestions on models
>that really work well to reduce man made noise ...

The DSPs aren't a lot of help with this sort of interference. It affects the receiver AGC before the DSP can get its bits on it. You need an effective noise blanker near the radio front end (before any narrow filtering), or you need one of the noise canceling units such as the ANC-4 or the one made by MFJ. These cancel noise before it enters the receiver by phasing the output of a noise antenna with the output of your signal antenna. If the noise is local, it will appear on both antennas and can be cancelled (one source at a time), but a distant signal will appear mostly only on the signal antenna and won't be cancelled. The best solution is to attack the source of the noise, however, and eliminate it at its source. You need help from your power company to do that.

***** all flames aside *****

A: US dealers are indeed barely surviving.
b: The 847 is made in China, and Yaesu is making $$
c: We deserve a fair shake, because without US, Yaesu cannot exist. We are the bulk of the market for their radios.

Lets find a way to get a fair shake. Hell, you could go to Japan from LA, buy the radio and come out at about the US price...including airfair. Thats not OK. Lets find a Jap dealer who wants to deal with us, or assemble a buying club to send a rep to Japan. They Have to sell radios, we don't have to buy. For that we get some control.

My TM733 did almost what you describe except that power was out on both bands as I recall. This happened 3 or 4 years ago right after the 733 came out. I got an early problem radio, lots of returns. Later versions were problem free I hear.

The scenario went like this...driving on the interstate talking simplex to another guy, changing power from 5 to 50 watts as terrain required (I was 5 miles ahead). Did this for 45 minutes. Radio is quite HOT. Suddenly he cant hear me and is calling. I get out my 2 watt HT and manage to restore contact using the duck antenna from inside the truck.

It turned out (I think this is correct) there is a single driver transistor that commands the 2m and 70 cm power MODULES as to the power level chosen. If the driver goes bad (mine did) you get no output amplifier action, only exciter power of 15 mW or so. It is amazing how far 15 mW goes with a good 5/8 whip by the way.

You could replace this yourself if you feel confident. Its not a small part. Its right next to the right corner of the power module and it has

a heat sink clip on it. Which power module ?? I cant remember. I think its on the 440 side of the chassis. I dont remember the part no. 2SCxxxx maybe or its kenwood designation.

I'm fairly certain this driver runs both amps. So why you have only 2m loss confuses me.

> (I my get a 440 amp & need to not go over 5 watts!
> Tnx

You can just set the radio to 5 watts but you run the risk of turning it up later.

One method you may consider is to run the radio output thru 100 feet of RG58 to take advantage of its 9 db loss per 100 feet at 440 Mhz. Lets assume a 10 db loss (or divide by 10)..then your max possible drive to the amp is 5 watts, 1 watt or 0.5 watt based on 50/10/5 watt radio into 10db loss attenuator. (RG58A/U has 8.2 dB/100' loss at 400 Mhz per Belden)

Of course the receive signal will also get attenuated 10 db which can be accepted or made up for by means of high gain antenna etc.

Look in the ham radio catalogs for an item called a Blitz Bug. You put it
in your coax line to your radio. It will discharge the static buildup if
you have any. Read all disclaimers before using the device, and install it
just like they say. AND - - - when the big bad lightning gods come
around - - DISCONNECT YOUR RADIO!!! A little common sense will keep your HT
healty for many a year!

Preach it, brother!

When my major hobby was darkroom photography, I bought supplies and equipment from cheap mail-order dealers a few times. It didn't take long to convince me that I was better spending a few lousy bucks more to get the same items from a local dealer--someone I could ask for advice, return a faulty product without a bunch of trouble, etc.

I feel the same way about ham gear; wish I had a local dealer but I'm very happy with the two I use, and do NOT run around trying to save a few bucks on any given item.

The new little Yaesu HF rig I recently got to replace my ancient Griefkit seems like a REAL bargain, too, considering how specialized that sort of equipment is and how small a market there is for it. Not to mention how much fun I'm having with it!

I'm not the best authority on FM and HTs but since no one seems interested in giving you a decent reply, I will try. You asked about a few features and aspects. In the Los Angeles area (and most everywhere else) 2 meters is the most popular FM band, followed by 440 MHz. Next would probably come 220 MHz and finally 6 meters. Six meters offers some interesting modes of propogation that will on occasion take your signal thousands of miles. This phenomenon is not unknown on the other bands but is less common.

I own an FT50RD and am quite happy with it. I have no experience with the Icom IC-T8A. I will say that I never use the FT50s alphanumeric display. It does make a decent (not great) scanner, going up to 1 GHz. The PC software works ok but usually I have to download information two or three times before is completes successfully. As a result I don't often use it either.

As a beginner, you probably have many more questions. I would suggest getting in contact with local ham clubs. They are lots in the LA area. Most are VHF oriented and are full of beginners and are quite willing to answer questions. If all else fails, Email me.

Good luck,
Tom

Hi Group,
Anyone out there have a copy of the manual for the Professional Mosley Tribander yagi. (10, 15 20 Meters). One is being donated to me by a local Ham and I'd like to get my hands on a manual before I take it down and reassemble it.
E mail responses preferred.
Thanks in advance.
John

Dan,

I also have a FT10ZD that I bought new..... It's a great radio.....I will never sell it.

Now you added a muffin fan.... does this mean you do not have the "optional" stock Yaesu Fan? For those who don't know the FT101ZD is a highbrid (solid state with a tube final) and those tubes get hot enough to not only fry and egg but to burn it....hi hi. The stock Yaesu fan does a good job of keeping those tubes cool but I wonder about an add on fan????

Second..... You should turn the heater on and let the tubes warm for 10 minutes before tuneup.....this will help things stabilize and you should get less drift..... Also longer tube life.

Good Luck!
Don, W6IQ

I have recently doanload and edited this very
impressive logging program.

There is just one part of it I cannot understand. And that is the
printing of labels. I know absolutley zilch about this. I have
a dot matrix printer which does not cover this aspect.

Could someone please help me out and get me started, I
would be very grateful.

Many thanks, Jim...ZL2BMH

> and control codes, etc.
The person at the company developing it left and they mothballed it. I spoke with them yesterday and they said they will not sell even the beta release incase they decide to continue with the poroject (unlikely!!)
I discussed the original S/W and H/W at length with the original designer Dave Sims!
Serial data drove a dedicated micro to generate DTMF tones which ran a low power TX. Effectively performing the same function as Cloning! Receive used speaker audio in TX clonning to down load the data!
They were looking at also using other chips like serial to DTMF en/decoders. I discussed at lenght the possibility of modulating the serial port directly and also if the audio could be squared and demodulated. As we have done this at the last place I worked. A much nicer solution. He had never even thought of this possibility so it struck me that they didnt really have much of an idea on what they were doing. Hence I think why they gave up. I dont think they got it to work is the real answer.
However if you want to design some software I'm happy to come to the party with Hardware!

Now for something completely different!
Inside the little door for the CTCSS PCB are two pads on the main uP board. One is marked Rx the other Tx looking at the TSM they appear to be data links for the micro. might pay to have a look at them.

Any body have any ideas?

Cheers
ERIC.

697. FT-847 Mod here it is

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: Pieter <ibelings@mindspring.com>
Message-ID: <6ge8op$38h$1@camel19.mindspring.com>
Source record: 147780

I've received some preliminary information about the ft-847 mod. It involves taking the cover off(which one I don't know) and solder bridging jp1002 and jp1003 then powering up with the lock button pressed. According to my source this will open the radio completely. According to the mod, transmitting in the range of 33 - 37 MHz can damage radio. I'm still waiting for my radio to try it on. If anyone tries it please let me know the tx range.

Perform this mod at own risk.

Peter

698. Icom PCR1000 controller Alternative

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: PCR@mahy.demon.co.uk
Message-ID: <891987957.12661.0.nnrp-01.9e988867@news.demon.co.uk>
Source record: 147781

To those interested, Version B1.5 of TalkIcom can be downloaded from 'www.mahy.demon.co.uk'.

TalkIcom is an alternative programme to control the Icom PCR1000.

I think it needs a new name, any ideas?

Extract from the readme.txt file:-
About Issue B1.5

This issue has the following major changes.

Will exit properly now on windows shutdown.

Mouse buttons have auto-repeat.

AutoScan button now needs double click to stick down, then scan will continue after busy clears.

The Station Caption states when in Freq mode etc.

3 Priority channels have been added.
These channels are tested at the rate set in the priority control form.
P1 has a higher priority than p2, etc.
When a priority signal is found the button will go fuchsia, as will the station caption.
On the signal disappearing the delay for all 3 priority channels is set by the common priority hold time.
The common priority sample time, is the time allowed for the signal present to be determined.

8 Quick memory buttons have been added. These require a left mouse press to tune to that mem, a long left button press will store the current state to that channel.

All above settings are held in a new .ini file. This file must reside in the same directory as the programme, as indeed must the data bank file 'bank.fql'.

Also the window positions are held in the ini file.

Two options are now given, to either switch the radio off on exit or not, and the option to show hints or not.

This lot has taken quite a lot of work! So I have been pretty bad at answering emails.

This version will again run for 28 days from install, or until 5th May 1998. There should be a further update before this date.

73's de NIS.

Email to 'pcr@mahy.demon.co.uk'.

> confirmation before I try this).
>
Yes it does work!
I know of people that have done it.

However I srongly recomend against crunching it as this may damage the board.

All that is necessary is hit the centre pin (one on the single side, pointing to the edge of the board) with desoldering braid. even a small 1.5mm chissle soldering iron is OK and then while just heating the pin lift that end of the diode pack with a pointy scalpel blade, bending the other two pins slightly like hinges! The diodes are common cathode to that pin lift it and its effectively gone and once it has been lifted (only 0.5-1.0mm) it can be switched in and out with just a blob of solder!

However it should be noted that this may be a highly illegal activity as FREE BAND RX can be initiated with a simple keyboard mod!

Cheers
ERIC.

> >The T8A is much worse on 144 MHz than my old Icom IC2AT 144 MHz portable.
> >John, VE3JTP

You CANNOT compare a single band HT to a Dual. Its totally different
technology.
The T8 I have is marginally better then my TH-79A, However it has less out of
band birdies,(in the bands I listen to) and comparing apples with apples ie
against the FT-50 and VX-1 I've seen 50's better and worse (think it is due to
component tolerances!!) and it SH*#S all over the VX-1. We dont have that many
high power transmitters here in Australia but when you can listen to FM
broadcast radio in the 2m band in full hifi quality that rings alarm bells!

Cheers
ERIC.

Had one - been there. Saw a mod in QST back when the 101ZD was real popular. Don't remember the exact details but as I remember they took the VFO module out of the enclosure it was in and turned the circuit board over and remounted it. Apparently the components could not get enough air circulation as built and this allowed the components to cool and the radio to stabilize.

Sorry I don't remember the exact mod (and lost all my QST's in the 1997 flood) but if you have access to back issues you might look for that mod. It was a problem then and apprently still is. Great radio! If mine had the WARC bands I guess I'd still have it.

Help needed:

I recently dug out my old IC-H16, along with the programming book. But there are some items that aren't addressed in the book. Any help will be appreciated.

Is there a way of resetting the CPU?

Several channels have disappeared. They can't be accessed from the programming mode. Thus the need to reset the CPU.

Can the battery save mode be disabled? And How?

This is the early model that has priority scanning. As opposed to the later model that had scanning with, or without, priority.

709. CB->10m conversions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: rexstout@uswest.net
Message-ID: <rexstout-ya02408000R0704981700580001@news.uswest.net>
Source record: 147792
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,sci.electronics.basics

I have a Pearce-Simpson Tiger 23, which is a 23-channel CB radio, and I want to convert it for use on the 10meter band. I'm just not quite sure how to go about it. First of all, I need some clarification on how it works as it is. It has severl crystals, which are:
10.14 10.16 10.17
10.18 10.595 10.615
10.625 10.635 37.6
37.65 37.7 37.75
37.8 37.85
The receiver circuit is a dual-conversion superhetrodyne, and the example in the manual is channel 9(27.065 MHz). The signal comes into an amplifier, then is mixed with a 37.7MHz signal. That puts out a 10.635 IF signal into the second mixer with a 10.18MHz signal, which is then a 455KHz IF signal, and so on.I don't really understand how it works(I've never been good with theory of operation of ANYTHING), but if I replace some of the crystals with the right value, I should be able to get it into the 10m band, right? OK, lets assume I leave the 10.18MHz crystal in place. For this example, lets say I want to get the radio to 29MHz. If I replaced the 37.7MHz crystal with 39.635MHz, then the rest of the circuit should function right. Right? Like I said, I'm not good with this kind of stuff. Well, I'm going to go read a few books on this and see what I can figure out while I wait for replies. TIA...

From: Toshi Watanabe <watanabe@Heraldnet.com>
Message-ID: <352AC5B9.CA60297D@Heraldnet.com>
Source record: 147793

Almost all dual-band (2m/70cm) radios' output is 50W/40W or 50W/35W. My question is why? Why not 50W/50W? And considering 70cm has shorter range, it sound reasonable to have higher output on 70cm instead of 2m (i.e.. 30W/50W or 50W/70W) to have comparable range on both band.

Lee,

I think you underestimate the Japanese market for a radio like the 847.
Approx 50% of the hams in the world are in Japan.

Phil

Nice to see some reality injected into this thread, Gary. In fact,
about 50% of the world's hams are in Japan. We are fortunate that this
large (Japanese) domestic market has motivated them to build radios for
us too. Likely if there were no hams in Japan, Yaesu/Kenwood/Icom would
not be in the ham radio business.

I'm looking to buy a used 2m/440 rig pretty soon & I'd like to spend somewhere in the neighborhood of $300. Any info on the advantages/disadvantages of different radios would be appreciated. I'm considering Kenwood, Icom, or Yaesu at this point, but have never owned any of these before, so I'm open for suggestions.

Also, will most dual-band radios function as a cross-band repeater, or is that a feature only on certain models?

Thanks,

Rodney Isom - KF4COV

It's a long shot, but if you attenuate the signal, or use some other
sort of noise reduction, it can quiet the audio as well as distort the
signal. This can be done in the setup menu of many radios. My AT-600
is horrible when the attenuation is on for 2-meters..

One guess that I could add is that it takes more raw energy to produce
higher frequency waves of the same amplitude as a lower frequency wave.

If the radio's are using the same power source for the amplifying
circuit, it would only produce a smaller wattage on the higher
frequencies.

A quick question though.. Is ground wave propagation less for higher
frequency waves across the spectrum? Or is there a cutoff point where
the propagation starts to get worse for lower frequencies?

Unbelievable!!!!!!

Get a life you blokes.......

In Australia every rig on the market costs about 33% more than it does in the US. (not only Yaesu, also Icom etc)

I don't think Yaesu would go broke if you stopped buying their radios, they would probably be relieved with not having to deal with a whole lot of whinging Hams.

Personally I think the FT-847 is a bargain and it will retail in Australia for around $3250 ($2200US). Thats not too bad considering that there is one sole Yaesu dealer in the country with no competition whatsoever.

(BTW, it is not even available here until the end of May, so you should consider yourselves lucky!)

CPUs in all land mobile radios cannot reset, they contain proprietary data.
If something goes wrong they need to be recloned, either via a PC, special
programmer or from other compatible radio.

Source record: 147820

Hi, Ken

I answer technical questions here in the newsgroup, so this thread got my attention. Term "band" refers to a specific range of frequencies, and there are a LOT of them allocated to Amateur Radio service. The most popular one is 2 meter band: 144 MHz to 148 MHz, hence a lot of single band handhelds operate on that band. Some radios are dual banders, and usually include one other band AND a 2 meter band in one package. T8A is a tribander, it has a 6 meter band (50 MHz - 54 MHz), 2 meters, and 70 cm band (440 MHz - 450 MHz). Both 6m and 2m are located in the VHF part or the radio spectrum, 70 cm band is UHF.

When we say: "2 meter band", we are actually referring to a wave length of those specific frequencies. Frequencies and wave lengths are interchangeable, simply divide the speed of light (299,792,458 m/s) with a frequency (in Hertz or 1/s) and you'll get the corresponding wavelength in meters.

Adnan, Icom America

738. Recommend bike/ped-mobile HT?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: "Eric T. Jorgensen" <ericj@eskimo.com>
Message-ID: <Pine.SUN.3.96.980407225346.3385B-100000@eskimo.com>
Source record: 147821

I've been looking at the specs and prices for the 5-watt FT-50RD and TH-G71A, but am willing to hear out other arguments as well. My three main uses for the HT would be as bicycle-mobile, pedestrian-mobile and plug-it-in-wherever. I do like a lit-up display (if it's done similarly to my Pro-51 scanner, push a button for a couple seconds of light, otherwise off), but the G71As keypad light may end up being obnoxious once I'm used to the keypad.

I also don't have full access to PC/Win/etc, so "PC programmable" means nearly nothing to me at the moment, and "menu-driven" makes me queasy about quick-access possibilities. I'd like a unit that I can punch in a few freqs and go...for other tweaks I can spend time on searching through LCD screends or what have you.

Any comments about unmodified 50RDs or G71As, or similar 2m/70cm rigs, would be greatly appreciated.

73 and tnx

Cross-posted to:
alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

I have come upon a Heathkit GR-64 Shortwave receiver. I would like to sell
it.
It looks clean. All tubes glow. I have heard the WWV on it but I can't say
that it works perfectly. I will say that it needs work. But then what
receiver of this vintage doesn't.
No box no manual.
$25.00 or best offer plus shipping from southern California takes it.

741. Motorola Spectra and Saber Radios

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: Wayne Jones <wjones@hgea.org>
Message-ID: <352A90C0.25D1@hgea.org>
Source record: 147824

Does anyone know of a website with information regarding the use of these two radios (both VHF and UHF) on amateur frequencies? I currently have a Saber, and am planning to get a Spectra installed in my auto for business use, and would also like to program them for amateur use also, if possible.

If you have any information to share, please e-male me at wjones@hgea.org since I read the newsgroups infrequentlty.

Aloha

742. FS: Fully Self-Contained Lifeboat Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: n7lxo@olympus.net
Message-ID: <352aa1fd.68990084@news.olympus.net>
Source record: 147825

I have an ITT Mackay Marine Portable Lifeboat Transceiver Type 401-A
that needs a new home.

It is a rugged, compact, entirely self-contained radiotelegraph
transmitter-receiver designed primarily for use on survival craft
(read LIFEBOATS) to promote safety of personnel at sea. As built,
this equipment provides for communication on the 500kc distress
frequency and on the long range 8346kc channel between survival craft
and between such craft and rescue vessels or aircraft.

All power required for operation of this radio equipment is provided
by a built-in, hand-cranked (in the organ grinder tradition) electric
generator.

Unit is waterproof and is built to float after a 20' drop into the
sea.

Power from the two cranking handles is applied to an integrated
electric generator through a "silent" chain ball-bearing drive with a
72:1 angular speed step-up ratio. Original lubrication normally
suffices for the lifetime of the equipment.

RF power losses are minimized in the power amp and output networks by
use of silver-plated hardware, teflon antenna feed-through insulator,
and high Q variometer wound on a low-loss glass-fibre malamine form.

....
NOTE: Needless to say, this equipment must not be utilized such that
it automatically broadcasts false auto-alarm or SOS signals. That
would constitute a Federal crime with substantial penalties. The unit
would have to be modified for other use, limited only by your
imagination and inventiveness. Say...

Field day (they should make a special class for such projects)???
....

The Type 401-A package includes the following items:
a. 401-A transmitter-receiver in canvas cover (the cover is beginning
to show its age after a career at sea). The case has a removeable
cover that protects the control knobs, connection posts, headset and
keyer.
b. Two generator cranking handles stowed within pockets in the cover.
c. A four-section collapsible mast with antenna wire and rigging
stowed within a separate, but attached, pocket of the cover.
d. A braided ground strap wound on a spool; one end of wire is
secured to the panel while the spool is kept within the case cover.
This spool would normally be dropped over the side of a lifeboat but

of course can be connected to any suitable ground.
e. Headphones housed within cover of case, with end of cord permanently secured to the equipment.
f. Spare parts, including the following tubes: 12AT7, 6AQ5, 6U8, 6BJ6, and neon lamp NE51.
g. ORIGINAL OPERATING AND MAINTENANCE MANUAL, which contains:
1. Full description.
2. Electrical circuit descriptions.
3. Operating instructions.
4. Maintenance.
5. Electrical parts list.
6. Illustrations/drawings, including 4 tables & 10 drawings.
h. Wall mounting bracket to wall mount the entire tranciever in its case and cover, as well as provide compartments to stow the spare parts and manual.

This complete package will weigh close to 70 pounds when packed so UPS shipping and packing costs could be as high as about $50 if you are across the continent from the Puget Sound area. Check with UPS to determine your cost for shipping. Obviously, local delivery is preferred as no crating would be required.

PRICE!
I don't know how to price this item so will entertain all offers received before MIDNIGHT, 15 May 1998.

ANY OFFERS TENDERED SHOULD SPECIFY YOUR BID PRICE, AND INDICATE WILLINGNESS TO PAY THE SHIPPING AND CRATING COST AS A SEPARATE ITEM, THUS PRECLUDING ANY MISUNDERSTANDINGS.

THE BID PRICE WILL BE GOVERNING, BUT I RESERVE THE RIGHT TO SEPARATELY VERIFY THE SHIPPING AND CRATING COSTS TO YOUR LOCATION BEFORE ACCEPTING THE BID. Any savings I can make on the shipping costs will be refunded to you.

I WILL NOT REVEAL THE AMOUNT OF COMPETING BIDS TO ANYONE.
Thus, anyone submitting a bid has an equal chance of succeeding. Basically, I'm not trying to get the best possible auctioned price so you are only bidding against your willingness to purchase a truly unique item.

IF YOU ARE THE SUCCESSFUL BIDDER AND ACTUAL SHIPPING AND CRATING COSTS, WHEN FINALIZED, ARE UNACCEPTABLE TO YOU, I RESERVE THE RIGHT TO OFFER THE UNIT TO EACH NEXT HIGHEST BIDDER, IN TURN.

Hope this once in a lifetime acquisition will make someone the star of their local club.

I have for sale a IC-706 and AT-180. Includes items below:

IC-706 MKI
AT-180 (auto tuner HF+6M)
FL-101 CW filter 250Hz
OPC-581 11.5' separation cable
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $1200.00 for everything. I will pay shipping lower 48 states. For another $150.00 I will include a Timewave DSP 59+ (latest software). Unless it is sold first. I can be reached by E-mail or my phone number is 216-741-4717.

From: xhduff@ica.net
Message-ID: <3528213b.0@lightning.ica.net>
Source record: 147860

From what I see in my IC-756 that claims to be "quad conversion"
it is truely triple conversion with another IF strictly for the DSP.
The other misnomer in the 746 and 756 is the claim about "IF DSP".
The IF is so low that it is really done at AF frequencies, not a
higher IF like some of the other radios..
Sort of a play on words by Icom by my account.

Date: 1998-04-07 00:00:00 UTC
From: danhowie@freewwweb.com
Message-ID: <35299ffd.7422550@news.freewwweb.com>
Source record: 147870

Hello Usenetters!
I have a Yaesu FT101ZD transceiver that has a very aggravating problem. After a very long warm-up period, the frequency still drifts up the bands about 100- 200 hertz in transmit. I have had several other hams give their opinions on what the problem is, but after checking out each lead, I still have the drifting problem. I have checked the voltages at the power supply for regulation, and everything there is fine, in receive or transmit. The voltages stay rock solid and even the 6 volts that supplies the VFO is solid, in receive and transmit. I have added a muffin fan to the rear of the transceiver to try to keep the unit cool, but it has not stopped the problem. I had a ham tell me to change the regulator feeding the display/counter, but that doesn't affect the drifting , just the stability of the counter. Does anyone have any suggestions? Thanks in advance...Dan

Hello,
I am looking for a used UHF GP300 16 channels if possiable. I am looking to spend only about $200-250 range due the Police Department funding very little towards the radio. If anyone is looking to sell one at this price please let me know because I am in desperate need of this radio.

Thanks for your time and hope to hear from someone soon.

N9MXT1 - Jeffrey

763. IC-T8 Standard Setups?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: eric_fre@hotmail.com
Message-ID: <6gcha1dec1@nnrp1.dejanews.com>
Source record: 147877
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.equipment

If any one with an IC-T8 could perform the following check and record and forward the displayed number to me along with relevant mods if any and version it would be appreciated.
I am mainly interested in unmodified as new radios because I am trying to ascertain the various setups for different countries.
By holding the two buttons either side of the 0 and powering on, the radio displays the setup of its diode matrix as a number. I am trying to determine the differences in diode setup for each country.
As far as I can tell doing this has no other effect on the radio.
Any help would be appreciated.
Cheers
ERIC.

Message-ID: <352a5a07.50246239@news.demon.co.uk>
Source record: 147880

Hi Tim

I am of the opinion that the reason for loss of output on 2 and not 70cms is because there are 2 PA transistors - one for each band. The 70cms seems to be okay and the 2m has gone?

Thanks again

John
GW0ACH/GW8VBV

>I'm fairly certain this driver runs both amps. So why you have only 2m

767. Problems with PCR1000 (hardware related on the radio, pls read!!!)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: Miguel Puchol <mpuchol@eurohubner.com>
Message-ID: <3529D70E.44B29975@eurohubner.com>
Source record: 147881

Hi,

I am having the following problem: My PCR1000 was working fine, until two weeks ago, when the bandscope was showing 'phantom' signals of about S3-S5 on all adjacent frequencies, on all bands. Also, the AFC was either pointing left or right, even when on perfectly centered signals, so when I turned it on, it just kept shifting the freq up or down endlessly. I took it in for repair, and the man said it was a problem with the serial input to the radio, and that whatever failed caused the VCO not to lock (he wasn't very specific).
Today, and exactly 18 hours after I picked it up, it has happened again, all of the sudden.
Has anyone got any suggestions?
Also, I have been noticing that lately I will get a rather strong shock when I unplug or touch metallic parts of my computer, for example if I unplug the line in jack and touch it while touching the case. This has happened with this and the previous PC I had in the room, so could it be that one of the components is 'bridging' a.c. (the speakers, monitor,etc...) - because if this is so, I would hate it blowing up my PCR1000 every day...

Cheers, and 73s

Mike

768. FS: LIST

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or komudo@feist.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section, 0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section. 0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

56.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

57.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

58.) Conrac RND-9 monochrome high resolution video commercial monitor (9")...$ 75.00

59.) Astatic UGB-D104 Desk Microphone.....$ 75.00

60.) Cushcraft A4S plus A744 Beam, 4 element, 10, 15, 20 meters with 40 meter add-on.....$ 300.00

61.) Hustler RM-75 75 meter trap.....$ 20.00

62.) Hustler RM-20S 20 meter supertrap.....$ 20.00

63.) Hustler RM-40 40 meter trap.....$ 20.00

64.) Hustler MO-3 straight 54" mast.....$ 20.00

65.) Hustler MO-3 straight 54" mast.....$ 20.00

66.) Heil HM-5-5-K Single Boom Set Microphone for Kenwood.....$ 50.00

67.) Telex Dual Boom Set Microphone.....$ 100.00

68.) E.F. Johnson Model 250-20 Lowpass RF Filter, 52 ohms impedance....$25.00

69.) K0YEH Antenna/feedline Matching Coil, 10 thru 80 meters.....$ 25.00

70.) K0YEH Antenna/feedline Matching Coil, 10 thru 80 meters.....$ 25.00

71.) K0YEH Antenna/feedline Matching Coil, 10 thru 80 meters.....$ 25.00

72.) Assorted Feedline lengths, 8214, RG-8/U, RG-58/CU, etc.....$ Inquire

73.) Van Gorden Engineering Model DL-1 Hi-Q Antenna Dummy Load.....$25.00

74.) QST's from 1959 to present (Full Set).....$ 1.00 ea.

75.) Proax Model 376 Coaxial Selector Switch(5-position).....$ 45.00

76.) Rohn, 25G Tower, 40 Feet, with two heavy duty house brackets.....$250.00

77.) Rohn 1.25 inch diameter, 10 foot mast...$ 10.00

78.) Inverted-Vee, 17-Meters, with W2AU balun and tower side-arm.....$ 50.00

79.) Cushcraft Model A147-11, 11-element, 2-Meter Beam.....$ 75.00

Noticed a mod go by about removing the 1st of the
3 diode set to expand xmit (I guess).

Anyone try this to their radio, did it work?
(Not to doubt you Jim, but I'd like at least another
confirmation before I try this).

774. Spectra 900mhz ham conversion

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-07 00:00:00 UTC
From: abaxter3@hotmail.com
Message-ID: <6gd9gf$5mu$1@nnrp1.dejanews.com>
Source record: 147888

Experimenting with Spectra, trying to slide into
ham bands. (It was cheap enough to hack on!)
Xmit "seems" to be OK (the VCO locks), but the receiver
seems to be much higher than ham bands... (ie if I put
in a simplex set of freqs just above the ham bands, its fine.
If I try 1 mhz into top of ham band (928 I think), I get
FAIL0001 (vco unlock).

I guess I need to change some caps in the VCO to adjust the
steering voltage, but don't have a detailed service manual.
I noticed the Maxtrac
mods require the Murata filter change, is the Spectra wide
enough to only require the VCO changes? I have NOT removed
the VCO board yet, when I do, is the recieve & xmit apparantly
visable, I'd rather not hack on the xmit side if it doesn't
need it!

Anybody got any experience with these???
VG

I am looking for an Icom IC-901 mobile. Working condition. I don't care if it has any optional band units or accessories, but they're preferred.

I've always wanted one of these, and am finally doing something about it!

Would prefer to make a trade if possible. I have tons of video equipment, consumer camcorders, television camera's, etc.

Let me know! Thanks...

Actually, it will... It's a bit of a kludge, but if you program Tx freqs
in for things out of band (500MHz or 110MHz), it won't Tx. Works quite
well.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $225

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $225

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $250.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50 OBO

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. several $5 each.

Very very true, and mainly because hams will abandon
them in a heartbeat to save two cents.

>b: The 847 is made in China, and Yaesu is making $$

Well, we *hope* that they make money on it. Otherwise,
they won't build them anymore. And note that "cheap
Chinese labor" isn't the largest factor in equipment cost.
That's largely component cost (not made in China),
development cost amortization, sales and distribution
cost, and general operating overhead. And the largest
single component of cost is taxes of various sorts all
up and down the line. (To put that one in perspective,
GM says that a Caprice costs $600 plus tax when
you figure the contribution of every tax from when the
ore was dug out of the ground until the dealer delivers
the vehicle.)

>c: We deserve a fair shake, because without US, Yaesu cannot
> exist. We are the bulk of the market for their radios.

You might want to reconsider. US HF amateurs are about
1/10th of the world's amateurs. Yaesu doesn't want to lose
1/10th of their market, but they can exist without us. OTOH,
without the Japanese manufacturers, US amateurs would
be struggling to find rigs.

>John, VE3JTP

Well, virtually all of the wide band HTs are worse than the IC2AT with regard to intermod. About the only current HT comparable to it is the Radio Shack HTX202, and for the same reason, very good ham band only filtering in the front end.

> would like.

Well, son (because I'm an old "dude"), believe it or not, there WAS a time when a young high school student on a limited budget would patiently "scrounge for the parts" to BUILD his first HF rig... non-cw or QRP or whatever! You see, that's what this hobby used to be all about! At least, why would you NOT want one of the "plentiful used" radios? So, your sympathy for the "fellow complaining about price" is EXACTLY why I'm selling everything I own that has to do with amateur radio... it just isn't FUN for me any more with these prevailing attitudes!

Actually, I think that amplifier use should be drastically curtailed.

Far too many operators are in a mode of "if the amp ain't on, I ain't gettin' out"

You're gettin' out alright, about 20 or 30 Khz "out" on each side!!!

Remember, 'only the power necessary to maintain communications'?

OK, QRO guys . . . have at it.

Bill

802. Starting my own station

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: Paul Herrera <p-herrera@tamu.edu>
Message-ID: <352BF650.685F1309@tamu.edu>
Source record: 147666
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I'm a new ham (waiting for my technician licence to come in)
and is wondering how to put together my station. As I'm a
student, money is a concern. As of now the plan is to get a
2 meter HT or mobile at this time so that I can get on the air
immediately. Next I would get a HF receiver so that I can
listen to HF bands while I work on code to upgrade to tech plus.
I plan to go to a local Belton Hamfest being held next week.
First on my shopping list is a 2 meter rig, followed by a good
key for CW (and possibly a keyer). At this time I doubt that I
could afford a HF receiver or transceiver.

I've been interested in a kit from Ten-Tec (Model # 1253) which
is a 9 band regenerative shortwave receiver. It is only $59, so it
is in the right price range. I realize that it will not be as good as
the big commercial rig, but it may be a good economical start
and I get the fun and pride from assembling it myself. (I've had
experience in assembling kits, tho' I haven't done one in a while.)
A friend of mine suggested that I jump directly into assembling a
QRP HF transceiver kit, as it will be in my price range and
gives me added incentive to upgrading to tech plus as quickly as
possible.

My question is, whether my plan is good and reasonable,
or whether there are any better alternatives. Thank you for any
advice you can give me.

The Yaesu Ft 50R is way better than that other radio. I have a Yaesu FT 50R
and this little radio has awesome performance. Can be moded like crazy. That
radio is the best on the market personally.

Add about $50.00 to your suggested purchase price and buy a brand new Yaesu FT50! The FT50 receives on only one band at a time so it will not do cross-band repeat. However, you CAN set it up to receive on 2 meters and transmit on 440 so you can use a dual band mobile rig to cross band with. That arrangement allows you to use your HT on low power, conserving batteries, and still have a reasonable punch using the mobile rig. OH YEAH - set your mobile on medium or low power and (providing you have a gain antenna) it will still have more punch than the HT on high power.

809. Yaesu FT-1000MP DSP Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: Pete McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <352C3CB1.3ADF@MAIL.IDT.NET>
Source record: 147673

Can someone please explain the operation of the DSP on the 1000MP. What I need to know is this: is the DSP fully adjustable (and how) like the DSP on the FT-920 (in other words, are there adjustable high and low cut knobs, or is there some way to adjust the high and low cuts on a variable basis?)

Looking at a photo, I see "Contour" and "NR" on the DSP knob, nothing else. There seem to be 4 preset IF bandpass settings... Is the high/low cut setting preset into one of those 4 settings on the dial?

Finally, how well does it work (is it AF DSP, I think so?). Comparisons to the 756 or 870?

Thanks --

Pete -- KA2YDY

Message-ID: <u4fuuP0Y9GA.263@nih2naab.prod2.compuserve.com>
Source record: 147674

Hi John,

I have just completed my second such conversion. I have a "never used" Teaberry Model T 40 channel, all tube base radio that I converted to 29.0 Mhz. It's beautiful and the transmit audio can't be matched, boat anchor or not. The 40 channel (synthesised) set required only on crystal change, 15.250 to 17.285 as I recall. I also have an excellent++ 23 channel Teaberry that required only 2 crystals to put it on 29 mhz. I have a KRIS 23 channel on the way this week, guess what, that will convert too. I stay away from the "sandbox" sets, there are plenty of low milage tube sets out there, plenty of bang for the buck.

73,
Don Rasmussen WB8YQJ/6

811. Icom IC-756 Pricing

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: Pete McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <352C40DD.279B@MAIL.IDT.NET>
Source record: 147675

Why has the price of the 756 shot UP to 2300 at TexasTowers??? Could they be raising it because the 746 won't sell so well (if the 746 is 1830, and the 756 is 1999, people will drop the extra 170...).

Mind you, the price at HRO and AES is still the same... 1999.... just wondering though...

Hi Rich,

We see the same thing with the SRBs from the Shuttle launches. I've been told that as the boosters descend into thicker air, the hot gases and combustible by-products and residual fuel tend to ignite in puffs. The term used is "chuffing". It is quite visible even on the daytime images taken from the CastGlance and StarCast aircraft. I've watched many of these films in the course of my duties (Flight Evaluation Lead Engineer for the company that makes the SRBs). Really some fantastic images as the SRBs go through re-entry.

As an aside, we now have a Video camera and VCR mounted in the forward dome of the SRBs. The mic is hooked up and the unit turns on at lift off. Though no visible images are recorded until main parachute deployment (when the frustum separates from the SRB to deploy the main parachutes , there by uncovering the camera canister mounted in the forward skirt dome) the entire flight sounds are recorded. Now that is really neat audio!

Cheers from Sunny Florida

You have a bad LED display. Looking for a junker 27, 37A or 47A (displays are identical) is a very good idea, considering that those displays are pricey. Be very careful if you are going to replace it yourself!

831. Trio 9130 2m All Mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: "Michael G. Crossley" <mgc@netcomuk.co.uk>
Message-ID: <6gfpfh$2gt$1@taliesin.netcom.net.uk>
Source record: 147710

I have a Trio 9130 of unknown history. When it has been switched on (from cold) for about 10
seconds to maybe a minute the display (sometimes) dims and flashes at a rate of about 10 flashes
per second. When this happens the radio de-tunes and usually reverts to a frequency of 145.000 Mhz
(display sometimes still flashing). If the tuning dial is turned or the radio is turned off then
on again the display flashing ceases, the radio can be tuned and continues to operate absolutely
normally from then on.

It sounds to me like some part of the frequency synthesiser reaches a certain temperature band and
then packs in working. Once through that temperature band it works properly.

Has anyone any knowledge of the problem on this rig and how to fix it.

Best regards and 73's

Mike Crossley.

I can't believe somebody would pay nearly $2k for a radio and think
the first thing they need to do is get it to transmit out of band -
and especially that they'd try some mysterious modification from an
"unnamed source"...

Must be that a lot of you fellas have considerably more cash to waste
on this hobby than I do... ;-)

Besides that, I have yet to see any legitimate need for tranmistting
outside the amateur bands (unless your CB buddies are waiting on
you...), except for MARS/CAP use, and if I'm not mistaken, most
manufacturers will make the mod for you if you show that you are
authorized for those frequencies. I guess maybe everybody but me is
in MARS...

The ONLY legitimate need I have ever seen for modifying a radio to go
out of band was for a 2m all-band transverter that required an exciter
that could generate and receive from 14 to 16mhz (I would imagine that
extraordinary precautions would have to be made to ensure no signal
leakage on the HF frequencies). Never got one myself and with the new
radios not having transverter ports it definitely isn't worth the
trouble to modify the radio for DC to light transmit. Now DC to light
receive is another story... :-)

73!

THE TUBE MAN
850 386-2729
850 386-2560 FAX
RH3333@aol.com

I currently have over 150,000 new tubes in stock including Transmitting, Receiving, Audio, TV, Antique, Ceramic.

I do not have a Web Site nor a price list. Suggest that you Email/FAX a list of the tubes that you are looking for as well as a quanity of each needed. I will check my inventory and advise you of current availibility and cost.

Also have a good supply of tube tester, tube caddies, and used tube equipment.

Thank you for your interest.

I did NOT know it but this radio can be switched from FM mode to AM mode for the entire VHF band. Evidently I presshed the tuning/mhz knob longer than I should have (1 sec) and it switched the entire band into AM mode. I knew that it switched to AM mode in the AVIATION freq range of the VHF band but did not know that the entire band (ham freqs too) could be switched.

There should be a BIG warning label in the manual for this, but I had to read every page and found just one short reference to it. It was not listed under the audio section or the troubleshooting section in the manual where you would think it would be!!

838. FT8000 Software mods

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <6gfokmtsa1@news01.btx.dtag.de>
Source record: 147717

```
Software mods for the YAESU FT8000 - version 1.00, 08.04.1998
-------------------------------------------------------------------

With this procedure the upper and lower limits for the VHF and UHF can
be changed. You can expand the RX and TX range without opening your
FT8000. But you need the ADMS 2D programming Software to be able
to download and upload the data to the FT8000.

This mod can be performed on any FT8000, it does not matter what
hardware mod you have or what country configuration you have.

This whole process is 100% reversible, you need only to reset the FT8000
to get your original state back.

The differece to the mods for the FT50 and VX1R is that the ARS will
still have your country band plan, the same as the software mod for the
FT8100.

Every limit has 3 bytes, they are written in the .RDF file, and are
written in HEX code nummbers, so for example 2AB980 is 280.000.0.
You can use the windows calculator to calculate the frequences.

The limits for UHF are at the adress 0630H in the .RDF file, and
the limits for VHF are at adress 0730H.

The limits are in the following order
- rx lower limit (adr+0)
- rx upper limit (adr+3)
- tx lower limit (adr+6)
- tx upper limit (adr+9)

This are the values for a stock USA FT8000

RX lower limit RX upper limit TX lower limit TX upper limit
-------------------------------------------------------------------------
UHF at adr:0630H 2A B9 80 C6 5D 40 41 9C E0 44 AA 20
(2800000) (13000000) (4300000) (4500000)

VHF at adr:0730H 10 C8 E0 2A B9 80 15 F9 00 16 95 40
(1100000) (2800000) (1440000) (1480000)
-------------------------------------------------------------------------

So, now you can easy change the limits for TX or RX according your needs.

So for example if you change the TX limits to be the RX limits.

At adress 0636H change from 419CE044AA20 to 2AB980C65D40 for UHF, and
at adress 0736H change from 15F900169540 to 10C8E02AB980 for VHF.
```

Edit your .RDF file, make the changes described above, and upload it
to your FT8000.

The FT8000 will now try to TX everywere in the RX range. The possibilitys
have to be explored.

This way you can also change the limits for the RX, the possibilitys have
also to be explored.

I don't own a FT8000, so I can not perform the tests. A friend have sended
the the .RDF files, I have modified them, and he has tested the results.

Unfortunatly he does not own a Frequency counter and a Wattmeter for
UHF so the results can not be accurate tested.
According his scanner the FT8000 is TXing also aprox. 800-1350 ??????????

It would be nice if someone with the right equipment can examine all RX
and TX possibilitys.

A great thank to Barry for sending me the .RDF files and testing
the results.

Greetings, ...

839. WTB Junk Icom 27H 2 Meter

Hi,
I have a Icom 27-H that is working fine, EXCEPT the LCD display. I am unsure if the problem is in the display or the chip that drives it, however if you have an old unit that failed for some other reason that it sitting around in you way, just taking up space, and otherwise annoying you (or your YF), this could be your OPPORTUNITY OF A LIFETIME, YOU may HAVE ALREADY WON!!! (Oops, forget that part about winning, I just got carried away, you didn't win anything, and I am sorry that I brought it up.) Nevertheless, perhaps we CAN help each other out by me sending a little money your way and you sending your junk my way. Plus, we can keep one radio out of the local landfill and HELP SAVE THE EARTH FOR OUR CHILDREN AND GRANDCHILDREN!! (Yea! That's the ticket. Yes it IS hyperbole, but in THIS case, it is at least TRUE hyperbole.) ;->

Thanks for reading this. Even if you have no interest, I hope you enjoyed my bs.

Best of Luck & 73,

Don W9DEW

remember: this is a hobby, this is only a hobby, it is supposed to be fun, don't screw it up.

Message-ID: <352bad9b.0@news.nova1.net>
Source record: 147730
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have a complete PRC-47 set that has been given the LSB modification to work on the Amateur bands. It covers 2-10 Mhz, so covers 40 and 80 meters. Comes with (all original and in VERY GOOD shape) whip antenna, dipole antenna, stand, ground plane, headset/mike, instruction manual and power cable. All you need are 2 car batteries (I'll throw 2 new ones in if you pick it up in Dallas) to provide 28 volts DC.

Works great! Really great for setting up in the field or for taking to the weekend house.

Neat and clean unit. Dimentions are approximately 1 foot tall, 8 inches wide and 20 inches long.

These were used as HF rigs in Korea and Viet Nam. Typically mounted on a Jeep, or lugged around by a Marine.

Will sell for $300 OBO. You pay shipping from Dallas.

electronic mail to gkitto @ pobox.com (remove spaces to avoid spammers).
Or Call 972 - 383 - 7507.

858. Help With Midland CB

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: Robert Switzer <rs2@mink.mt.att.com>
Message-ID: <352BBD7D.C54902A2@mink.mt.att.com>
Source record: 147737

I just acquired a midland 77-104 cb (used...very) and have a problem:
when keying down the microphone, the transmit leds light up, and a weak
tone is generated out of the speaker. Sometimes the tone is a series of
clicks. Nevertheless, the on-air report I get is that my voice is barely

recognizable and sounds like garbage. Not very technical, I know.

Any ideas as to where to look? I haven't opened it up yet, but thought
to ask before proceeding.

Thanks for any and all help...
Robert, KA2CZU

p.s. any 11-to-10 mods for this rig?

I can sympathize with the fellow complaining about the price. While I'm not upset with the price of the '847 per se, I am having a hard time finding a non-cw only or QRP rig to be my first HF, though they seem to be plentiful used. Then again, being a high school student, my budget is smaller than I would like.

Maybe they would. Without the price/performance competition from Japan,
they could charge $5,000-8,000 for a medium performance transceiver and
thereby make enough money to stay in business.

Of course, we would be the ones having to pay those prices while we fondly
remembered the good old days when we could buy top performance for less
than $2,000.

Yeah, Larry, but *why* were they "forced out"?

For the most part it wasn't price competition, though some of the Japanese
radios were a bit cheaper. The main reason was that the old line US ham
manufacturers didn't adopt new technology rapidly enough. For the most part,
they lost their market because the Japanese were introducing fresh new designs
while the domestic producers weren't. (And I'm not claiming that all the new
designs were *better*, but they were fresh and exciting, and they attracted buyers.)

I have a simple answer for that one: It's fun! (modifying, not TX illegally)

Why do Americans buy cars capable of 140 MPH? It's nice to know you could do
it if you wanted to or needed to in the MARS/CAP case. I have absolutely *NO*
problem with hams modifying their equipment as long as they don't break the
law. What's wrong with a little tinkering?

Yes, you should know a bit more about hamming before you spend your hard-earned dough. As a fellow "new" ham (about 1 year!) I can heartily recommend a yaesu FT-50RD. Boy are they *snazzy*!! They have many features to cover most of your needs to start out, in fact they have more features than any other handheld.

You'll learn quickly that no radio on god's green earth is perfect, they all have they're nuances. However, The only major complaint about it is some people find it hard to learn to use, but that's to be expected with such a sophisticated device. It does have 2 other bugs that I know of: the transmit audio is a bit quiet but fixable, and the manual mentions automatic transmition of recordings you make with the digital voice recorder (cool, very cool), but it doesn't work. It's not too hard to learn, most people can handle it ok.

The manual is good, and once you figure out how to work your favorite repeaters or satellites (yes, you can work the space shuttle, MIR, and AO-27 with it!), you'll be able to figure everything else out.

I know someone somewhere is going to disagree with me but, I would bother with any other handheld.

Price is about $360 and includes everything you need to get started.

To start out you may not be able to afford that much money. In that case, Try and find a simple used handheld. It won't be as cool as the FT-50 but it will get you by until you can afford something else. You should be able to get one for a bit less than $100, ready to operate.

Hi,

Can anyone recomend any good radio covering 50-180Mhz on the FM band.
2-5W output is a minimum.

885. Help Cool Blue Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <352cc976.938313@news.mindspring.com>
Source record: 147833

I just had a Cool Blue Kenwood V7 put in my friend's car, by a company that has been installing Motorolya for 40 years.. It is running with the remote head and remote speaker.
It sounded fine for about 30 minutes while I was trying it out and setting up some local repeaters.

All of a sudden the audio became very mumbled and lower in volume. I tried disconnecting the external speaker from the radio and it sounded the same at the radio, but with higher volume. We have the Weather service here on 165.55 and they usually have a very good signal to compare to. It sounded the same on several repeaters too.

Is it possible that the radio decided to die, just a little (in the audio dept)? Could it be anything that I did in the setup menu? I looked but did not see anything and I have also looked in the manual. No troubleshooting hints on audio problems.

It seems to me that a safety issue my be the root of this question.

I could be that the uhf caused body heating at a faster rate than
VHF for the same power!
Cost of building higher frequency devices sometimes limit
building
standards too.

Just a Guess!

Dan,
I have to second Don's comment. I had a 101ZD year's ago that I bought new and wish I had never sold. In any case, when I bought it, I did NOT purchase the optional fan tha mounts and gets power from the back of the rig......it drifted like crazy. I bought the optional fan and the problem went away. Try and get the optional Yaesu fan....your prblem should go away.

BTW... I have since purchased a mint 101ZD WITH the optional fan...no drift problem.

Hope this helps.

From: mailfrmpa@aol.com
Message-ID: <1998040802203601.WAA16909@ladder01.news.aol.com>
Source record: 147836

Been a long time since I did any CB conversions, and, really, an HR2600 is a much better way to go, but here are some tips.

Yours seems to be a simple crystal multiplexing scheme. The 10.14 group is probably subtracted from the 37MHz group to arrive at the desired frequency. Because there are fewer of them(at $15 or so each), I would want to do the conversion by changing them. Calculate how far up you want move up, and add this to arrive at the new xtal freqs. Typical is 1.335 MHz. So 37.65MHz becomes 38.985MHz.. Now subtract each of the 10Mhz freqs to find out where you will be.

Because there are so many crystals involved, I think this is a poor candidate for conversion.

paul

hello-
i cannot over-emphasize the *excellent* condition that both of these
radios are in... the FT-2500M could be re-packed in the box, with all
original packing, etc. and *could* be sold as brand-new in a
store..... *it's virtually new*! -- the FT-11R is "pristine"/"mint"
and has incredibly low hours... the cleanest that i've every seen;
because it's basically been in storage and barely used at all......

why am i selling these? *because i don't use them* i'd rather
someone have them who would.......... my interests lie elsewhere....

** so, i welcome your inquiries, as i'd really like to ship these out
as soon as possible.... here's my lowest price [i hate to go this low
for equipment in this shape, but......]

FT-2500M "new"/in box -- $225 shipped

FT-11R "mint"/in box -- $175 shipped

or $400 for both with Larsen 1/4 wave duckie {brand new, shipped
directly from Larsen} and Larsen 1/2wave glass mount ant.

make an offer! serious inquiries only, please reply directly to:

"nemo0@mindspring.com"

thanks and 73

>Something is not right here!A new FT 1000mp is about $2800at any supplier.Whats
>wrong?
==========
Nothing is wrong. The radio being advertised is almost fully loaded,
whereas the $2800 MP has 3 fewer filters (at about $150 each), no mike
(about a $120 item) no external speaker (about another $160 or so),
etc.

A fully loaded MP with all of the accessories goes for about
$4k.

903. Help needed: Motorola Spirit radio charger

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-08 00:00:00 UTC
From: dddavis@atl.mindspring.com
Message-ID: <6gf2tnskv1@camel15.mindspring.com>
Source record: 147851

The church I attend has a pair of motorola Spirit "green dot" radios. I agreed to try to put together a simple charger to run off 12VDC in a vehicle. To this end, I borrowed the wall wart charger. As I recall, the output was 12.5V or some such, unregulated I'm sure as all these little cubes are. I say "as I recall" because I have misplaced the wall wart. Not only have I not built the "mobile" charger I promised, but I have lost the one they had. Help like mine they can do without.

To redeem myself (no pun intended), I need to replace the wall wart and build the charger I promised. Can anyone confirm:

(1) What is the voltage and rated current of the AC charger as supplied with these radios?

(2) If I supply 12VDC, do I need to current limit it to prevent the batteries from overcharging? In other words, is the current limit with the wall wart just a function of it's tiny capacity or is there a real charging circuit in the radio?

Thanks in advance for any help!

regards, Don (KE4KYO)

I have now traced it to the LAN coax cable shield, which runs through the building, and must at some point be picking up mains voltage. Here in Europe mains are 230V, but I have measured the voltage between the coax shield and the case of my computer (ground) and I get 170V a.c. - weird things going on. Maybe it's to do with the cable impedance of 50 ohms.

One of the best places to tap your audio is on the "high" side of your
squelch control one side is close to ground the other is high. DO NOT tap
the center or wiper of the pot.

>Am looking for a Yaesu FL-7000 HF Amplifier in excellent condition.

These amps are pretty bad. I had one (the 2nd version with the 4 buttons on the front). Unless you have a Yaesu tranceiver, they will overload and the protection circuitry will go on as soon as you start transmitting SSB. For CW they aren't too bad though. Make sure that the one you buy has been "brought up to date" by Yaesu. There have been about 4 factory revs of these things. I found that I was better off with my Kenwood TL-922A.

Most marine supply companies such as West Marine, Overtons, etc carry it.
Starbright is the brand name which is most common and Overtons lists it as
Cat 28039 for $5.99.
Their phone number is 800-334-6541. I have dealt with them before and was
quite satisfied.
I use it to weatherproof coax connectors and it works quite well.

Like yourself I have been unable to find it in hardware stores and have
heard that there is no such thing made.

Good luck....Dick...K7RNZ.

Our local Coast to Coast store carries StarBrite. Also 3M makes a product
called ScotchCoat that is the same but can be bought in larger containers.
Also, you might check out the local Electrical supply house that serves
your electrical contractors, they often use this product for hard to reach
or large conections.

"Forced out"? I would say they *relinquished* the market to the competition. The companies you mention, as well as the car companies (GM/Ford/Chrysler/AMC) and the camera companies (Kodak) and the consumer electronic companies (RCA/Sylvania/GE/Magnavox/Motorola), had most of the advantages (large capital base, intact infrastructure, large domestic market, booming consumer demand) post-WWII versus Japanese industry. The Japanese had two more questionable "advantages" (cheaper labor and a clean slate). We all know who did better now, in large part because of American complacency.

BTW Drake and Collins still exist - they just chose to leave the ham business to the Japanese and went on to other markets, though Drake has started re-introducing some products for SWL/HAM use.

Actually, the UHF Spectra is only available in 403-433, 450-482 and 482-512 MHz splits. The only Spectra that does the 440-450 MHz ham band out of the box is the 15 W Motorcycle radio that covers 438-470 MHz. Modification to make one of the higher power units cover the ham band would require not only software changes, but also changes to the VCO hardware.

VHF splits are 136-146 and 146-174. As I recall, the 146-174 won't go out of band to cover the 145 MHz repeaters (at least I never got mine to go there).

A comment on "you can't go back". There is nothing that prevents a
ham from going to Radio Shack and building a comparably simple rig to
what was common in the 40's through 50's for beginners and homebrewers.
A few 2N2222's, an LM386, an IRF810, and the appropriate R's, L's & C's
(all stock at RS) can be used to put together a direct conversion or
super-regen receiver and a basic 2-5W transmitter. $20-50. Get a
Digi-Key or Mouser catalog and the choice of parts, and thus the
performance, can be increased to more easily build superhet receivers
and higher power level transmitters. $30-100. Circuit complexity
hasn't changed that much just because we have transistors instead
of tubes; while $1 IC's like LM386 audio amp's, 78xx voltage
regulators, and NE612 mixers reduce the component count significantly
and deliver better performance than discrete.

The main problem is that many ham's *expectations* of performance
(sensitivity and selectivity in large part) and features (vfo's,
T/R switching, multi-mode/multi-band operation, keyer, vox, memories,
etc) has increased so that the basic rigs aren't popular any more.
Another aspect of the problem is that phone is now predominantly
SSB not AM, which makes a voice transceiver enough more complex that
it is more appropriately a third or fourth project rather than a
first or second project. A CW transceiver is still the same
complexity as back then, but the reality is that CW is just less
popular with beginning hams than it used to be.

This is in effect why a large amount of homebrewing activity seems to
be coming from the QRP ranks these days. QRP'ers have reduced their
expectations for extra features and are mostly interested, or at least
willing, to operate CW as well as low power. Since CW has a few dB
advantage over SSB/AM that also helps against the low power handicap.
Maybe we need a series in QST on how to put together basic power

supplies, transmitters and receivers that operate in the Technician bands built only out of RS parts.

I think you're over stating the Collins and Ten-Tec. I won't disagree that
modern receivers could improve but I have a hard time agreeing the Ten-Tec
and Collins are superior or any other radio of that era. after having both,
and along with the FT1000, MP, 775, Drake C line, Kenwood 940, FT-1 ect and
others, I think the selectivity in a Collins S-line is NOT as good as the
FT-1000MP or Icom 775. The Ten-Tec stuff is ok but believe me its no big
winner in my book in a lot of areas, such as frequency calibration,
stability, dynamic range, ect ect and I don't consider this bells and
whistle stuff... I'm sure not sold on the Collins and Ten-Tec as providing
that superior performance. Sorry.

I went through this exercise with my FT2500. It blew my mind to find out Yaesu used incandescent light bulbs to light up the display; I guess I expected them to use something that would last ten years or so. Anyway a 272-1092 from Radio Shack worked well. They draw 60mA not exactly the same as the Yaesu part (maybe 80 mA) but I couldn't tell the difference.

I get to do this project again becasue another one went out on me. I should have replaced them all at the same time!

Source record: 147544

Crossband repeating in one direction means that when
you come in on 440 and crossband repeat out on 2 meters
it does not come back in with the reply from 2 meters , and
go back out on 440.... that is one way crossband repeat...
The 733 dualband mobile will crossband repeat both directions.
you go in on 440 simplex and it will repeat your transmission
thru to 2 meters and if someone replys on 2 meters to you,
it will crossband repeat the reply from 2 meters back through
the radio back out on 440.... Comprenday...
K5JOE
Also the 847 only monitors one band at a time... bummer...

If your need for liquid tape is to insulate or weatherproof
outdoors, I can give you an alternative recommendation:

Scotchkote Electrical Coating by 3M Corp.

This liquid insulation dries into a really tough strong
and liquidtight seal around splices, connectors, etc.

I have used it to waterproof connections that are under
230 ft. of water...

It is used by electricians and is commonly available at
electrical supply houses which cater to the trade.

This is no surprise to me..... Larry is a first class guy. I bought a used 2m mobile rig from him off the net two weeks ago. I had previously sent him my TS-830S for a re-tube and check out and he did a great job. Glad he's getting some notice here..... What impressed me was that I have called him several times by phone for tips and advice as well as asking numerous questions over the past year while learning more about rigs and repair. He has always taken time to reply to my emails and speak with me on the phone and has been very helpful.... a real "Elmer"... something that seems to be a dying art these days. I know he's going to have a booth at Dayton....look him up.

I agree 100%. I also sent my FT-101E to Larry Tucker at SandHills and he was more helpful than anyone else I have ever dealt with. I specially liked the full progress reports he sent me while the radio was being worked. He also saved me some $$ on parts he had on hand and I didn't have to get from other sources. If I remember correctly you Al, was the one who gave me his e-mail address. This is not a paid commercial ad, it is just a very satisfied customer.

Thanks Larry.

Thanks Al.

>73 de KF4UAE
>KF4UAE@qsl.net
>chia@korrnet.org
>John R. Alley

Well, it was not an easy choice but what I ended up doing is going to a store and, since the people selling them didn't know much about them, made them break out the user manuals to both. I spent about an hour reading through them and then got the FT-50. However, that might not be the end of the story. These things are not that expensive and once I learn how to use this thing I may not be satisfied with just one radio. I may end up buying a new one each time my wife goes out of town.

Thank you to everyone who responded. If anyone else wants to ad to the discussion please feel free. Although I have already bought mine I'm sure there are others who might benefit from this thread.

I think I have been cloned.....

and my clone's name is Ken Koury

You did exactly what I would do and your contingency (to buy the other radio
if you tire of the Ft-50) is right on the button.

Good luck and enjoy the radio. Dont forget to check out the FT-50 web site
at http://members.aol.com/aeimn/ft50/index.htm.

That sounds logical, move the price up to make the rig appear better. Never thought it was so easy to improve a rig. This must mean I can tell people I want $2300 for my Hallicrafters SR-160 and it will then perform better than the Icom 746?

Gosh, what you can learn by watching this NG.

T7A was not designed to demodulate Wideband FM at all, you are trying to hear 100 KHz-150 KHz wide signal with a narrow FM receiver. That's why it sounds so scratchy, and there isn't much you can do. T8A can receive WFM, as well as AM and NFM.

The intent of extra taxes is true but supposedly only for those ISPs providing Internet telephone service. However if your ISP gets dinged for a access fee to local telco like every other tel service provider currently does, they no doubt will spread the wealth amongst all the customers er go your rate go higher and higher just like the Cable rates do (ah be it they were supposed to go down)

990. FT-50 battery charger

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-09 00:00:00 UTC
From: fighterfire <fighterfire@email.msn.com>
Message-ID: <#o4beIBZ9GA.219@uppubnews03>
Source record: 147590

I recently bought a FT-50 and am a little mystified about something. In the manual it suggests charging the battery for 15 hours. The battery is the 9.6v 650ma 5w version. The output of the stock charger is 200ma. I do not see the need to charge for the full 15 hours. What I am wondering is:
1. Has anyone experimented with the charging times to see how long is really necessary. I have only had the radio for a few weeks and have not yet been able to experiment?
2. Does the radio itself lower the 200ma current before sending it to the battery?
3. Has anyone had a problem with frying a battery while operating the radio from external dc?

It seems to me that the current of the wall wart is excessive for a slow charger and that less time is really needed to obtain a full charge. Any ideas would be appreciated.

Thanks and 73,
Chris F.

Message-ID: <6ghimamlk4@server.cntfl.com>
Source record: 147613

We are taking bids from interested buyers for this fairly new
equipment in very good condition. System consists of two terminal
sites and eleven repeaters on factory racks which were recently
removed from operation.

System is 2 GHz HSWO analog.

Models are FAS2000 radios, include ARDAX model 701A orderwire, Larse
A90-1242A0401 Alarm panel, Grainger MUX (19 shelves, 86 modem cards)

Larscan 1000 Alarm Control Unit
Andrew 8 foot and 10 foot grid antennas and mounts

The system comprises a complete 13 hop analog microwave system less
batteries and coaxial cable.

All electronics are stored in dry warehouse in north florida. Antennas
are located elsewhere but are removed from towers.

Interested parties please send e-mail for comprehensive inventory.

Buyers will be expected to arrange for own inspection and
transportation of equipment. Terms are cash.

System will not be parted out, offers for complete system only please.

> to ask before proceeding.

This may be a mic problem. Many radio's get this problem with age and heavy use, especially in the hands of a smoker, or dusty areas.

You may want to get someone to look at the mic connections in the mic itself, or check the connections within the connector.

Other possibilities is that the radio is experiencing a Hi-SWR... otherwise known as "Standing Wave Ratio".

You may want to try the following:

1. Measure your SWR with an SWR meter. If the ratio is less than 1.5:1 you should be ok. (lower the better though)

2. Check your coax connections. Re-solder if nessesary.

3. Check coax for breaks. Replace if nessesary.

And the last idea I have is tbat your SWR may be ok, however your radio is picking up it's own RF, basicaly RF is getting back into your radio.

Solution is to make sure your antenna ground is different from your radio ground. They dont "have" to be seperate, but better if it is. Also, if you have a mic extension cable, you can try removing it. Sometimes mic cables act as antennas, picking up RF, and bringing it back into the radio.

Try to sperate the antenna from the radio as much as possible. The further away from eachother, the better.

Hope this helps!

>KI7EW

Hey CJ, Don't you think your being a little hard on the kid.
I also think fondly of the good old days but what can you do, ya
can't go back. I know that back in those days you remember having fun
putting together a rig but I bet you would have given a lot to have
something better. What you did, you did out of necessity. You also
probably had an elmer to help a little.

To me, A kid these days that's into radio instead of drugs, guns and
having babies is a good thing. Encourage him/her or better yet, help,
be an elmer and I think that will help you enjoy your hobby again.

Don't sell out, give it another chance.

From: cdorn@gpu.srv.ualberta.ca
Message-ID: <6giecp$r2u$1@pulp.ucs.ualberta.ca>
Source record: 147629

Hello,
I am trying to decide between some of the newer rigs with 6M coverage.
I currently own an Icom 706, and want something larger and easier to
handle. A stronger HF receiver would also be a plus. Is the Icom 756 that
much better than the less expensive Kenwood 570S? I am considering basic
operation here, and not as concerned over contest stuff. When I look at
the respective reviews, I don't see a huge difference except for blocking
figures. Could someone share their experience with either rig to help me
make a choice?

Thanks,
Chris VE6RDC

1009. FREE in St. Louis- VHF Amp

Newsgroup: rec.radio.amateur.equipment

Last chance on the amp. Important visitors next week- it's got to be
out of my office. It pains me to throw good equipment in the dumpster!
If interested, you should call now...

Free: 100+ Watt output Motorola 150MHz tetrode amplifier (includes one
8560AS) and power supply. Rack mount, not huge, should be working.
Schematic not available.

Pick-up only in Downtown St. Louis, MO, between 8am and 3pm, Monday
through Friday, except holidays. Call me for directions.

Take it my way, and it's free.
If you ask about a schematic, add $20.
If you ask me what kind of tube it runs, add $20.
If you ask me if it works, add $20.
If you ask what days or times you can pick it up, add $20.
If you want it delivered locally, add $100.
If you ask me to ship it, add $200.

1010. Re: 706 MKII vs. TS50S

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-09 00:00:00 UTC
From: Phil Wheeler <w7ox@ix.netcom.com>
Message-ID: <352CC809.7CFD1570@ix.netcom.com>
Source record: 147631

Mark,

I've used both. Move from TS-50 to 706MkII was driven by need for a removeable front panel in my (now permanent) mobile installation; the TS-50 does not have that feature.

I mostly operate mobile on 20 SSB, with a separate tri-bander for FM. I liked the TS-50 and like the 706MkII more. I believe the noise blanker in the 706MkII is better than the one in the TS-50; but I've never done A-B tests, so this is subjective.

Other plusses for some are:

o 706 has 6 meters and 2 meters (I have not used these yet)
o Soon to be available DSP add-in for 706MkII (at $150 or so)

For me the main factor was the ability to remote the radio in my small car.

1013. A job well done! Rig (FT-101) Repair

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-09 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <6gimub$786$1@nnrp1.dejanews.com>
Source record: 147634
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.cb

I found a repair facility which repairs and restores radio
equipment! I was impressed with their web page and the
approach of restoring radios, not just repairing them.
It appeared to be more than just a repair shop.

I sent my FT-101F to Sandhills Technical Service Inc in
Candor, NC for repair (speech processor) and an alignment.
Their web page is: http://www.janrix.com/sts

STS seems to stockpile equipment so finding original parts
is easier (and cheaper) than the factory- especially with
the FT-101 series of the early 70's. My FT-101 was not a
new "face" to them. They have worked on many...

Larry, N4KVP did an EXCELLENT job in repairing, cleaning,
and aligning my rig. I had a fax with the costs and prices
before work was performed. The rig was back to me a few days
after I gave the go ahead. The only surprise was how well the
radio looked and performed. I asked to have him clean the rig
while they had it, and yes, it is cleaner than I have EVER had
it. I called him back to get his "secret", because I collect
FT-101 equipment and want to apply the same techniques to the
rest of the station.

I just wanted to post this note because I have read many horror
stories about repair, costs, and lack or original parts. I will
be using STS in the future.

Best of 73,
Al, NW2M

PS: The radio Larry repaired is in the photo on my web page:
http://www.qsl.net/nw2m/ft101.html

PPS: Their full snail-mail address is:
Sandhills Technical Service, Inc.

Agree. Just look at the front panels from the Japanese rigs. None
over here can compete. That's a sad thing to see, me included, when
the first impression is drawn on B's&W's but not really how a radio
sounds.

Unfortunately, good companies here are so often being bought out.
The whole schema thing of the coorporate restructuring drives more and
more HAM friendly businesses out of the picture. Heath and Collins
are two prime examples.

Many Japanese companies have government capital injections on R&D,
like SONY, HONDA, and etc. I won't be surprised if the big 3 have
some degree of such capital. This kind of companies are not
non-existance here in the US, but their dollars are spent on military
things rather than on consumers and needless to say on HAM's.

Best 73!

The price of the IC-756 shot up because Icom raised the price not Texas Towers or any other dealer. HRO and AES are still at the "1999" because of the stock they bought before the price increase months ago. So if you want one you need to get it before HRO and AES sell all the low priced 756's.

Then again, being a high school student, my budget is smaller than I
>>would like.
>Look for a nice Kenwood TS-830S. For $500 or so you will have a great
radio that will do just about everything you ask of it. You don't have to
buy new to get a nice radio.

Great advice from Dick. Also may want to look at the Icom IC-735 for abt the same or possibly a few $$ more. TS-830S has a better receiver but the tube driver/output may put off the younger generation of hams. The 735 is smaller (will need an external power supply) and is all solid state and will receive general coverage too. Icom made them for many years. There's several other radios that come to mind also. Feel free to contact me directly if you need opinions on radios and/or pricing. Have fun with the hobby- it's been one of the few stable things in my life and even though I've gone through periods of inactivity, I always come back ! Lots of different things to do within one hobby. I'm 50 now but remember a 10th grade english paper I wrote- " Amateur Radio, The King of Hobbies". I still feel that way 35 years later. Don't pay too much attention to the naysayers and the grumpy old men ! 73, Brian K3USC-Erie,PA

That's all true EXCEPT the "Elmer part." I certainly don't want to "go back" to those days in any respect. However, I think we need to revisit the concept of what it means to "have something as a hobby." Even the kids themselves say that they are "into" something or the other. Well, being "into" means LEARNING, and I think we who claim to be "into" ham radio must help others realize what that entails. When you make telephone calls, it means you're a telephone "operator" but NOT "into" telephony!

> To me, A kid these days that's into radio instead of drugs, guns and
> having babies is a good thing. Encourage him/her or better yet, help,
> be an elmer and I think that will help you enjoy your hobby again.

To me, a kid that's "into" radio instead of whatever is a good thing ONLY if he/she is helped to LEARN the fundamentals, rules and responsibilities of amateur radio. Kids do need help understanding what this is all about, and how it came to be. As far as "helping," I have done my share of that, including making sure my three kids understood what ham radio required of them... and not one of them ever got a license! I'm VERY proud of that since they were NOT willing to do what was required!

> Don't sell out, give it another chance.

Too late for that! I've had an most enjoyable 45 years of ham radio interest and fun. I can't bear to watch what's happening to the hobby, let alone participate! I'm not angry about it, just resigned to the "winds of change." Also, I would find it incredible and intolerable that a person who's "into" automobiles and licensed as a "master" mechanic didn't know what a piston was!!

> I plan to go to a local Belton Hamfest being held next week.

> First on my shopping list is a 2 meter rig,

You should be able to get some good prices there. If you can, go for the mobile first and then the HT. You can set up the mobile as a home station without too much effort. At this point stay away from the low power HTs that are being offered at most hamfests for low prices. There are several new hams in our area that have gone this route and most of the time they are very noisy. If you must get a ht for your first rig, get one that will give you 1-2 watts on it's battery and at least 5 watts when running off of 12 volts. If you are going to use it mobile be sure to get an external antenna.

> followed by a good
> key for CW (and possibly a keyer).

To start out just get a cheap straight key. You can get one as a key/practice oscillator combo to practice sending. Remember you probably won't have to send when you take your test. When you get on the air using CW try using the straight key for awhile. It is actually easier to use a straight key at low speed cw then a keyer and it will help you develop a nice clean fist.

> At this time I doubt that I
> could afford a HF receiver or transceiver.

While your at the swapfest check out the older tube type cw/am transmitters. Just make sure they work before you buy them. Some of them can run into bucks trying to buy new tubes for them.

> I've been interested in a kit from Ten-Tec (Model # 1253) which
> is a 9 band regenerative shortwave receiver. It is only $59, so it
> is in the right price range. I realize that it will not be as good as
> the big commercial rig, but it may be a good economical start
> and I get the fun and pride from assembling it myself.

YES! You are correct in that it won't have all of the features of a lot of the other receivers being sold. But, it will be a ball to build and use. Combine it with a moderate transmitter and you will have your first cw station.

> A friend of mine suggested that I jump directly into assembling a
> QRP HF transceiver kit, as it will be in my price range and
> gives me added incentive to upgrading to tech plus as quickly as
> possible.
>

That is also a possibility. But it will be easier to make your first contacts running a little more power on HF.

> My question is, whether my plan is good and reasonable,
> or whether there are any better alternatives. Thank you for any
> advice you can give me.
>
>

Sounds like a good approach to me Paul.

You also might want to check into getting one of the Ten meter ssb/cw rigs for your first hf rig. This will let you operate on hf phone and cw. Ten meters will be getting very good in the upcoming months and years as we go into the next solar cycle.

1038. RE: FT-50RD vs. IC-T8A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-09 00:00:00 UTC
From: chia@news.utk.edu
Message-ID: <6gj08j$2um$1@gaia.ns.utk.edu>
Source record: 147659

Hmm, well, I do like the FT-50 from yaesu, but the one thing that
it doesn't have and CAN'T is the 6m band for TX (FM only). Now I know there
will be many FT-50 fans out there bash me and call me mean names, but I
prefer the Icom IC-T8A over the FT-50, I mean yeah teh FT-50 has lots of
bells and whistles, and tons of cute little features (that MOST people will
NEVER use!). So I myself prefer the IC-T8A there are many mods to allow
FREEBAND TX (not just MARS, and CAP) And it has a GREAT reciever in it, as
a matter of fact it has better sensitivity that the FT-50 and the tiny
little VX-1R!!!

So, choose whichever YOU want to get, but if you don't know what the
6m band is then you may not want to buy a radio just yet.

Try this: disassemble radio and remove the coil cans in question, one by one, dont mix em up!. Use a solder sucker iron or you will destroy them! The "screwdriver" slot is also on the bottom side, which IS accessible on those coil cans! Simply unscrew them, throw away any crumbly bits, and reinstall them upside down. (The cores, that is). Realign the set and your'e back in business. Almost every one in my HTX'es is very near, or at, the top of the metal housing, so that is where you should probably set them when starting the alignment.

I have a absolutely like new Icom 756 for sale. It has the warranty card, original box, and all original accessories. The microphone still has the protective plastic cover in place over the nameplate. This radio was purchased new in December from AES. It cannot be told from new. It was purchased by a Tech and it was never transmitted on!

Call me at 419-433-2930 or email

>I looking for a set of 900 Mhz duplexers. 25 MHz split.
>
>Is there such a animal???

Must be, I have a number of Grainger duplex radios that use
26 MHz split duplexers (no trouble to retune them for 25 MHz
split, but the radios that use them will require a crystal change
to use a 25 MHz split. I don't want to sell the duplexers separately,
but if you want one or more of the radios, I'm willing to talk. They
make nice low power repeaters. Or you can use them as duplex
data links (their original purpose).

I have 3 watt units in pole mount cabinets and also 15 watt
units in standard rack mounts. (The splits are inverted between
the two kinds for duplex data use.) The pole mount units include
a Lambda 110 VAC switching power supply. The rack mounts
don't have power supplies included (will run on anything from
12 to 48 VDC, I have some suitable supplies). This is late 80s
early 90s equipment with MESFET front ends. I have manuals.

I also have a number of Motorola MR9600 radio sets with
very nice big 6 cavity DB Products duplexers currently
on a 5 MHz split, but you can retune them to whatever you
want that's wider. This is late 70s vintage heavy iron. Includes
the *big* Motorola AC supply, Micor UHF strip and a tripler
to 900 MHz for Tx, Micor VHF strip and a downconverter
for 900 MHz Rx. Mounted in Telco style 8 foot frame racks
(two radios to the rack). No manuals.

All of this is good stuff, removed in working condition
from a power company switchyard control network.
Priced to sell. $100 each plus shipping for any of them.
(Shipping will be considerable for the MR9600 radios,
they're big heavy suckers, even when split out of the
racks.)

Looking for an adjustable attenuator upto 100dB . It's for amateur radio
transmitter hunting so it would be for VHF frequiencies. It would have to
be small enought to use with a 2 meter beem and a hand heald radio.
Some have a rotary knob on the end and others have 6 to 7 switches.

E-mail with price Thanks

>any web site for reference?

They're all good, Joe. It just depends on what you like. I have a VX-1R, and
I like it for the use to which I put it. I wouldn't consider it a general purpose
HT, but I use it with a dualband mobile rig setup as a cross band repeater.
That makes it very useful to me when I'm away from the car. A FT51R or
FT50R would be a better choice if it is to be your only radio. Icom and
Alinco also make suitable radios. I'm not a fan of Kenwood VHF/UHF
equipment, but they have units that will suffice too.

I normally wouldn't recomend a HT as your only radio. A mobile/base
rig is much more capable. But considering your location, a HT may be
all you need. All of the manufacturers have websites giving details
on their equipment. Remember that you're reading sales literature,
but the specs are pretty truthful.

811's have a metal plate that is fairly easy to demolish with improper
tuning. The 572B is a carbon plate version of the same tube and the
carbon plate is almost indestructable. They are exact replacements for
each other in the vertical configuration, horizontal you need to watch
the orientation of the plate. Otherwise have fun.

E F Johnson Desk Kilowatt transmitter with EF Johnson Viking Ranger exciter. No desk, RF pedestal and exciter unit only. Good condition, has been in storage for several years. Comes with operating manual.

This is a true vintage piece of AM/SSB equipment. Designed to operate at ONE KILOWATT of high level amplitude modulation. RF unit is continuous coverage from 3 to 30 Mhz.

Price is $3500 for both units. Will consider trades.

Michael-

If you can get the Tandy service manual for the HTX-100, you may find that manufacturer's part numbers are available from the Uniden company. Uniden made a couple of very similar radios, the HR-2510 and HR-2600.

Being realistic, I expect you will be more successful by attempting to rescue the existing coils. Using a substitute slug if necessary, you most likely can tune up the rig. If any given coil doesn't tune within its range, try a different substitute slug. BE VERY CAREFUL AND ONLY USE PLASTIC TOOLS ON THE SLUGS!

The Spectra I am using has a 144/145 repeater programmed in it
and it works. In checking the software, that I have, it will
go down as far as 142Mhz. Anything lower gives you the invalid
warning.

I have the older IC-706, which replaced a TS-50S. The newer 706 has some improvement, but in my opinion, the TS-50S is still a better radio. It may be lacking in features, but it is better in performance. I haven't gone back to it, only because I want the Six Meter capability.

I keep hoping that Kenwood will come out with a new small model with HF+6, but they don't seem to have it in their plans.

OK. Looks interesting, though it is a crippleware test version for shareware that must be paid for and registered.

I could find no point anywhere at the web site that indicated what the shareware price is to register this software if I went through the trouble of downloading and testing it and decided to keep it.

Can you post that information here as well, please? We New England yank's are usually reluctant to buy a "pig in the poke" and time is a very valuable commodity.

Well, now that this workhorse is officially gone, what will Yaesu replace it with? the 847, or something new to compete with the 706 Mk2, or another 757/890/900 based radio with a little DSP chip in it?

Is this true for the MARS/CAP mod and the "Free" mod, for just for the
"Free" mod? Others are telling me that the MARS/CAP mod still works when
junper 1 is removed...

My comprenday is not so good. Is it possible to use my 2 meter HT to repeat out of the rig onto HF? and then listen to the HF reply with my HT? I guess not. But if this cannot be done, then what good is one way cross band repeat? Why would it be used at all? Are there reasons for one way cross band repeat?

1086. WTB Dead HTX-100 (3)

The really BAD coils in this HTX-100 are:

FT-2 (triple coil set in the upper right corner, going front to back)
L317 (VCO coil on the PLL/micro baby board)
L1,7,8,12,13 and L26 the rest don't look great but I hope they are
still intact and just need a new slug.

If anyone has a chassis that they want to part with I'm still looking.

It does sort of read like you need two 'Kenwood' HT's -- which doesn't
make any sense to me, since I assume you control the radio using
touchtones on the remote HT. Does anyone out there actually own
a 'sky command' system? It is definately an oddball product.

Freeband is a slang term used by CBers for the freq outside of their
legal operating range. They use this range of freq anyway, all the
way from 25.000 to 30.000. If you were as active on 10 mtrs as I,
would could see that they have no regard for the amatuer service or FCC.
Truckers ragchewing in the middle of the DX window, Taxis using 10
as their own business band ect..Most of these junk modified rigs come
from Taiwan, but are sold wide open in the US by Copper Electronics.
They openly tell you to modify ur radios and have a blast,regardless
of who you are infringing on..Bastards should be shut down PERIOD..
My opinion only..hope others feel thre same...Johnboy KD4AFW

Hello All-
I'm looking to sell a mic I have in hopes of buying a mic (JT-30) for blues harmonica . The mic I currently have is an Astatic D-104 with a T-UG9 Stand. It's chrome and I believethey call it a "Silver Eagle". The stand has an amp built into it, along with a volume control. I was thinking of hacking it apart and trying to make it into a blues harp mic. But, it's in such great condition that I couldn't bear to fix something that isn't broken. So, I'm asking what it would cost me to buy a mic that I want, $75.00 or best offer.

I think to transmit on 440 mhz you should have the odd
split in the UHF band. You can have both vhf and uhf freq.
in the vhf band to monitor, but to transmit on a uhf freq. you
have to be in the uhf band.
That is just what I read the other day in the newsgroups.
Its worth a try anyway...

The first contour setting is fully adjustable via the menu system, the other
three are fixed.

>
>Finally, how well does it work (is it AF DSP, I think so?). Comparisons
>to the 756 or 870?

Don't know about comparisons betwwen the 870 and 756 but the 990 with a 59+
was not even close to the MP.

I've been in 5/5,5/7 QSO's and had people slip within a khz away and could
easily take them out without degrading the audio of my contact.

It's AF.

Today's young people have computer skills that absolutely dwarf the skills of the average old-timer ham. Sure, they would rather spend the time learning computer skills than radio theory. This is because they wisely perceive that computer skills are in much greater demand in the workplace, and, in fact, have immediately usable applications in school and other things. 45 years ago, radio skills were a good meal ticket. No more. The cutting edge is computers, and this is right where our young people can be found. Nothing wrong with that, or with them. Or with our hobby, either.

The Electron Tubes Online shopping (ETOLS)
http://www.halfin.com/shop

Halfin's web site has been completely reviewed.
The ETOLS online shop has been redesigned to offer you a better utilisation comfort.
Now, the shop contains more then 500 types including the 300B from Western Electric
and each week, new items will be added.

The Etols team is working to provide you with online information about tubes presented.

ETOLS is the first Electron Tubes Online Shopping facility on the Internet offering direct buying with Visa and/or MasterCard.
http://www.halfin.com/shop/index.htm

Further to our survey, it appeared that most of you found the minimum order amount of 100$ too high. That's why we have reduced it in order to comply with your request.

ETOLS is not just a shop. We would like that this site to become a real center of reference for tube lovers. This project can only develop with your participation. The members area provides many links to interesting Web sites containing Data Sheets, technical informations, useful software, fonts, symbols and advise to everyone from beginners to experienced users.

Our links page is fully interactive and you're kindly invited to enter your web site if it is related to electron tubes.

Our guestbook is now automatically updated with your input.
Don't hesitate to give us your appreciation.

The members subscribtion is totaly FREE and any tubes lover opinion will be appreciated.

Gateway Electronics, Industrial liquidators are two surplus stores in San Diego. Their addresses are in the phone book. Although its not a surplus store, there is a Ham Radio Outlet in the same part of town.

1118. A few questions on the FT-847....

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-10 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <6gl8o2$d4i$1@geraldo.cc.utexas.edu>
Source record: 147479

Greetings all-
To the few of you who have 847's...could you shed light on the
following?-

Does the rig indeed TX on 2 meters and RX on 144mhz for Russian sats?

Does the rig cover the FM portions of 2mtrs and 450?

Does the NR DSP work on FM or AM mode?

Please add any other observations you have...

Thanks!

Source record: 147481

Chris-
The little 570 is a good deal...thats about it. It's
DSP is not as good as the 756's...in fact, you can dial
in a little DSP noise reduction (-10db) and forget that
it is even on...it is so clean (on the 756). I sat with
the TS-870, IC-775, and IC-756- and I walked out with
the 756. Sure - some of the novelty of the display was
a big factor. The truth is though- that the display
usefulness has increased- not decreased- since my
purchace. We users have found several interesting ways of
using the display....including using the IF tap output
on your other radios- fed into the aux RX antenna input
so you may use the 756's display for your other rigs!.
It really is a matter of money. You won't be able to work
any more stations on the 756...but you will enjoy using
the 756 more...and you will gain "sight"- which you will
never be able to do without in a HF rig again.
Remember, the net allows a vocal few to malign a rig
disproportionately. The 756 has suffered from this effect.
It is not a perfect radio, but is does deliver serious
pleasure of operation- and is a rig you will enjoy
firing up for a long time.

take care-
Bob

When you get the radio as is, there's no different between the 2nd and the 3rd generations of them. Yaesu just "fixed" the new one so that the old tricks of expanding the RX and TX range won't work.

>would like.

You've sort of answered your own question. Buy used. There are a number
of somewhat older rigs which still do a very credible job on HF. My personal
favorite is the IC-735. It had the longest production run of any amateur radio
ever. And with good reason, they did it right the first time. There are other
older rigs which are also still well respected. ARRL has a book out with
their reviews of most of these radios. It is a good way to quickly come up
to speed on what's on the used market that you might want, and what you
might want to avoid. (I must say that QST reviews are less than brutal,
however, so calibrate your yardstick by considering faint praise to be
utter damnation when it comes from the ARRL.)

It would be interesting to see how this done. I have heard
about cloning CelTels but never have I seen it done. Also
I am interested in were to buy the equipment.

The reason for wanting to know more is simple. I doing computer
security it helps knowing how to hack, how create viruses. You
can not defend against an attack if you do not know how the attack
is accomplished. I know how to write viruses, how to hack into a
system. I now need to learn the CelTel fraud is done.

I bought a HTX-100 at a hamfest and found out that EVERY
SINGLE COIL had its ferrite slug damaged or pushed to the
bottom. I'd like to find someone who has a HTX-100 that's
dead because of semiconductor faults. I have contacted
Tandy and found that they stopped restocking the replacement
parts for this thing a couple of years ago. If you have a radio
that may fit the bill please email me with your price.

I have looked into removing the coils and unscrewing them from the
bottom. Some can be done others actually have a bottom that
prevents ANY access. To make matters worse the wingnut that
messed this radio up didn't stop at just breaking the ferrites. He
went so far as to drill out the broken ferrites and totally trash the VCO
coil as well as a few others.
The point has been made that the HR 2510 was also made by Uniden
and probably has the same coils. Well that's true but in my case the coils
that are trashed aren't used in the 2510.
I thought of buying both service manuals and comparing parts but
at a cost of >$50 for a radio that is only worth $80 I thought again.

Such a wise and well-written reply deserves acknowledgement! It all rings true, allexcept the last sentence! I concur with your assessment of the current state of affairs
regarding the interests of today's youth. It is precisely what I mean! Computers may be

considered a "hobby" to some, but the majority of the population views them quite differently. If you compare "retention of the existing knowledge bases," old-time hams knew just as much as today's computer buffs! The SAME discipline required to be "into" computers, to learn how to control and operate them, has been eliminated virtually from

amateur radio.

If you visit most of the computer-related NG's, you find an amazing level of acquired expertise, addressing issues far above "basic differences between a floppy and a hard drive!" Here, and on other amateur radio NG's, I see regular requests for information at the level of "difference between a vertical and a dipole" from amateurs brandishing licenses far beyond their expertise and interest. Sadly, that shouldn't have happened. Amateur radio and I reflect our ages and abuses... we've both seen better days! Thanks for your reply!

1139. WTB: USED RS POWER MICROPHONE

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-10 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <6glocb$1bd$3@clarknet.clark.net>
Source record: 147500

Hello. I&#65533;m interested in buying a used RS power microphone. I&#65533;m interested in the one that appears on page 63 of their 1998 catalog. It&#65533;s #12 on the page. The number listed for it is 21-1177. Perfect cosmetic and working condition are a must. The original box, owners manual, or 9 volt battery would also be nice. Please let me know what you have and what your looking to get for it.

I'm looking for a used 2m/440 mobile rig, as new as I can get for a reasonable price. Cross-band repeat would be nice, but not essential if it adds a lot to the price. Anyone looking to sell a radio in good condition please e-mail me with as much info about it as possible. Will probably buy within next couple of weeks.

Thanks,
Rodney - KF4COV

>Why has the price of the 756 shot UP to 2300 at TexasTowers??? Could
>they be raising it because the 746 won't sell so well (if the 746 is
>1830, and the 756 is 1999, people will drop the extra 170...).

Icom officially raised the price about $500 give or take at the beginning of the year. This was apparently to position the 756 as between the 746 and the 775 and put some pricing headroom above the 746 as you suggest. Apparently they feel the real-time bandscope and in-band dual-watch in the 756 is worth a lot more than the 2M band in the 746. Otherwise, they appear to be similar radios.

>Mind you, the price at HRO and AES is still the same... 1999.... just
>wondering though...

They probably still have units they received under older purchase orders with Icom in stock. When the order committment at the old price runs out, they will have to raise the price also.

1155. TM-V7A Crossband?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-10 00:00:00 UTC
From: Mark Kieffer <kss@mninter.net>
Message-ID: <zUdX.56$x2.837642@nntp1.nac.net>
Source record: 147595

Has anyone had success getting the crossband functionto work? I've studied the manual over and over again, and think I'm using the right key combinations. It makes no difference whether I set it up as a "locked repeater" or crossband repeater. All I can get it to do is repeat out on VHF what comes in on UHF. If I understand the manual correctly, in the crossband mode, the radio should repeat out on VHF what it receives on UHF, and vice versa. What am I doing wrong?
Thanks.
Mark

John....

Spectras any split but the 482-512 can be put in the ham band.
You just need the correct RSS. I know 1 working 430-480 and another 136-176.
But againg the correct RSS is needed.
Finding it is the hard part.
i always ask why can't motorola make their 450-470 radios go a little lower
from the factory...?

According to Icom last month, the 756 was always intended to sell in $2300. range; however Yaesu 's 920 at 1800. price range changed that. Now that Icom has the 746 to compete against the 920, Icom reverted back to original price structure

73,
Jim.

I believe "freeband" is that area above the legal Citizen Band frequencies around 27MHz and just below the bottom end of the 10M ham band (28MHz) where US illegal communications proliferate... and much worldwide legal communications take place.

CAP is the Cival Air Patrol which has several channels available near ham bands for their use in search, rescue, etc.

MARS is the Military Affiliate Radio System, again a bunch of frequencies just outside the band edges of several ham bands, and in which amateur radio operators and military operators carry out communications of a public service nature, such as the running of phone patchs for overseas military personnel.

I have for sale a IC-706 and AT-180. Includes items below:

IC-706 MKI
FL-101 CW filter 250Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

AT-180 (auto tuner HF+6M)

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $1150.00 for everything. I will pay shipping lower 48 states. For another $150.00 I will include a Timewave DSP 59+ (latest software). Unless it is sold first. I can be reached by E-mail or my phone number is 216-741-4717.

I will think about spliting up the 706 and the tuner.

I have gotten a couple of things from Austin Radio in Texas, with no problems. I found their prices to be among the lowest, and everything has shown up in a week. Since they are out of state, I didn't have to pay Ca sales tax. I always now call them first.

1177. Best filter for digital radio???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-11 00:00:00 UTC
From: electron78@aol.com
Message-ID: <1998041117360800.NAA10854@ladder03.news.aol.com>
Source record: 147317

I am working on a wideband QPSK digital receiver and transmitter, and I don't want to distort the digital signal unnecessarily and cause a high bit error rate. What type of I.F filters could someone recommend (Bessel may have a flat group delay, but its skirts are way too wide). How tight should the filtering be as a compromise between noise bandwidth and group delay variations? Could I use Butterworth filters with 20% wider bandwidth than the modulated signal? Are there any other filter considerations I need to know when using digital signals? Any help at all is most appreciated!

Mike

1178. FS:Yaesu FL2100B Amp

A simple question for you.
Why, with their multi-store buying power are they among the most
expensive dealer chain in the US?
Do the jap companies offer quota discounts similar to auto dealers in
the US?

>ERIC.

I did see those points marked TD and RD... According to my schematic they
are connected to the ctcss board as well, so who really knows...

I'd be happy to write some software if I had the hardware to do the job...
But I need to have the info on just what protocols would be needed to
work with whatever hardware is used.

Such as cloning... I don't exactly know what format the dtmf info is sent with.
Is that in the service manual?? If so perhaps I should get one then. Monday,
I think I'll e-mail Kenwood and see what I can find.

I suspect it's the 'California sucks' factor. Higher taxes, higher
wages, higher rent higher everything.

1198. New FT-50 And Mods

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-11 00:00:00 UTC
From: slmayt@aol.com
Message-ID: <1998041121344300.RAA14498@ladder03.news.aol.com>
Source record: 147338

The new generaton FT-50's Cannot be modified to recieve in the cellular bands due to a new CPU being used.Neither hardware or software mods will work.Also,the 200-300 mhz band willl not be displayed either,however,thru software mods,you can change from Band A1 to A3 and enable from 230 to 300mhz.It will not go below 230mhz,but with the software you can program below that.For example,I like to listen to TV channel 13,which is 215.50 mhz.By using older versions of the ADMS software,I can program anything below the 230 gap.Mods for the software can be found at various websites.....Hope this helps..N4VGW

If you dont mind cutting out part of the insulation in your helmet, try using the yh-1 headset from Yaesu. You will have to wire up a ptt, though. All that consists of is a 2.2k resistor and a 0.001uf cap across the mike connections and then close one side of the mike to ground to tx.

> Tim KU8F
Hi Tim,
The Kenwood mod is done by removing the top and bottom covers, then
gently lift the six plastic tabs that hold the front control panel in
place.
Be carefull not to put any strain on the two ribbon cables connecting
the main radio and the control board. Now look for the brass colored
grounding clip, about in the center of the control board. Remove the
chip resistor thats closest to the clip. (on the right side of it) This
mod will enhance the xmit and recieve. GOOD LUCK

Is anyone out there aware of a "new" 10 meter all band like the Uniden HR-2510, or similar rig. It is time that one of the manufacturers gets on the sunspot cycle bandwagon. I am looking for the all mode version as I am looking forward to working 29.4 and 29.7 MHz FM. I may even get my old BC-1335 running again.

Kenwood TS-440S/AT. With the following:

PS-50 Heavy Duty Continuous Duty Power Supply
Factory Service Manual
Original boxes, manuals, and accessories
Great Shape! Immaculate front panel, only one scratch on top
Excellent working order
10Hz Display

Will schedule QSO to demonstrate the excellent audio of this rig.
This is a great performing radio, and is perfect for an affordable HF
station!

I am looking for comments on the IC-207H
but I have a particular question.
what is the transmitting power on high?
is it 50W or 45W?
I am looking over the specs which has it listed at 45W
but it also states that it has 4 power settings per band
50W, 20W, 10W, & 5W
I would really appreciate it if someone can clarify this for me.
thanks!

Thank you all for the information you gave me.

I did find the above mentionned Liquid Tape at my local electronic parts
store called Matteau ï¿½lectronique in Trois-Riviï¿½res.

I tried it last night and it works great.

Again, thanks a whole lot.

The only good crossband repeat in one direction would be ok,
is if you were going from 440 to 2 meters and had a dualband
HT to listen to the reply from the 2 meter station that was transmiting back to
you...
K5JOE

1234. Re: Yaesu FT-847 Comments?

Message-ID: <6gmods$cul@nnrp3.farm.idt.net>
Source record: 147374

You can complain all you want about no two way cross band repeat. The radio does not do it.

However the Kenwood HF only rig will allow you to uses some sort of adapter interface in their HF only rig which you can hook up a hand held to and do local cross band repeat with another like hand held. You can see it on the Kenwood site.

Of course that interface lists for $1000!

And the radio costs more than the 847 and does not have all the bands the 847 has. Plus you have to buy 2 of the hand helds that work (if I read the page right). So there is you capability if you can afford it.

BTW no other HFs are supporting even one way cross band repeat are they?

> My comprenday is not so good. Is it possible to use my 2 meter HT to repeat
> out of the rig onto HF? and then listen to the HF reply with my HT? I guess
> not. But if this cannot be done, then what good is one way cross band
> repeat? Why would it be used at all? Are there reasons for one way cross
> band repeat?

Looking for a small 300 watt antenna tuner with built in swr and
wattmeter. Something like an MFJ Versa Tuner or similar. Physical
condition is unimportant as long as it works ok. Please email me with
what you have and your asking price.

You might try Tandy Leather. They sell all types of leather. You can purchase same and make your own. Unless you are looking for the stitched cover type, they are very easy to construct - just several layers glued together, looped, and rivets.

I can make them - but it would be much cheaper to do it yourself. One other point, be sure to put the ends in place before closing the rivet.

I would guess freeband is anywhere in the frequency spectrum of the radios limits. CAPS is the Civil Air Patrol operating on specific out of amateur band frequencies. MARS is the Military Affiliate Radio System, a U.S. radio network affiliated with the military. They handle traffic for service people to their families and are prepared to help in emergency communications. They also operate on non-ham frequencies.

>Some have a rotary knob on the end and others have 6 to 7 switches.

You can't really use a 100 db attenuator with a HT, Greg. The HT's
shielding isn't adequate to give that sort of isolation. About 60 db
is all you can practically employ with a HT for DFing. Beyond that,
direct signal leakage through the HT case will dominate, and the
directional effect of your beam will be lost.

There is another way. QST printed the article and FAR circuits
has the circuit board for an electronic attenuator which works
a different way. The attenuator consists of a mixer and a level
controlled oscillator operating on a low frequency (in the range
of 100 kHz to 1 MHz). This mixes with the fox's signal and produces
an output shifted from the fox's frequency. The HT is tuned to that
frequency, so it won't hear the fox by direct through the case leakage.
The output of the LO is controlled, and that controls the output of the
mixer to give you any degree of attenuation you want. Slick.

Due to illness in my family and needing to move I'm trying to sell my entire shack. Some pieces have sold and this is basically what is remaining. If you are interested in some very, very good equipment; please believe me it is in excellent condition and well cared for; give this a look and/or tell your friends. No one will be cheated!!!

Any of you who loves the hobby would understand that this is a difficult time and experience to be faced with and I have no desire to hurt anyone by pushing off this equipment and have no hidden motives other than those expressed here!!!!!

Yaesu FT-ONE HF rig. (top of the line in it's time...$3000.+) Dual metering and dual digital displays along with 12 separate LED status indicators. 24 keys including a numerical keyboard, split frequency operation, scanning and 10 VFOs operable, multy tuning rates to 10 Hz, automatic mic gain control, noise blanker, RF speech processor compression level, SWR meter adjustments, FM squelch, key speed, vox gain and delay & PIN attenuator as well as the usual controls....100 watts capable. Has operation and tech. manuals!
COMES WITH a Drake WH7 wattmeter, Yaesu SP102P Phone patch/Speaker, MD-1 series desk top dynamic microphone, code key and all recently factory upgraded, serviced and tuned.....radio works on 220 or 110 v. also includes headset ear phones, filters.

Pakratt232, Model-232MBX t.n.c. with AEA software.

HF & VHF/UHF Dummy Loads.....misc. lengths of very good coax, side mount brackets for tower which allow you to add additional antenna.....

Diamond X200A 2m/70cm dual band high performance gain vertical base station antenna.

Lot of books (ARRL Antenna and Hand Books plus many more).....practice code on AEA codemaster, model mm-2.....or homemade key practice setup, extra speakers, and lots of misc.

Everything but the Drake meter has manuals/paperwork!!

Willing to make a package deal for someone interested in all of the items listed!!!!! $1350.00 gets it all!!! There is a treasure chest of misc. items alone!!!!

Thank you, please contact "rcbaum1@enter.net"

Has any one had any luck converting a Ritron rpm 50 to 6 meters ?
I get VCO lock at 50 mhz, but not at any higher frequency
I have tried tuning but no help
Manual is on order BUT they are very SLOW

Thanks in advance,
n1jkv

Is the FT-847 worth it?

2m 440, 6, FM & SSB + a Hot HF receive.

DSP Filters D Notch and D noise filter.

Satellite operation.

Dedicated Mobil antenna available.

Dedicated base tuner available.

Sub band and lots-O nifty operator conveniences.

Perfect? No radio is. But I dont know of anyone else offering more for this price.

Hey there...

I have for sale a pair of Motorola Spirit Single Channel Monitors which look like pagers. Model A903JVC2468AC. Both are currently set to 138.325 MHz N-FM Mode. Previous user: South Carolina Naval Airforce Base (didn't say exacly which one). Both come with a mini 1.3 Volt Rechargeable NiCAD and a beltclip, plus a charger for the batteries. They both work fine, and look just like pagers. I think they can probably be adjusted for any freq in the 138-174 MHz range, if you have the skills. Asking $45 for the pair and the charger. May consider a trade also. If interested, please email me. I am in the Philadelphia, PA area. Thanks.

I don't know if the book I am going to recommend has been up-dated, or if it is still available, but here goes:

The Buyer's Guide To Amateur Radio, by Angus McKenzie MBE G3OSS, published by The Radio Society of Great Britain.

My edition is 1986. It covers alot of gear, both HF and VHF/UHF. It also has a good beginning section full of alot of useful ham-type info. Obviously, its limited in that it does not cover the current gear, but you will find, for example, TS-940, IC-730, S-Line, Drake, and others.

Another source of info are the equipment reviews done in the various ham mags. Keep in mind, however, that the mags don't like to criticise the products of companies that buy the ads, so you have to read between the lines for comments like, " Out of the box our new..... did not meet the FCC's requirements for spectrial purity, but a call to the manufacturer brought a quick fix." Only if you don't have expensive test equipment, and labratory skills, you may never know that YOUR jewel is a piece of crap!
My other favorite dance done by the mags is, "We were assured that all susequent shipments of the new ..... will incorporate these engineering changes to avoid any continuation of the problem." Except, of course, for all the product alrready in the distribution pipeline, or on dealer's shelves!

Good hunting!

I don't know that model, but there two or three possible damages.
1) Any troubles with ground cables in the microphone.
2) Bad conections of ground in the tranceiver, (printed circuit broken).
3) Audio IC with damage.

If you have any experience with a VOM meter, you can to test the
microphone, and you can to look at the printed circuit, but in the
third option you need a technician.

Irv,

Shackmaster was made and sold by Advanced Computer Controls (ACC) who went out of business about two years ago. If I remember correctly, ACC discontinued the Shackmaster a couple of years before their demise.

When ACC closed down, their assets (primarily the software used in their line of repeater controllers) was purchased by Link Communications, located in Billings, Montana (http://www.link-comm.com). Perhaps one of the devices Link manufactures would work for your friend.

Keep an eye on rec.radio.swap. In the last year or so, one or two Shackmasters have been offered for sale.

What I am wondering is how well the "slope" filters help/work on SSB signals. I am already assuming that it can kill general backround noise. How well do the slope filters work on SSB, if someone is a few Kc's above you, will you be able to wipe them out? (assuming no front end overload).

Source record: 147247

I did not see the message you were replying to but I just got my FT-50 in March and it has a SN starting with 7F200xxx. I did the mod myself and I removed jumper number one and one resistor which was in the row above the solder jumpers and is resistor A and is all the way on the left. I then turned it on while holding lamp/ptt/knob. It displayed BAND= A 1. I then held knob for 1/2 sec. and rotated to display BAND=FREE. Then I shut off the rig and turned it back on. Tx on mine is basically 136-230 and 300-500 approx. I found this info at http://ns1.qsl.net/ke6vvw/sykes.txt

I hope this helps!

ThaBronx1 (thabronx1@aol.com) wrote:
: any models with the sn of 7lxxxxxx can't be modified!!

Actually, MARS/CAP mods are still do'able-and while band-free seems to be gone, if other countries band plans are available(either from the front panel OR by patching the .RDF file), then the radio will still do quite a bit.
As for the cell block...this is less important then it appears to be...
1.the FT-50 does not really perform well on cell freqs, even if modified(yes, it WILL pick SOME calls, particulary if a suitable antenna is used).
2.Even a STOCK FT-50 will receive cell about as well(almost NO difference in performance) as a modded one.
Just take the cell freq, and add 90.2 Mhz to it, and key the result in...(45.1 is the 800 second IF, and 90.2 is the image location).

ALINCO DX77 vs DX70

No six-meters.
No TXIT.
Keyer comes standard (No message memory).
No detachable control-head.
No SSB filter.
LCD and heatsink are the same.
No option for mobile bracket.(Has holes for a bracket though).
No Auto Power Off.
Priced about $200 more then DX70.(Can't be! Ought to check this again)
Price may come down in future but still doubtful whether its worthwhile.

PS CW sounds like square-wave

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and

enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94 about W5VVI. If you think this guy is benign, think again. What's going on right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur,rec.radio.amateur.equipment

I plan on installing an Icom dual band (2m / 70cm) on the boat this season, and am looking for ideas on what to use for the antenna. Obviously beams and ground planes are out.

It's a small boat, 20 feet, and the antenna will be mounted on an aluminum 't-top' about 7 feet off the deck. Ideally, I'll mount the unit on a stock 'ratchet' mount allowing me to fold it down flat for travel and storage.

Any help or real-life experiences would be appreciated.

Hello All:

Thankyou for reading this item. I am asking for $115.00 plus a few dollars for shipping and insurance depending upon shiping mode and location.

I am selling a new Radio Shack Power Amplifier. Perfect for mobile and stationary use. Catl. No. 19-1122. Some Features:

o 30 watts output
o Low Noise GaAs Field Effect Transister (FET) pre-amp
o Accepts 0.5-5 watts input
o Double Tuned Helical Band Pass Filter cuts intermodulation distortion - This is a must
o 13.8 Volts Direct Current

Originally, I purchased 2 amplifiers for 2 cars and only used one. This one is brand new, Never Used.

I've wanted to find a good 6 & 2 meter all-mode rig but it seems like all the new gear is either HF up to 6 meters, and then 2M to 70 CM and beyond. The sunspot cycle will generate some good DX on 6 and also some possibilities on 2, bit I'd like to have one rig covering both freqs.

What is out there now that would fill the bill? I'm mainly interested in SSB, FM and packet. Any ideas??

73,
Ron R., WA5VFA

The 599Y is quite similar to the 599zx. The 599zx is a marvelous addition to my station, and one I would not want to be without. It makes the hetrodynes on SSB disappear, and the narrow CW filter cuts out all the garbage. In my opinion the RTTY filter can't be beat. I am very satisfied with mine and as I said I wouldn'tn want to be without it.

The new FT-847 may be appropriate:

100 watts on HF+6; 50 watts on 2 and 440.

All modes on all bands.

The IC606MkII also has 100 watts on HF+6; but only 20 watts on 2 meters. Also all modes on all bands (but no 440).

I'm not aware of an 2+6 all mode radios, but there may be some out there.

Ron - You probably would be served well with an Icom 706 that sells for about $725 on the used market. It is a mobile hf rig, but it also has 100 watts on 6 meters all mode and 10 watts on 2 meters all mode. You can get a Yaesu 736R used for about $1400 with 2 meter, 6 meter, and 430mhz all mode. The FT736 does not come with 6 meters standard, so if you look for a used one be sure of what you are buying. The FT736 only has 10 watts on 6 meters though and you probably would be looking at hundreds more for a 6 meter amp. 10 watts used to be the standard, but that has changed with all the new 100 watt rigs. You certainly could work a lot with ten watts, but 100 is a lot better. You could look for separate rigs. Reasonable priced 2 meter all mode stuff is fairly available (Kenwood TR751A, Kenwood TS711, Icom 271 or 275), but 6 meter all mode rigs (Kenwood TS60, Icom 575) are scarce and expensive. The advantage is that you can monitor both bands at the same time with separate rigs. By the way I would not count on the sunspots to get high enough to allow good f layer openings on six meters for quite a while yet. The seasonal sporadic e openings should start soon and allow band openings to all parts of the U.S. and Caribbean, but I would not count on working Japan and Australia on 6 meters anytime soon. However 10 meters is already starting to show some excellent f layer propagation. Good luck finding the rig you want. ---- Steve N9ROU

All:

I have a Hewlett Packard LaserJet printer. We have had this printer from new and it's only ever been used in a home environment. It has done less than 5800 pages hence, it's virtually new. It has additional memory, 7.1MB, the Postscript module, and a Jet direct card. It can be used in a Mac or PC environment.

I would prefer to sell locally, within 120 miles of Sacramento and can deliver. I am asking $600.00 or very close offer. Although my preference is to sell the printer outright, I might accept a part trade for a recent vintage Dual Band mobile. However, I do need a minimum of $300.00 cash in the deal!

Please contact Kevin via Internet mail at brumey@ns.net or Phone : 916 632 2658.

Thanks and 73's

Hi there,

I got a RACAL RA6790 receiver from TUCKER about two years ago. It was working very fine and sure brought me a lot of fun in the beginning. But after a few months of not turning the power on, one day (while still in warranty) when I plugged the power source into it and tried to turn it on, I found it was completely dead! The LCD display showed the digits in chaos. Nothing could be heard, nor did the control pad on the front panel.

I opened the cover and found the possible cause. The battery on a PC board (maybe the CPU board, it was located on the right side and inserted vertically) was leaking. After I cleaned up the mess on the PC board and replaced a new battery with the leakage one, it just won't back to life. I am sure the voltage (I replaced with two 1.2V NiCd) and the polarity are correct.

I know I should hand it over to TUCKER for remedy. But as you can tell, I am in Taiwan, to buy a non-amateur-radio equipment is difficult, yet it is more difficult to have it repaired.

Is there any one can drop me a hint to fix this problem? Or just lay it down on floor as a footstool?

Is the CPU board completely dead? Should I turn in the board only, or the whole rig to the State for repair? And where?

73s,
Bear/BV2WC

For Sale

MPAC-----UHF Repeater by Aerotron

This commercial repeater has been retuned to 444.350 transmit 449.350 receive with preamp. Transmitter is 40 watts out, this repeater has been in service in Hatfield, Arkansas for the past 5 years. The repeater has its own power supply 110volt also has CTCSS multiple tone boards. Repeater can be used in PL mode or non PL mode. Also has a complete set of manuals. Repeater does not include duplexers.

I am asking $800.00 for the repeater and I have a 90 watt amplifier that I will sell for $100.00 with the repeater.

I also have a DB 440 8 bay repeater antenna which I am asking $150.00 for with or without the repeater.

Will sell the total package for $975.00.

I will be at the Little Rock, Ar hamfest on 4-24 and 4-25 and will deliver there or you pick up in Hatfield, Ar.
Or call me at 870-389-6516
Thank you George N0EOQ

>The output of the LO is controlled, and that controls the output of the
>mixer to give you any degree of attenuation you want. Slick.

This was one of the first pieces of Real T-Hunting Equipment I built.
Based on, I believe, an article in the 1992 November issue of QST.

Worked great. One problem though: in heavy RF zones, like in a
city, the it tends to make a typical HT's overload problem much
worse. Either the unbalanced mixer [single diode], or the poor quality
of the LO [basically unfiltered oscillator hooked to said diode, resulting
in images galore], or a combination of both conspired to make things
really unpleasant. At times, it converts the normally bullet proof
HTX202 into something worse than a TH-78A.

Still, you can DF right up to the transmitter [eg, metres away from a 50W
transmitter] with such a thing. And the single knob to control mixing
level is a big user-interface advantage over bank-of-switch attenuators.

>Subject: Which better? 706MKII vs. DX-70TH
>
>------------------------------

Depends on why you are buying it. The 706Mk2 is the better radio.
I has the additional 2 meters and some other bells & whistles built
in. For mobile use, the face is just to busy. Too many buttons &
knobs, and the display has too much info to decipher.

If you are looking for mobile, the DX70 is easier to use.

I am going to try to sell my HF rig soon along with my power supply and antenna tuner. My problem is I have no clue what I should ask for it. I am not interested in selling these items over the net but would prefer to sell them locally. The items are only 5 yrs old and only used for a total of 10 hours max. Because I really didn't stay involved in the hobby I'm not sure where to turn to get a good deal.

If anyone has suggestions I would greatly appreciate them.
The items are as follows.
Yaesu FT-840 (paid $830 in 1993)
Astron 35amp Power Suppy w/meter (paid $160 in 1993)
Yaesu MD-1 Microphone (paid $100)
Yaesu MH-1 Microphone
MFJ949E Deluxe Versa Tuner II

Thank you in advance,
Christine Davis Green

The Emporer radios are mail order gimmic junk that have no warranties and don't have any mfgr. info packed with them. Thats right, no phone #, no warranty card, no address anywhere on the box or paperwork. Stick with the RCI-2950, it's backed by a real company with a real service & parts dept.

Similar HF radios can be had brand new now for around $700-900, so ashking
around $400-600 for the radio & mike would probably get a few takers. I
would say ask $60-90 for the power supply and maybe around $50-75 for the
tuner. $700 for the lot is a fair deal. Good luck.....

> > band repeat?
>

Just to give an application scenerio to supplement Mr. Nospam:

First, 2-way corssband repeat is nice, but the rig will probably have to go into 100% duty cycle of operation. The rig will have to be designed to sustain and dissipate a large amount of heat -- the way a regular 2M repeater does. I don't know, but the lack of such B's & W's on the FT-847 have suggested to me that it might __NOT__ be good to do 100% duty cycle TX. If this feature is pruposely removed because of this reason, I wonder how it will survive from a weekend of HF RTTY contest. Hack! Maybe it's a different story on the PA module on low bands.

From the conflict of interest (or conspiracy) department: I think YAESU wants buyers to turn their heads to their repeater products, Vertex, when finding equipment for their "repeating" needs. One-way repeat, in this context, might have been a marketing decision rather than a design and engineering issue.

On the other hand, one way crossband repeat can have it's usefulness, especially when you can receive from a distant repeater output but don't have enough power to obtain a full quiet access. The 1-way repeat can assist your HT to do just that. Having your HT TX on UHF, for example, and RX on the repeater's output. The crossband 1way repeater rig is configured to have RX on your HT's TX frequency and TX on the repeater's input.

You can go fishing and hiking with your 1way repeat rig in the car, which might have a better antenna, accessing to your favorite repeater with your FT-50R. In this case, your car battery won't get drained as quickly in contrast to 2way repeat, plus the benefit of using low power on your HT.

Just my 2 cents worth.

Best 73!

About 15 yrs ago, I had a drake b line. I was doing some work with a theatrical lighting company, and had a bazillion swatch samples of thier plastic filter material. Almost any shade of any color you could imagine. I used some the the mateirial as filters to make my drake dial illumination any color you could imagine. Finally, I found a color that stuck! I believe it was a light turquose color. This stuff was heat resistant, and i will bet whoever has that rig still has the filter unless he doesnt like the color. I also have some rare General Electric light bulbs in 60 watt soft white for sale for only $5 each. I have some Sylvania units for $7.50Don

Source record: 147187

First off I really like mine.

As for the seperate antennas. I'm not sure but I think you can set different settings for the a and b vfo and than run in split operation. Whether this would work for the antenna selection ?

CTCSS encode and decode are standard with the radio. Memories will store frequency, tone and the status of duplex offset. Each band (10m, 6m, and 2m) have menu selections for standard offset. On 6 I have had to use the a and b vfo's and run in split for many odd offset repeaters. The memory will retain all these settings for both vfo's too.

I have not found anything I would call a rough edge yet. A couple of minor ones. When you press the clear button to clear the RIT it also turns off the PL tone setting. But then how often do you use PL tones on SSB. When you enter the Filter mode, to set IF filters, when you press menu to exit and if you had the band scope selected it scans your band pass limit on the scope before letting you use the radio (Only takes a microsecond.

I think the receiver is very sensitive even without the preamp. Given the poor conditions on 10m I can still hear more stations that I can work (Sure wish a few VK's would buy a few of these rigs. All the feedback I have gotten is good. TX audio is excellent with the stock hand mike (SM-8 is going on it tonight).

The autotuner works well. I has able to match a 3.8 swr on 6 meters in about 8 seconds. The tuner does like to have at least 15 watts on 6 to work correctly.

One other minus. Is I wish the 2m and 6m shared the same antenna port, but I can live. Instead 6m shares the HF ports. 2m has its own.

1384. VHF/UHF amp

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-13 00:00:00 UTC
From: Toshi Watanabe <watanabe@Heraldnet.com>
Message-ID: <353265BF.2C9FC0A8@Heraldnet.com>
Source record: 147188

Need recommendation on VHF/UHF RF amplifier.

1) Input frequency 144 - 156 MHz. (Mostly on 144-148,
occasionally 155-156)
Input Power 10-50W
Output desired 150-200W
Antenna is wide-band 144-156 (antenex CW1443)

2) Input frequency 440 - 470 MHz. (Mostly on 440-450,
occasionally 460-470)
Input Power 10-35W
Output desired 100-150W
Antenna is wide-band 440-470 (Antenex CW4405C)

*** It does not need to be dual band.
*** Rugged construction, withstand rough mobile use.
*** It does not need to be specifically designed for these
frequency.
(ie. 144-148 amp re-tuned for say 150 and get less than
optimal efficiency at 144 and 156 or
144-148 amp can handle 156 but somewhat slightly
reduced efficiency is acceptable.)

Any suggestion is greatly appreciated.

1385. Re: ??how is FT-8100?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-13 00:00:00 UTC
From: Ken Bickel <ac4vv@megsinet.net>
Message-ID: <6gtqad$g0s$1@news.megsinet.net>
Source record: 147189

Have the 8000. Two meter side went out under warranty but they fiex it without any problem. The 8100 I believe has 200 regular memories where the 8000 only has 100. The 8000 has two band edge memories per band also (total 108 memories 54V/54U).

The radio does not seem to be as simple to operate as the ads let on, but that may be because I program it with the optional ADMS2 software. I don't believe you could use the advanced features of any of the radios while zipping down the interstate at 50+ MPH anyway!

I have been quite satisfied with the radio. It performs well, has good transmit audio and you can do the rudimentary operations such as start/stop scan and change bands with the mike. I do suggest an external speaker, the sound from the internal one was unpleasant to me.

Apparently the 8000 did not have as many problems as the 8100 as I gathered from reading this news group.

Bottom line - if I had the money I would not hesitate to buy another 8000. I would love to have it in the house where I could excercise all the neat features it has.

NO DSP filter will wipe out adjacent frequency interference that is within the IF passband providing the interfering signal is strong enough to have an effect on the radio's AGC! Ther is NO substitute for good IF filtering (narrowing the bandwidth). The DSP will remove a lot of the splatter, but if the offending signal is REALLY bad, no form of filtering will remove all of the garbage (except HIS "OFF" filter).

My 599zx does a very nice job of cleaning up the junk on SSB signals with adjacent interfering signals. The SSB filter alone is sufficient in many cases to make an SSTV picture presentable when without it I could not copy the picture.

Don't forget, the filter has an AGC circuit also. Even if you have a strong adjacent signal pumping the radio AGC, in many instances the DSP AGC compensates for some if not all of the pumping. I would not include direct conversion receivers in this scenario - if they use audio derived AGC they will pump and NO filter will straighten them out.

Also, no filter will make an SSB signal on a busy band sound like a signal from your favorite 2 meter repeater! However, in my opinion the 599zx is an indispensible asset to my station, whether I am running SSB, STV or CW. As I said before, I would NOT want to be without it.

1387. Re: Yaesu FT-847 Comments?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-13 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6gttda$kjd@nnrp3.farm.idt.net>
Source record: 147191

Had the 847 for a day or two.

Its a nice rig. I went from a mobil TMV-7a 2m & 440 FM and a borrowed Yaesu FT-900 (nice radio) to the FT-847 which gave me 2m 440 and 6 FM and side band along with HF! It pretty much filled all the radio needs in one shot!

The HF receive was my main concern and it works very good. I only have limited HF experience but the radio lives up to (my) expectations.

The DSP noise filter and HI/Lo cut filter seems darn good to me.

While the rig supports 2m & 440 along with the rest of the bands it has different bells and whistles than a mobil dual bander.

You cant listen to 2 bands at the same time. Or scan two bands at once. You can scan the memories which can be on any band. Its more like a table top radio you are going to work band on but not at 60 mph.

Over all I find the radio pretty easy to use. I disliked it for the first hour or two but fell into the groove after that.

I would say this is a good choice for a single radio that can do it all. I had no intent of ever spending the money for a 2m side band radio. But it came with the 847 when I purchased an HF radio. I suspect seldom used side band freqs like 440 SSB will see more activity if this radio sells.

I dont want to leave the impression this is the best radio in the world. We all know better than that. But its a doosey as far as bands and receive go.

I am waiting for the dedicated FC-20 tuner I ordered form Ham Radio Outlet in Deleware. The Tuner tunes 6m & HF. It costs about $260 Bob at HRO says he will get it to me "as soon as possible or SOONER" (when he gets it in). I can always count on Bob.

I use the sub band display as a scratch pad to store freqs in while I jump around the bands.

You can also hit a memory and tune up or down from there.

My only complaint is the built in speaker. Mine seems a little shrill to me. I may swap the built in speaker or go for and external.

Audio reports on 2M are very good as far as output signal quailty. My friends can hear the difference between the 847 and TMV-7. All say the 847 sounds better.

I like it!

Hi John.

Had a similar problem in a 1997 Chevy Astro..... no place to hang a rig.
Ended up having to purchase a 2 mtr rig with a remotable head. Put the rig
in a safe place and mounted the faceplate just below the radio.

Good luck and vy 73 de

Have you connected your 2m antenna to 2m port at the back of the radio? HF and 2m antenna connectors are separate. What about RF gain control? Same control pot can be set up to double as a squelch and RF gain, so normal operating position is at 12 o'clock. I myself have the original 706, it's receiver inside 2m ham band is good, it is not as sensitive outside the US ham band, however. MKII has improved that as well.

I have a Gap Titan. It works pretty well. The only complaint
that I have is that on some bands it sends better than it hears.
That may just be a characteristic of vertical antennas, I'm not
sure, but my G5RV is much quieter on most bands.

1416. HELP: R-5000 computer interface installation

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-13 00:00:00 UTC
From: Walt Novinger <wnovinger@shaw.wave.ca>
Message-ID: <COgY.8250$cN3.404577@read.cal.sfl.net>
Source record: 147261
Cross-posted to:
rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.shortwave,uk.radio.amateur

I have built KC4ES's level converter (QST 9/91) and it is working just fine. I have also installed the 8251 and 4040 chips on the computer board in the rx. I can trace the signals from the computer all the way to the rxd pin of the 8251, but I get no signals out of the 8251. The clk pin on the 8251 is always high (i.e., no clock signal is present).

Is there a jumper/diode/resister that has to be added/removed when the computer interface is installed? I would appreciate it if anyone who has added the factory interface kit could provide me a copy of the manual that describes the installation and other details. I already have the command set courtesy of Rob N7ATM. Any assistance would be greatly appreciated.

73 de Walt

1417. For sale>>Still trying>>Make offer!!???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-13 00:00:00 UTC
From: "Robert C. Baum" <bobbaum@enternet>
Message-ID: <01bd66d0$64bd4c00$24daaacc@preinstalledcom>
Source record: 147262

Please keep in mind that I would like to sell all or most of the remaining available items as a package.....I would prefer not to sell one small item when that item may enhance the bigger package better.....If you are in the market for a quantity of good equipment (almost a whole shack) give this a look and some consideration.....all reasonable offers will be considered!! Thank you!!!!

Due to illness in my family and needing to move I'm trying to sell my entire shack. Some pieces have sold and this is basically what is remaining. If you are interested in some very, very good equipment; please believe me it is in excellent condition and well cared for; give this a look and/or tell your friends. No one will be cheated!!!

Any of you who loves the hobby would understand that this is a difficult time and experience to be faced with and I have no desire to hurt anyone by pushing off this equipment and have no hidden motives other than those expressed here!!!!!

Yaesu FT-ONE HF rig. (top of the line in it's time...$3000.+) Dual metering and dual digital displays along with 12 separate LED status indicators. 24 keys including a numerical keyboard, split frequency operation, scanning and 10 VFOs operable, multy tuning rates to 10 Hz, automatic mic gain control, noise blanker, RF speech processor compression level, SWR meter adjustments, FM squelch, key speed, vox gain and delay & PIN attenuator as well as the usual controls....100 watts capable. Has operation and tech. manuals!
COMES WITH a Drake WH7 wattmeter, Yaesu SP102P Phone patch/Speaker, MD-1 series desk top dynamic microphone, code key and all recently factory upgraded, serviced and tuned.....radio works on 220 or 110 v. also includes headset ear phones, filters.

Pakratt232, Model-232MBX t.n.c. with AEA software.

HF & VHF/UHF Dummy Loads.....misc. lengths of very good coax, side mount brackets for tower which allow you to add additional antenna.....

Diamond X200A 2m/70cm dual band high performance gain vertical base station antenna.

Lot of books (ARRL Antenna and Hand Books plus many more).....practice code on AEA codemaster, model mm-2.....or homemade key practice setup, extra speakers, and lots of misc.

Everything but the Drake meter has manuals/paperwork!!

Willing to make a package deal for someone interested in all of the items listed!!!!! $1350.00 gets it all!!! There is a treasure chest of misc. items alone!!!!

Thank you, please contact "rcbaum1@enter.net"

Racal Communications is in Gaithersburg, Maryland, near Washington DC.
Each repair has a $200 minimum prepayment charge. I suspect that the battery permitted the memory (operating system) in the receiver to erase. I think it will have to be re-programmed.
Tucker is out of the radio business.

Well, the Chicken Banders are flat out of luck with this rig. The MARS/CAP mod is done through a firmware change, by replacing certain E-Proms. According to the folks at Yaesu, they will do this mod free of charge for any licensed ham with a MARS/CAP endorsement upon receiving proof of the license and endorsements when they receive the radio at any of their service centers.

1424. Repair Shop Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-14 00:00:00 UTC
From: "David M. Anderson" <wa6khh@qsl.net>
Message-ID: <6h148e$3f8@dfw-ixnews10.ix.netcom.com>
Source record: 147069

I have an Alinco DR-510T dual bander (about 11 years old). I don't believe Alinco's estimate and am looking for a reputable shop to repair it. The symptom is that the 450 MHz side is dead (no xmit or rcv), however 144 MHz is O.K.

Alinco's service center claims that the final PA stage is bad, which doesn't make any sense to me. Also, I can (almost) buy a new dual bander for their initial repair cost. They stressed that this is an initial cost, not guaranteed to solve the problem!

Anyone have a good shop to refer me to?? A have the "official" service manual from Alinco as well.

From: "Roger D. Rines" <rdrines@pacbell.net>
Message-ID: <35342E66.EB721AFC@pacbell.net>
Source record: 147073

Before you give up on the radio, try these other frequencies.

161.650 161.775 162.400 162.425 162.450
162.475 162.500 162.525 162.550 163.250

These ten frequencies are what are assigned to NOAA weather
channels. Not all are active and only a few are active in any one
area. For example, only two of these are active in the greater San
Francisco Bay Area.

All ten of these are programmed into my TM-V7A but I've only heard
weather on three of these frequencies.

Good Luck!
Roger...

Control head (or "faceplate") can be easily removed from the main 2710H body, there is no wire. Connections between the two are spring loaded pins. In addition, you can get an optional separation cable, and mount the main body under the seat (or something similar), and only keep the control head on the dashboard. In any case, you can always easily stash it away in your pocket when you park the vehicle!

Source record: 147080

I have a Kenwood H.F. rig that is sitting around collecting dust. It needs some TLC. I made the mistake of tuning the radio into a piece of coax with nothing on the end (Sigh). The smell of dying final tubes..... The internal VFO works but needs cleaning, it is intermittent. There is an external VFO that works fine. It has a desk mike with it.
I have not bothered having it fixed because a friend of mine moved into an apartment and cannot put up an antenna. I (being the nice guy I am) offered to keep his TS 140 exercised for him.
I am just south of Boston, Massachusetts and will travel in this area. I will consider shipping it.
I will take any REASONABLE offer, or trade for....Marine radio equipment (VHF, MF-HF, GPS, Antennas, Stereo), Amateur VHF/UHF equipment, or if you have any other interesting stuff

If you have one you'ld like to trade, send me a note.

Thanks,

Rob, KL7NA/W7

1441. Is this really working right??ICOM 706MKII

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-14 00:00:00 UTC
From: k2gt@qsl.net
Message-ID: <37141a37.601209@news2.2xtreme.net>
Source record: 147117

I recently puchased an Icom 706 MkII and found that it doesn't
receive very well on 2 meters as compared to my other rigs, although
there was no difference on the HF bands. The test was simple. I
monitored a swap net the other night on my old Azden, now used mainly
for packet. I used a j-pole and the repeater was about 75 miles away.
Copy was adequate, about mid scale. I tried my 20 year old Icom Ic-211
with almost, but not quite, the same results. Then came the 706. I
could not hear the repeater at all with the j-pole. In order to copy
it at the same level as the Azden, I had to use a 2 meter quad, the
preamp in the 706 AND the preamp in the Mirage amplifier. I had heard
that the original 706 was pretty bad in VHF ranges, but is the MkII
just as bad, or is mine in need of service? Experiences or comments
appreciated........Thanks...gus

Maybe they are trying to get even with you guys for the $285 Kenwood transverter that an Aussie posted here a while back!!

The $285 was plus shipping, duty, etc.

Regards,

Bill

1. Must be in mint condition (or darn close), have original box and all the stuff (manual, stock ant., stock batt) - extra gear a plus.

2. Radio with CAP/MARS mod done is a plus, will purchace un-modified though.

Please respond via E-Mail.

From: tourwing@argohouston.com
Message-ID: <353401b9.3140216@news.argohouston.com>
Source record: 147120

I purchased a TM-V7A new with the modification already made that allowed me to receive/transmit out of band. I've found that the upper frequencies (162.400, NOAA) are just about DEAF! I had the radio checked and found that the receive sensitivity to be very poor outside the Ham Band. Does anyone know if this is common with this radio? Maybe the modification wasn't performed correctly? Any help would be greatly appreciated.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium/K6 computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $225

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $225

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $225.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $225

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that
was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50 OBO

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head (all solid state). High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. several $5 each.

Source record: 147128

Hi Folks!

I want to change my Heathkit GC-1107 digital clock over
to 24 hour format, but I don't have the manual. There are
jumpers inside that you solder to set it to 24 hour format.

If you have one of these clocks or manual and could tell me
which jumpers to solder together to set this to 24 hour format,
it'd make my day!

Thanks!

Scott, ND9C

1453. radio modem for schlumberger multimeters

We are making in new telemetry project then we need radio modems able to read schlumberger multimeters and we want to exchange experiencies with profetionals in this kind of job.

The radio modems must be for read multimeters SQ-400b, Q320 and data transmition in 9600 bps or better in UHF or VHF band at 5 watts RF or better.

If there is someone to know about this technique please write us.
we will be thanked.

From: Mike Morrow <mmorrow@companet.net>
Message-ID: <35336CBD.7EE0@companet.net>
Source record: 147131

E-mail Yaesu (see www.yaesu.com site) and they will send you the
"official" shortened power button. Works like a champ to keep the unit
from inadvertently being turned on, and takes only a few minutes to
install (no soldering). Also, wipe the PC board contact traces under
the new power button with some contact cleaner before you put it all
back together. This will solve the problem of the FT-50 being sometimes
difficult to turn ON with a SUSTAINED push of the power button. (If you
have that problem, but don't want the new short button, take the radio
apart and clean those contacts traces.)

Not unusual. There is probably no one on simplex and you would only hear from about 3 to 5 miles on a good day. Repeaters are probably little used and you might hear them from 15 to 20 miles. 440 is most likely dead in your area so no one to listen to. If you are using the rubber ducky antenna on the HT you are really restricted but even if you put up a good base station antenna you might still hear nothing. You need a listing of the 440 repeaters in your area.

I live 200' from a commercial tower with 9 antennas including buiseness band and sheriffs repeaters.Very few 2-meter radios are usable here because of desense.Radio shack mobile and Icom IC-781 & IC-2000 are terrible.The best I have found is the one HRO recommended in such a situation , Yaesu FT-2500.The 2500 acted as if there was NO interferance present,perhaps the same applies to the dual banders.AB7RS

1469. Yaesu FT-920 - MOD to transmit on CB Bands ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-14 00:00:00 UTC
From: Jim McIver <lussa@lussa.demon.co.uk>
Message-ID: <iYf9OBA$N8M1Ewpw@lussa.demon.co.uk>
Source record: 147145

Hi there all you radio/electronics gurus.

A friend, who lacks access to the web, has asked me to ask for some advice concerning his Yaesu FT-920.

It seems that allow him to listen to the CB Bands but the transmit functionality is disabled in all bands except the amateur radio bands.

Does anyone out there know the mod to allow this inhibit function to be removed ?

I'm sorry if the phrasing of the question leaves something to be desired, but I'm not a radio man myself. :)

Hope someone can help.

Many thanks in anticipation.

Jim

Yaesu FT-ONE HF rig. (top of the line in it's time...$3000.+) Dual metering and dual digital displays along with 12 separate LED status indicators. 24 keys including a numerical keyboard, split frequency operation, scanning and 10 VFOs operable, multy tuning rates to 10 Hz, automatic mic gain control, noise blanker, RF speech processor compression level, SWR meter adjustments, FM squelch, key speed, vox gain and delay & PIN attenuator as well as the usual controls....100 watts capable. Has operation and tech. manuals!
COMES WITH a Drake WH7 wattmeter, Yaesu SP102P Phone patch/Speaker, MD-1 series desk top dynamic microphone, code key and all recently factory upgraded, serviced and tuned.....radio works on 220 or 110 v. also includes headset ear phones, filters.

HF & VHF/UHF Dummy Loads.....misc. lengths of very good coax, side mount brackets for tower which allow you to add additional antenna.....

Diamond X200A 2m/70cm dual band high performance gain vertical base station antenna.

Lot of books (ARRL Antenna and Hand Books plus many more)..homemade key practice setup, extra speakers, and lots of misc.

Everything but the Drake meter has manuals/paperwork!!

Willing to make a package deal for someone interested in all of the items listed!!!!! $1200.00 gets it all!!! There is a treasure chest of misc. items alone!!!!

Thank you, please contact "rcbaum1@enter.net"

1480. Re: FT-50 battery charger

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-14 00:00:00 UTC
From: davem@cs.ubc.ca
Message-ID: <6h0miq$hgl@groucho.cs.ubc.ca>
Source record: 147156

"fighterfire" <fighterfire@email.msn.com> writes:
>I recently bought a FT-50 and am a little mystified about something. In the
>manual it suggests charging the battery for 15 hours. The battery is the
>9.6v 650ma 5w version. The output of the stock charger is 200ma. I do not
>see the need to charge for the full 15 hours. What I am wondering is:

The wall wart power supply is rated at 200 mA. However, if you charge
the battery on the radio, the radio has an internal constant-current
charging circuit that feeds about 60 mA to the battery, regardless of
its voltage (6 or 9.6 V). So it takes 15 hours to charge the 650 mAh
batteries of either voltage. The high-capacity batteries take much
longer.

You can also use the Vertex charging stand built for the Vertex commercial
radios with the FT-50 batteries. It's called the CA-15. You plug the
wall wart into the CA-15, then drop the battery pack (with or without
radio) into the charging stand. It has an internal 90 mA regulator,
so charging time is only 2/3 of what it is with the radio's charger,
10 hours for the standard batteries.

>3. Has anyone had a problem with frying a battery while operating the radio
>from external dc?

No. The 60 mA charge rate can be tolerated by any of the batteries
indefinitely. If I was going to do this for many hours, though, I'd
probably install the alkaline pack instead. Empty, the radio is much
lighter. Full of alkalines, it's still lighter than the NiCd packs,
and you have backup power.

>It seems to me that the current of the wall wart is excessive for a slow
>charger and that less time is really needed to obtain a full charge. Any
>ideas would be appreciated.

The wall wart probably provides this much current so you can charge the
battery with the radio turned on and receiving. If you decide to transmit,
power will be drawn from the battery, but that should be infrequent.

Dave

1481. Re: Mobile install - Jeep Wrangler

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-14 00:00:00 UTC
From: Roger Tomas <tomasr@agcs.com>
Message-ID: <3533D2C8.DBDBC0AF@agcs.com>
Source record: 147157

I just put a CB radio in my YJ. I found a pedestal mount that mounts to the hump right in front of the shift lever (I have a 5-speed). The mount is actually for a phone, but it's all metal, fairly sturdy and short enough to allow the radio to fit under the A/C unit. My radio is a larger model and does "wobble" a tiny bit but that's because the sheet metal in the hump is not that thick and flexes a little.

One option I considered was to pop out the vents in the A/C unit and insert a metal plate inside that the radio bracket could mount to (as opposed to the plastic housing itself). I decided against this because I thouhgt the radio was too heavy.

Another option was to mount the radio overhead to the underside of theroll bar (or speaker bar if you have one). I decided against this because I would have to take my eyes off the road too much and because of fear for dents in my head.

1482. Commercial amp

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-14 00:00:00 UTC
From: David Kao <david_kao@hp.com>
Message-ID: <3533E166.180B@hp.com>
Source record: 147158

I posted the following in the rec.radio.cb NG because there have been many discussions about amps there. But for some reson I don't seem to get any real knowledgeable person to respond. I think I posted it to the wrong group:

Last week I came across a dismantled HF transceiver. It is essentially a HF radio weighing about 30 lbs, bearing a FCC ID tag, 13"x5"x26" in size, made in the USA by a company called CAI Communication associates. The radio's front pannel indicates that it scans, memorizes, does USB/LSB/AM, and maybe more.

The box has no top cover and about 1/3 out of maybe a dozen PC boards are missing. So it is a piece of junk as far as I can tell. And that's why I got it for $20. But the good thing is that the power amp is still attached to the rear end of the box. Because of the size and the weight of the box I am wondering if the power output is proportional to the dimension. I think I got a commercial amp on my hand, the box got a FCC ID tag!

Anyway, I took it apart and looked at the power amp more closely. It's a 5 pills amp! There are apparently 4 TRW PT-9784's and a driver transistor of the size of a MRF-454. The amp seems not touched by any golden screwdrivers yet and all soldering looks still factory fresh. I did some quick check of all the transistors and I believe that the amp should be in good working order.

The amp is kind of interesting because it looks so different from a pirate CB amp that I once got a hold of shortly. The most significant difference is that it's got at least a hundred components on the amp. I addition, the filtering boards (2 of them) are still in the box, each of them, the same size of the amp, has perhaps a dozen reed relays for switching among different frequencies. The box doesn't have a power supply. It has a pair of power terminals to accept 12 volt supply from an external source.

Here are my questions. Does anyone know what are the rating numbers, such as max collector current, max collector voltage, etc. for the TRW PT-9784? What would be the possible power level of this amp? The PT-9784 appears to be the same package as MRF-455. The Motorola replacement data shows that MRF-454 is the direct substitude. Is it safe to assume that its ratings are about in between a 455 and a 454?

The amp appears to be a split then join kind of configuration so can I assume that it's about twice of a 2 pill MRF-455 amp in terms of power output?

They dismantled quite a few of them. Could be more on the way still.
I am going to watch the store closely. Is it really a trash or what?
Can anyone comment on this? Thanks a lot.

Regards,

David

1483. 2710 faceplate question.....

Newsgroup: rec.radio.amateur.equipment

security on a dual-bander is an important feature
for me... I'm looking into the ic2710... on this
model, does the detachable head "quick release",
i.e., pop off quickly like the kenwood 733/V7A's?
Or does it just detach but with the constraint of
a wire, like the Alinco 610, etc..?? If someone
could describe the mechanism for me, it'd be
greatly appreciated. Email reply would be best,
thanks in advance...

> kb2vx

I also have the 8000. Had it for about a year now and have had NO
problems with it whatsoever. Fits like a glove in the center console of
my VW Golf, and with a Larsen glass mount dual bander on the rear hatch
window have gotten excellent signal reports. Receive audio, as another
mentioned, was marginal with the internal speaker, but with the addition
of an external speaker to the left of my visor, it's almost hi-fi. Nice
large frequency displays, although the control function labels are a bit
small for convenient mobile operation. But I typically use only two or
three routinely anyway, so not a real problem.

Great rig, I'd recommend it.

Europe and the US are two different things... I am aware of the software
mod, but from what I've read on this newsgroup, it only works on some of the
radios (those with the non-US Eproms ?), other radios are damaged by this
approach, and have to be sent back to Yaesu for repair...

Cross band repeat works great on the TMV-7. I have used both Locked and full repeat. I have also used remote cross band repeat (turned on and off from a hand held - you need to down load the document that explains how to do that from the kenwood site).

I doubt I can explain it any better than the manual. Follow each step exactly.

I'm looking for the following rigs. Must be fully operational, at least 8 to 8.5 out of 10, and prefer original docs, though copies will do.

IC-275 A or H model

IC-475 A or H model

IC-575 (any)

Will also consider IC-211 or IC-271 if priced reasonably

Reply with detailed description of condition, accessories included (if any), and total price including shipping to 75010.

73,

Ron

Chris,

To open up OOB Xmit from about 135MHZ to 173MHZ, open the top cover and cut the green wire at W1. Be careful not to cut the wire at W2 as they could be confused.

But why not try to find the parts, rather than looking for a junk rig?
What's the driver IC? It might be a common part, or a common part could
replace it. Is there something special about the LED display? It too
might be a common part. If it's actually made up of a number of seven
segment LED readouts, the chance increases that you can find a replacement
or something that will work.

Why not try to figure out where the problem lies; in the readout, in the
driver or somewhee else? An LED readout, even a multiplexed one, is
fairly easy to check by taking a 9v battery and about a 1K resistor and
adding a couple of wires as test leads. Connect one wire to any terminal
on the LED readout, and then connect the other wire (which would have the
resistor in series with it) to the rest of the terminals. Eventually, you
will get a pair that lights one of the segments. If that doesn't happen
at all, then move the first lead to some other pin, and try again.
Working through the pins, you will be able to identify what each pin does,
and determine whether any segments are not working.

If you find a bad segment, then you know where the problem is. Since
you've traced out the readout, you then know the pinouts, so you should be
able to find a suitable replaement.

If all the segments work, then you know it's not the readout. You can
tell by what segments don't work where the problem might lie in the
driver. If the readout is completely blank, look first towards something
that is common. If all same segments on each digit (assuming it's a
multiplexed readout) don't work, then it's the common pin for that
segment. If it's all of one digit that doesn't work, then it's the common
pin for that digit.

Since you know, from decoding the readout, which pins from the driver go
with what function, you could observe those pins and see if the signal is
there. Non-multiplexed readouts might be easiest, since you could likely
see them with a voltmeter or even a single LED in series with a resistor.
Multiplexed readouts would be pulsing the lines to the readout, and would
probably require an oscilliscope.

1515. FS: TS-940Sat for $850

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-15 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <35350ADE.193F@amsat.org>
Source record: 147028

For Sale:

Kenwood TS-940Sat 160-10 meter SSB/CW/AM/FM transceiver $850
Nonsmoker, appearance condition 9 on scale 1-10
Phase noise mods added
Serial #: 5120073 (I'm the 2nd owner after 8 yrs)
Internal 120/240 VAC 50/60Hz power supply
Built-in antenna tuner
User and shop manuals + original box
Kenwood SM-220 scope $300
BS8 pan adapter (not sold separate from SM-220)
User manual
Kenwood 6 Khz AM filter $50
Kenwood 250 Hz CW filter $50
Kenwood IC-10 with IF-232 computer interface $100
User/Programmers manual
==========

Total: $ 1350

Package cost (everything listed above): $ 1200

If you purchase everything listed above as a "total" package, your total cost will only be: $1200. This includes shipping cost anywhere in 48 states.

However, if you purchase only the TS-940Sat by itself, or with just one or two of the above listed accessories, all the above listed cost apply, "no cost break" and "you" also pay the shipping cost, approximately $15-20, depending upon items purchased.

NOTE: None of the accessories will be sold separately until "AFTER" the transceiver is sold first. The person who purchases the TS-940Sat gets "first" choice on what configuration package items he/she wants. After the TS-940Sat is sold, then I will list the remainder of the accessories, if any, on the rec.radio.swap Newsgroup.

No trades, bartering or price negotiations.

Purchase process: Send your check or money order directly to my FCC callsign callbook or www.QRZ.com database US mailing address. Once received and your check clears my bank, I will ship UPS ground that day. I will include insurance for $1000.

If you want additional insurance, include
an additional $5 dollars.

If you want over night or air shipping 48 states,
include an additional $20.

If you want overseas shipping, add an additional
$60.

Source record: 147031

I have a Standard 2m HT that is 2.5 watts on high. It is less than
2 months old, and I just got a new HT this past weekend at a local Hamfest.
I would like to sale or trade this HT for another radio. I am currently
looking for a HTX-100 or Ranger RCI-2950 10m Allmode rigs. Actually any 10m
all mode rig that is in great shape both electrically and comsmetically will
be fine. If anyone is interested in this radio post a reply here or E-Mail me
at one of the bellow addresses. I'll sell it all for $175 shipped to you
(con. US only) or trade for a 10m rig of some kind. Please E-Mail me with
any details etc... or post what you have here. Thanks....

I would hope that whoever buys these radios takes you up on the
prgramming service if they can't do it themselves, since these radios
can't legally be used in the Family Radio Service (FRS). If you have
the capability to program these radios for someone - why not inlcude it
in the price?

Yes. These are workhorse radios. Not much on features but bulletproof
compared to any consumer ham HT from Japan.

>any licensed ham with a MARS/CAP endorsement upon receiving proof of the
>license and endorsements when they receive the radio at any of their service
>centers.

Yaesu will do this mod for ANYONE in europe for a fee, typically 100
pounds sterling. I have seen software which will and has opened up the
radio.

it works perfectly, why should you have to provide any sort of license
proof etc when you paid hard cash for this radio!
its now your property, which you can do whatever you like to. all you
gotta do is pay the people to mod the thing.

for those interested the radio has 1.8 to 30 mhz transceive and 6mt is
opened to 54 mhz.

thats my 2 cents worth. hope it helps any of you in need.

anyone help with a 6mt mod for the icom 729 ?

1528. Yaesu FT-920 and 300 Baud Packet

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-15 00:00:00 UTC
From: Richard van der Riet <richardr@worldonline.nl>
Message-ID: <6h3845$5u6$1@news.worldonline.nl>
Source record: 147041

Hello all and thanks for reading this msg.

I am trying to run 300 baud HF packet with my Yaesu FT-920.
The manual says that I should attach the modem (in my case a
AEA PK88) to the 5-ping data-jack on the rear...so far so good!
Than the manual continues saying I have to put the transceiver in
the DATA-LSB mode...still all goes well, I receive stations from all
around the world...ah well europe anyway ;-)

But when I try to connect there is NO AUDIO! First guess was that
I messed up soldering the wires....4 wires and 5 pins...ah well it's all-
ways possible, but that didn't do the trick....for some strange reason
I put the transceiver in the DATA-USB mode and voila...receive as well
as transmit audio!!! Great I hear you think...but alas...not that great, all
HF stations use LSB-mode and when I am in USB mode there is NO way
anyone even WANTS to copy my output....

Anyone here that has experienced this problem and has come up with
a cure????????????? Hope so, because this is really bugging me hihi

Thanks, 73 Richard PA3GWH

For Sale -- the following items comprise a complete Yaesu FT-900 ham
station:

FT-900AT radio -- this radio is in good (not mint) condition. It has
some cosmetic fading on the buttons.
Electrically and mechanically it is in perfect
shape. Comes with separation kit, all
manuals and documentation,
original boxes.
Modified for General Coverage XMIT.
Price: $725.00

FT-900 Service Manual -- Original from Yaesu
Price: $18.00

Yaesu MD-1 desk microphone. New condition
includes optional cord to connect
to the FT-900. Also includes
original box and manuals.
Price: $60.00

Yaesu FP-800 Power Supply/Speaker
New condition with all boxes and
manuals. This unit matches the
FT-900 and makes it a base
station. Price: $175.00

Yaesu YS-60 Watt/SWR Meter. No box.
Good condition. Matches
the FT-900. Price: $45.00

All prices above are plus shipping.

Would prefer to sell the whole station together.
Price for whole station: $975.00 shipping included

1533. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6h1uch$htp@news.Hawaii.Edu>
Source record: 147046
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

How many of you like myself, purchased a Kenwood TH-79A(D) and was
at one point hoping to be able to program it with your PC?? Some of the
Kenwood ads that I saw around the time I purchased the rig indicated PC
programmability and pointed to another companies' web site.

Well the company dropped the project and Kenwood has no plans to make
any software available either. And on top of that, when asked whether I
could get the DTMF sequences from Kenwood so I could produce the software
myself, I was told that the info in proprietary... So in effect us TH-79 owners
are SOL. Read their response below...

So, how did the other company get the rights to do the software in the first
place?? If anyone can supply me with the info I'd be happy to produce some
programming software for the public domain. I don't give a crap if Kenwood
approves or not, they're screwing the public!

Hi Gang,

I just picked up a TS-940SAT and I've found that the receive audio is distorted on strong signals. I can cure it by adding attenuation with the ATT knob but then I can't hear weak stations. This is really annoying as I have to constantly turn the ATT knob back and forth all the time. Anybody have any ideas? Thanks in advance and 73,

Al

Good idea George,
I used a dual band Larson mobile whip for several years on a 40'
houseboat with no problems. It was even hooked to a low power 440 repeater
for 2 summers. (Hey as long as I was in dock I had access to the phone
patch!)
Mike, that aluminum top would make a great ground plane on these
frequencies!

Steve

I'm no real expert, but I would say about $900 to $1200 or more,
obviously depending upon condition. I've been offered $900 for my
51S-1, but decided to hang onto it for now. But if someone offered me
$1200...

From: "Adnan S." <adnansx@msn.com>
Message-ID: <6h3ni0$7u6@bolivia.earthlink.net>
Source record: 147059

How to set up IC-2710H as a cross band repeater:

Set desired frequencies, and then while radio is ON, push both main tuning dials, and "SET L". That should do it. Repeat the same to cancel.

Adnan, Icom America service

Mike Pender wrote in message <6gnskfesa2@news.megsinet.net>...
Anybody have the keypresses needed to put the 2710h into
crossband mode. For the 2350, just hold the main and set
knobs. Doesn't work for the 2710. Hmmmm....
Thanks... Mike

1550. Kenwood TS850 problem too

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-15 00:00:00 UTC
From: galen barnaby <ny1t@worldnet.att.net>
Message-ID: <6h043a$4dk@bgtnsc03.worldnet.att.net>
Source record: 147082

My TS850 will intermittantly power up with:
a UL code,
or go into a scan, like the up (or down, not sure which way) button was
pushed,
or no audio,
or audio sounds like a filter is on and when the vfo is turned it
sounds like the filter is changed,
and the vfo increments at a different rate in one direction than it
does in the other.

I have done fine pitch surface mount, so I am not scared (much) to
replace parts.

please e-mail me also, I am going on vacation and may miss some replies.

Does anyone know where I might be able to locate the Mod for the Kenwood TM-V7A on the Internet? I would like to locate this so that I can reverse the mod that was done when I bought it to see if it gives me back some sensitivity outside the Ham bands. Again, any help would be appreciated. Thanks.

Jim

>
>

FACT #1:
CBers buy 1/2 of all HF rigs made !

FACT #2:
If the above were untrue, we (hams) would probably pay double the price for
said HF rig, as the mfg. would still need to re-coup it's engineering costs.
WOuld probably also reult in less models offered.

FACT #3: Increased resale value. Look at the venerable FT101 series. It is no
accident that these rigs still fetch >$500 if in mint condx with accys.

1565. Quesiton on Icom R-10 handheld receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-15 00:00:00 UTC
From: al3828@m9.sprynet.com
Message-ID: <35341ebe.12940267@news.spry.com>
Source record: 147097
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Hi,

I would like to purchase a handheld receiver and Icom's R-10 is
the one I am interested in. Does anyone have it? What is your
experience on using it? Does it have back-light support so you could
see the display at night, and how long does the battery last?

Please let me know where I could purchase it at lower price. So
far I find out that it costs $399.99 at Amateur Electronics Supply
(www.aesham.com) and $419.99 from Ham Radio Outlet
(www.hamradiostore.com). Both prices are after the $100.00 instant
rebate.

I Just wanted to thank eveyone who replied by email to this posting and
for the help obtaining a manual.

Thanks again,
Bob Sayers

Can anyone tell me where to get operation and or service manual for a
Hallicrafters SX-51, Ham Radio, it seems to be missing a tube, and also to
test this radio out, can I just hook any wire up to it as an antenna. I do
have a variable isolated AC supply to slowly bring the voltage up. Any
help much appreciated, Please email.

Thanks in advance,
Bob Sayers

They're both a brialliant scanner, and a bad scanner in one. Compared
to my Yupi 7100 and AR8000 there are a few cool things it does neither
of the others do and it's nice and small. However it's biggest
disadvantage is scanning speed, a 12 yr old Pro portable I have here
scans faster!

For a great review on this and other scanners, check out Rich Wells
site, www.qsl.net/n2mca

I believe the is an ICOM net on Sunday mornings on 14.317 at 10:00 EDST, this was supposedly followed hourly by a Kenwood and Yaesu net. I've heard the Icom net but not the others. Whether that is propagation or if they aren't anymore, I don't know. May be some one will read this and elucidate.

1575. IC207H question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-15 00:00:00 UTC
From: Alan Glashan <alan.glashan@dundee.ncr.com>
Message-ID: <01bd6854$a5983840$af014999@user>
Source record: 147107

I am considering the IC207H. I was told by dealers in the UK that the radio cannot be modified to act as a crossband repeater. However, I see on Icom America's web page this feature is advertised. Can anyone comment on this? Comments from owners in Europe in particular would be useful if they have done this mod and got it to work. ('changing' it to a USA version would probably be easy, but these days you generally lose the 1750Hz tone option from the European model).
Similar comments were received years ago on my IC32e, but with the correct button pushes, the unit does do xband repeat.

How does the radio perform againt pager break through and are there any problems surfacing with it?

thanks
Alan

>
> What about the Kenwood th-79e or the yaesu ft-50r

I have the FT-50 and am very pleased.

When I researched such radios I had PC programming of the radio in mind. By far this is the best way to program the FT-50.

I also considered the ICOM radios (which also have PC programming) but avoided them because of the high price for accessories (like batteries).

I am looking for a version of the MT1000 software that is a pirate version
that The tech at Motorola use:
I got another radio software from them that allows out of badsplit reception
and Transmission, and
allows actual full VHF Transmision. I need this bad, and if anyone knows how
to dump and or reset
the CPU in one that would be helpful also. I tried to program one and the
radio locked up while
loading to the prom, I can still use my other MT1000, read/write, so it is
no the rib. anyways
it is locked up and says 88 on the lcd. ANY IDEAS?

Thanks

M. Storm

have you got a board no. to go on ?

it seems silly for any manufacturer to produce several variants of the
same model. it would be hard to recoup the costs involved.

post any more data you have. I`ll try asking a few relevent people and
place my findings here.

```
------------------------------------------------------------
FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!
------------------------------------------------------------

MUST SELL (or trade) - MAKE AN OFFER

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I'm WAS asking $2150. for scope and mount (and absolutely will
NOT sell them separately) but MAKE ME AN OFFER!

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,
```

I own a 756. Its an "ok" radio and not worth more then the $1900
I paid for it. My best guess is Icom goofed! They sold the 756
for the correct right price, $1900, trying to capture that market place.
However when Yaseu came out with the 847, they need to position
the 746 into that market, thus the 756 needed to be bumped up in
price. My best guess is Icom will discontinue the 756 once inventory
runs out because most hams, again I say most, will know better and not
pay more for the 756 then its worth. It appears to me the Icom
marketing personnel gambled and goofed a BIG one, and now they
are trying to cover up on there blunder!

Paul:

I've found several different programs that can read and write to the
706 MK II memories. Unfortunately, I have not found any that do the
alphanumeric labels, repeater splits, PLs, and filter setting - i.e
all the things that are rather slow to program via the radio. It almost
defeats the purpose of having this feature. Based on the manual, it is
not clear whether or not this is a limitation of the command set.

If you can settle for less features, check out the following URL:

http://www.halcyon.com/amreg/

In any event, if you find something with the above features, I'd like to
know about it.

Thanks,

Don

I have for sale a Kenwood TH-235 two meter handheld radio. This is the high-power version, and comes with the 5 Watt battery, desk charger, beltclip, antenna, all documentation and original boxes. This unit is in completely mint condition and still has a few months warranty left. The handheld has excellent transmit and receive audio and has a total of 60 memories. I am selling it because I recently purchased a dual-bander and do not need this radio now. Most places advertise this new rig for $200.00 , but I will sell for $170.00 shipped, lower 48. Please reply via my email.
Thanks and 73,

Message-ID: <6h60q0$f4a$1@newssvr04-int.news.prodigy.com>
Source record: 146937

My speculation is that since the FT900 was a popular and good performing rig that it will probably be updated to include at least six meters and dsp. A rig is not considered competitive without dsp anymore. The detachable faceplate in combination with a rig that has an internal antenna tuned that can be put in the trunk is very desirable to a lot of hams. I can not see the FT847 being it's replacement. Just my GUESS and hope. --- Steve N9ROU

Dave - QST is the best source for this info. Many (but not all) hams tend to be very subjective and can not often give a good evaluation, though operator impressions are appreciated and can be helpful. All current radios have great sensitivity - it is the dynamic range, selectivity, and synthesizer noise performance that separates good receivers from great receivers. QST does very thorough reviews and has reviewed the TS570D. I believe they gave the TS570 a fairly favorable review. It mostly lacks in blocking performance compared to the more expensive rigs. --- Steve N9ROU

David Whitehurst wrote in message <6h55rngpl1@grouper.exis.net>...

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

1632. TS-570D Keyer Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC
From: Jay A <jltmn@ibm.net>
Message-ID: <3536d441.0@news1.ibm.net>
Source record: 146958

I seem to be having a problem with the keyer in my Kenwood TS-570D and I wonder if anyone else has experienced this.....

Every once in awhile, a dash will come out instead of a dot when I key a dot. This happens rarely, maybe once or twice during a QSO, but when it does it is kind've frustrating. I am confident that the problem is not with my keying, nor with the paddle I am using and as a mater of fact when I once heard what I thought was the same problem coming from another ham during a QSO, I asked him what rig he was using and whether he had been experiencing such a problem. Not only was he indeed using the same rig, but he told me he had ordered a bug to use as he had given up on the internal keyer because of this problem.

I wonder if anyone else has experienced this, or can share some comments or info.

Source record: 146959

Carlos, I just checked my 730 manual. The procedure is described on the inside of the back cover. But, in a few words, the CPU is automatically reset every time that you turn the power off and then back on. They recommend that you turn off the set, disconnect the power connector for at least 45 seconds, reconnect it and then turn on the set. That is all there is to it. I have had my 730 since 1982 and have never had the CPU screw up.

Good luck.

1634. ICOM IC-746 verdict?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC
From: Erik Skovgaard <Erik_Skovgaard@bc.sympatico.ca>
Message-ID: <6h6k04$ra2$1@news.bctel.net>
Source record: 146960

Has anyone done a summary of the reviews of the IC-746?

I am looking for observations, not a recital of the spec sheet; e.g.

- how well does the noise blanker work?
- how good is the DSP noise reduction?
- what is the synthesizer noise floor?

Why do they have narrow filters for both the 9 MHz or 455 kHz IF?
(and which is better?)

Other comments?

I am mainly interested in the radio's HF performance, for instance, in comparison with the Yaesu FT-920. They are both in the same price category, but I am not impressed with the FT-920 SSB selectivity (2.4 kHz) which is fine for ragchewing, but lousy for any serious DX. The Icom specs look better.

73 de VE7MDL ....Erik.

1635. Help needed with Saiko scanner

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC

Picked up a Saiko SC 292 mobile scanner at a hamfest a few weeks ago, but I'm having a few problems. It's a very interesting scanner(covers 26-30, 68-88, 118-178 & 380-512MHz), and I would like to get it running again. First, I can't find any info on this thing anywhere. Second, the LCD display is dead, and when I tried to fix it I may have made it worse. So, I am looking for schematics, a users manual, and/or contact info for the manufacterer(Saiko... Anyone ever hear anything about them?). Any comments or suggestions on this radio or general radio/LCD display repairs would be appreciated. If I can't get the display/keypad to work, I'm thinking maybe I can setup a remote head for this thing. It only uses maybe 10 or so wires to conncet the radio to the display part. Is that worth trying, or should I just scrap the thing for parts?
TIA & 73's

1636. Re: TS-87Owners...there is a Mod to increase power

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC
From: Worthlin <NoMail@NoMail.com>
Message-ID: <6h6prc$gm0@argentina.earthlink.net>
Source record: 146962

The increase of power from 100 to 130 watts would not be noticeable at the other end. Why put extra stress on the components of this expensive transceiver for no appreciable gain? I run my TS870 at 50 watts to avoid neighborhood TVI / RFI. I seldom have to turn it up to complete QSO's. I suspect this would also be true at 25 watts or less, especially with improving band conditions. It probably saves lawyer's fees too.

1648. TM-261A dim display

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC
From: "Martin B. Walker" <mbwalker@freeway.net>
Message-ID: <01bd68da$4ccffbe0$554f99ce@p5-60>
Source record: 146981

Does anyone know of a way to change the brightness of the LCD display on a Kenwood TM-261A? It seems rather dim compared to my Kenwood TM-241A which has 4 settings to choose from. I have not been able to find anything in the manual and thought there might be an undocumented procedure that someone has discovered.

Thanks
Martin KC8CFP

1650. Mot. Radius slow audio problem?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC
From: frog207lillypads@juno.com
Message-ID: <6h3sneods1@news.ncal.verio.com>
Source record: 146983

I have several Motorola Radius M 216 radios on UHF. A common probem several have had is a slowness of the receiver to provide audio when the radio is first turned on. In some units it take nearly a full minute after the radio is turned on before audio comes out.

Anyone else seen this problem? Anyone have the fix, short of sending them off to Motorola? Thanks.

Ed W7DXZ

Well I wonder if our American friends think we are dumb. Well I was surprised that when I decided to send out a followup usenet message, I was asked if I want to send it to all 9, yes all 9 usenet groups that the original message was sent to..

You'd think that these people would work out that USENET has groups to place relative information and you don't have to SPAM 18,000 groups to get a message across.

If I wanted a flaming RADIO FROM THE US, I would check out the REC radio newsgroups. YANKS, don't treat the world like idiots because we can search usenet ourselves and we do appreciate that you just don't want us to miss such an incredible offer !

Hello all -

I have an FT-8500 that suddenly seems to have lost sensitivity,
particularly on the 2M band. Stations that used to be readable are no
longer so. I can hear these same stations fine with my FT-470 using
the same antenna. The receiver is not completely gone as it works fine
with stronger stations but stations that give approx. 3-5 s units on
the FT-470 don't even show up on the FT-8500.

I would appreciate any suggestions that may be offered.

Thanks
Straw

Thinking about QRP?

Thought about it in the past and aren't sure it's for you?

There will be a number of QRP-related events coincident with the
Dayton Hamvention:

Thursday, May 14 all-day QRP ARCI Technical symposium
QRP hospitality suite
Friday, May 15 QRP Forum at the Hamvention
QRP ARCI Banquet
Saturday, May 16 Vendor social / NorCal building contest

For information, check the following web site:

http://www.qrparci.org

or feel free to ask for more information.

Source record: 147011

In article <6h3845$5u6$1@news.worldonline.nl> you wrote:
: But when I try to connect there is NO AUDIO! First guess was that
: I messed up soldering the wires....4 wires and 5 pins...ah well it's all-
: ways possible, but that didn't do the trick....for some strange reason
: I put the transceiver in the DATA-USB mode and voila...receive as well
: as transmit audio!!! Great I hear you think...but alas...not that great, all
: HF stations use LSB-mode and when I am in USB mode there is NO way
: anyone even WANTS to copy my output....

You have encountered a common problem. The manual is incorrect. DATA-USB is
AFSK (Packet) and DATA-LSB is FSK. You set the sideband for packet in
menu #46.

For more information see my web page:

1679. Recommendations on good HF Tranceiver?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-16 00:00:00 UTC
From: Dana Roode <K6NR@Juno.com>
Message-ID: <3536295C.16BA@Juno.com>
Source record: 147012

I've used a Kenwood TS440S for the last 10 years and I am thinking about buying a "new" radio. I'm looking for something under $2500; I work DX, dabble in contests, and am hopeful that current radios do better with the wide variety of man made and natural QRN around my QTH. What's a good radio? I've started to check out the IC756, FT920, TS570, TS870. Any recommendations or warnings on these or other radios?

I'd appreciate replies via e-mail to K6NR@JUNO.COM, but will check back on the newsgroup as well.

Dana Roode, K6NR

Hi George,
Look again, the new Kenwood only display's one band at a time, and
receives one band at a time. I think!

From: Keith Casey <kd7afd@doitnow.com>
Message-ID: <6h99uu$7iq$1@usenet56.supernews.com>
Source record: 146775

Your doing almost everything right. The TM-V7A features both one way cross band and two way cross band. One way is handy when your dual band hand held can hear the repeater, but not reach it. Anyway, you should press the Control button (small unlabeled button between the volume controls) before going into cross band. CTRL will be displayed on the band that wasn't selected. This will enable two way cross band operation.
By the way, one way will go either way, just select the band you want to transmit on.

I am the owner of two TMV7A radios, I bought my first one when I saw how beautiful the Blue face looked in a friends ham shack. I brought the first one home,and put it in my shack, and Dang did it look good, and do neat things.

I was so impressed that I bought anouther one, and put it in my car, I am so impressed with the capabilities of the radio that it is a shame to have to say that it is a piece of dung. It is without a doubt the most terrible radio for mobil use I have ever seen, this by the way is a bad thing for a "MOBIL RADIO, (and I have had a few), this thing is a tottal danger on the road, It is simply unusable in a car. I would gladly take a refund on both, or trade outright for any other radio with the same features and a safe screen. I have tried shielding the screen, just about every other thing I can think of, and I still have to pull off onto the shoulder of the freeway, and with my best effort try to guess which buttons to push to change the display enough to find out what frequency I am on, and all this while at a dead stop shielding it as best I can. I have never written a about any thing like this before but this is so terrible I felt I just had to warn others.

1694. 2 meter HT for sale: Kenwood TH22AT

Dean I know what you mean we keep hearing about Bad Apples here that the good guys fall by the wayside. Recently Bill Marx, W2CQ offerd an SX-25 for sale, I Sent him my money order and in no time it arrived very well packed via UPS and everything he said it was and more. Radio arrived in great shape and works like a champ.

This was particularly gratifying to me as it was a replacement radio for my very first receiver when I was a novice back in the '60's. When it arrived it was like stepping backwards in time, to those long winter nights trying to work DX with a home brew rock bound transmitter on 40 meters depending on the SX-25's crystal phasing filtering to null out the heterodyne's from the broadcast stations, and suddenly hearing a lone Austrailian station peeking through the interference, Pretty heady stuff for a 16 year old novice! Even more so when he acctualy responded to my barely 5 wpm sending. So you can imagine how pleased I was when the radio from Bill arrived in such fine shape.

IT is nice to hear from folks who have had GOOD expierences dealing with people here.

Hi all
I have a for sale FLUKE 6060A/AN Synthesized Signal Generator.
Original New in Box (unused) 2 PCS
If this is something you can use, make me an offer.
Frequency Range ..... 0.01 MHz to 520.0 MHz in two band:0.01 MHz to
244.99999MHz 245 MHz to 520.00000 MHz
Resolution : 10 Hz
Amplitude (3-1/2 dight display)
Range (Indicated) ..... +13 (+13 peak on AM)to -127 dBm;
Resolution..... 0.1 dB (<1% or 1 nV in volts)
Accurcy.....+ - 2.5dB.
Amplitude Moudulation (two -digit display)
Depth Range.....0% to 99%
Resolution.....1%
Accuracy.....+ - 6% of setting for internal rates; RF peak amplitude
of +13 dBm or Less
Power..... 115V, 230V ac + 1 10% 47Hz to 400Hz, <100watts.
Tel :714-778-5151
Thanks

1707. Yaesu FT-8500 MARS/CAP Mod problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-17 00:00:00 UTC
From: Miguel Puchol <mpuchol@eurohubner.com>
Message-ID: <35377B86.F6E4A76@eurohubner.com>
Source record: 146826

Hi,

I have an FT-8500, and want to do the MARS/CAP mod on it. I have cut the green cable behind the control board, and done the reset while pressing various buttons. I can now have wide RX, but no TX below 420 MHz, and I need to TX around 400 MHz. Is there any additional mods to be done so that I can do this ?
Maybe there is a mod with the ADMS-2D software, like there is for the FT-50 or the VX-1 handhelds...

Cheers !

Mike

We have an engineering job opening in our development group here in Dallas, Texas.

We are part of the TIRIS organization, a division within Texas Instruments which develops and markets RF identification systems.

Our particular group develops product for the ARC segment (Automatic Recognition of Consumers). One important target for our products is the oil industry. You might have seen the Mobil Speedpass application, where one gets automatically recognized by the gas dispenser when fueling one's car.

The little electronic RF devices that Mobil issues are developed by us, we call them "transponders". They can either be on your keyring or be mounted in your car.

The devices work through an RF link, and also contain the necessary smartness by means of embedded software.

The associated reader equipment that goes into the gas dispenser is also developed in our group.

The person we are looking for has experience in receiving and transmitting techniques, modulation techniques, antenna theory, and some experience with digital electronics and embedded software.

I believe excellent engineering talent to be present within the world of radio hams. Therefore, if there is anybody that feels he or she fits the above profile, and holds an electrical engineering degree, please send us your resume.

Please send it to:

L.J. d'Hont Mgr development engineering TIRIS ARC segment

> KB1CGA

Tom, take a look at http://gorzarg5.phy.bnl.gov/~scott/radio-clocks.html;
there's a couple of pointers to home brew WWV/WWVB receiver articles, w/ a
couple of references to early '70s vintage digital clock projects. Be
aware that some of the parts in those clocks are now unobtainium, so you
may have to kludge in more modern parts.

Could not agree more, I myself work 5 Watts all the time, that's QRO
with me. 1 Watt is more likely to be radiated here. On the other hand
this might just be the reason why I have not worked all those people
posting their messages here. ;-)

Anyhow the message is:
Concentrate on quality, not quantity. Many stns put out a bad signal in
their effort to squeez out the last mW. If they would try to make a
decent transmission they would probably be more succesfull.

>an active channel for about 10 seconds, and then it's off
>on it's way again. Is there a way I can change this to a
>carrier operated scan like my other radios?
>

Sure can Chris...
Check section 4-9 of the manual (mine is on page 25) the section titled
"Selecting Scan Resume Type"
it says....
Start Scanning... press [FUNC]+[0 SET/SB} to switch between the scan resume
types
you are probably looking for Busy resume, where scanning resumes 2 seconds
after the transmission stops

Hope this helps

[Please forgive me if this appear several times... news server errors!]

Gordon West Radio School Presents:
T W O Special Classes!

No-Code Technician Amateur Radio
Licensing Class For Mariners
Friday June 5th, Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

And

General 13-wpm Morse Code
And Theory Review Class
Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

No-Code Technician Class for Mariners -- Class Instructor: Gordon West,
==================================== WB6NOA
This special class is designed specifically with mariners in mind. Learn how Ham Radio can make your next cruise even more fun! Stay in touch with fellow hams as you sail down to Baja, use ham radio phone patches to keep family and friends advised of your position. This fun and entertaining two-and-a-half day class starts on Friday afternoon and covers everything you need to get your Federal Communications Commission No-Code Technician license. Take the two multiple-choice exams right there in class and get your callsign two or three days later! Students who pre-register will receive the Gordon West "No-Code Technician Plus" textbook, theory cassettes, and a special pre-study package. The class fee includes nineteen hours of tuition, beverages, lunch on both days, a barbecue on Saturday night, and a special Saturday night after-class workshop detailing marine installation and use of ham radio onboard yachts and powerboats.

General 13-wpm Morse Code
and Theory Review Class -- Class Instructor: Julian Frost, N3JF
========================
This class is for mariners that want to upgrade to the General Class license, but like many people, find the 13wpm Morse Code requirement their biggest stumbling block! Make 1998 your year to upgrade. Don't let the Code hold you back any longer, the Worldwide HF bands are waiting for you. In fun, stress-free way, your instructor will take you from a shaky 5-7-wpm all the way up to 13-wpm, or higher, in preparation for your exam on Sunday afternoon! Techniques in passing the CW exam will be taught, and there will be multiple demonstrations showing just how easy it is for YOU to pass the 13-wpm, or even the 20-wpm code exam! Theory review sessions

are held throughout the two days to help make passing the written exam even easier. Students that pre-register will receive the Gordon West "General Class" textbook, Gordo's exclusive CW tapes, and a special pre-study package. The class fee includes sixteen hours of tuition, beverages and lunch on both days and a barbecue on Saturday evening. General Class students join Gordo and his No-Code Technician class for an operating session and workshop dedicated to installing, using and maintaining ham radio equipment aboard yachts and powerboats.

--==--

For full details on either of the classes described above, please call Gordon West at (714) 549-5000 between 10am and 4pm, Monday through Friday.

1744. TS-930 & Linear Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-17 00:00:00 UTC
From: rmolloy@snip.net
Message-ID: <3536a370.0@news.snip.net>
Source record: 146869

I have just acquired a low serial number TS-930S. The wiring diagram for the remote (linear) connector looks to be the same as the TS-850. But when I connect it to my AL-82, the XMT light comes on but there's no signal. Also, I expected to hear some relay noise and didn't. Anyone have any idea what's going on?

Thanks,
Bob -- KD2UJ

Our company has over 1,000 Radius and Maxtrac mobiles. I can't say
they all do it, but I've seen a few of our Radius models act this way.
The audio usually clears up within 10 seconds or so on the units I saw
act up. Not sure if it's a problem or just the way the radios always
worked. Never had complaints from the users in the field...just
something I saw on the bench.

Pieter, I suggest you build an off-line supply. You can get circuits to do that from many places, notably from those who make the transistors and those who make the drive circuits. Not too complex, either.

1766. Icom IC-2000H

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-17 00:00:00 UTC
From: "VE6RJZ - R. Zaleschuk" <**randyz@telusplanet.com>
Message-ID: <01bd69d6$28c726e0$ab5522cf@randyz>
Source record: 146891
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

I have seen alot of Internet chatter about the Icom IC-2000H not living up to Icom's advertising with respect to intermod. Icon claims this unit to be the "Intermod Fighter!". If the IC-2000H is such a failure and hams are disappointed with the unit, why don't we see more of these units for sale in the newsgroups? Are the people that are buying the units genuinely disappointed? If so, are they throwing their rigs in the garbage and not reselling them? Perhaps all the bad "Internet Press" is only personal opinion from sadistic amateur operators who like to torture themselves buy buying the wrong radio and then feel sorry for themselves in a public kind of way, or, perhaps the units are not that bad after all and the people posting these messages just like to watch themselves type.

I read all of the performance reports for this rig posted by many Hams on the Internet and have read all of Icom's advertising, I imagine this radio to be in the class of the Kenwood TM-261A or the Alinco DR-140T but, without a test rig, I can't form an opinion to post to fellow hams. I did swap a scanner (cell capable, no less) for a IC-2000H that wasn't working (Hmmmm, don't know what happened, just quit workin one day, duh...) and thought I might repair the thing and try it out for myself. Unfortunately, the guy didn't tell me that the unit had been struck by lightning and that all the components 'crumbled to the touch'.

I've tested the Kenwood TM-261A and think that the scan-speed it "too slow", the display is "too glossy" (tough 'read' on a bright day... sunny day?... forget it!). I haven't been able to FIND let alone touch an Alinco DR-140T to form an opinion on this rig yet, but, based on my success with my Icom IC-229H, I will probably buy the IC-2000H as my next rig. So, all you disappointed IC-2000H owners, sell me your unit cheap if you are embarrassed to admit you own one. I will even give you a few bucks for your 2000 if it is not working (this should get those opinionated people typing.... eh?).

Greetings Banff, the heart of the Rocky Mountains!

Looking for a good clean 211, with acessories, manual with a serial number above 2800, prefer working with updates already completed, if not I am still interested. Serial number is the most important thing!

Please email with any that may be out there.

Thank you for stopping by.

I'm looking for a super clean 575H from a non-smoking enviornment,
preferably with original docs. In the interests of making a quick deal,
please include the following info in your reply:

Condition (1-10)
Any cosmetic or electrical problems
Age of radio
Whether you are original owner
Any accessories included (mics, filters, etc.)
Total price INCLUDING COD shipping to zipcode 75010

Include a phone number if possible.

Thanks,

From: "Jeffrey L. Bauman" <wb5kzw@hotmail.com>
Message-ID: <6h7lm0$d9s@bgtnsc03.worldnet.att.net>
Source record: 146900

Has anyone used the HQ-170 on six meters in earnest?

How does performance (sensitivity, drift) compare with, say,
using the 170 with an outboard receiving converter (like Ameco)?

Thanks,
Jeff

Thinking about dealing with Paul Kluwe? Do it! I just bought a super-nice Drake R-4C receiver from Paul. The price was right; the receiver is every bit as nice as he claimed, if not better; he packed it VERY well; and he shipped it VERY quickly. All we seem to hear these days is "So-and-so is a bad trader". Here's a good one for a change!

Immediately available in Atlantic City, NJ area - 40 Ft Heavy Duty Amateur Radio Tower in excellent condition.

The tower has been lowered and is on the ground.

Able to support large antenna arrays (Had a TET HB35 5 element tribander, pair of 14 element two meter Cushcraft FM boomers and an FO 22 ATV antenna on top when erected).

Asking $250 - You remove from the site.

Will also consider a package with the TET HB35 and a Hygain Tailtwister Rotor.

I was in HRO a few weeks ago. I got to play with an Icom-746 and a Kenwood TS-570D that were sitting next to each other. After about 2 hours of playing with both rigs, I was convinced that the Icom had a much better receive. I bought the Icom. For a few hundred bucks more I got a rig that would not only receive HF like the 570D, but I have 6 & 2 meters also. When conditions are bad I can lisen to NOAA Wx, the Aircraft band, and any freqs. up to 174 Mhz.

HI Ken, I recently bought my FT-50R at a hamfest and like to never figured out the operation from the manual. I was shocked at the performance of the radio, incredible! I'm just writing to caution you about being tempted to take your radio apart and make it "better". Yours and mine apparently don't respond to the modifications that were described. I don't see much advantage (for my own personal use) to changing it anyway.
(Now if I could transmit on aircraft freq 122.7 UNICOM that would be a different story)
Take care and hope you enjoy yours too!

>It is a dual band handheld (2 m and 70 cm), released about 4 years ago.

And it's a total piece of SH*T!!! I purchased one from JRS Distributors at a
hamfest in 1994. (The year they came out) I believe it was June 18th.
When I got home and connected Icom's cigarette lighter cable to the DC Jack
nothing happened. The DC jack was no good! I sent the unit back to JRS on
June 20th, after a lot of arm twisting with JRS, they exchanged it for another
one which I received 2 WEEKS later. After powering the unit up, VHF RX died
within 5 minutes. I sent that one back the next day, and they insisted that
Icom had to look at it. Icom exchanged it and sent it back to me, by this time
it was mid August, a full 2 MONTHS after I purchased it (for $500 with speaker mic)
when I finally got it back. And by May of 1995 there was intermittant noise on
440 TX and then I chose to unload it. 3 Radios, 3 pieces of junk.

I have never had any trouble with any other HT I've owned. (HTX-202, HTX-404,
IC-W21AT, IC-P4AT, IC-Z1A, TH-41AT, TH-79AD) With the exception of a little
problem with the Icom Z1A which was resolved within a week and a half.

My advice, STAY AWAY... If you do purchase one, pay no more than
$150 for the base unit (HT, Battery, Charger, and Manual).

The V7a is being replaced with the new TM-G707 , it's the same radio but had a different display. Radio should be out by the end of the month. Price will be 449.95, Only problem is , it only displays one band at a time. Other than that its a nice rig. I have the flyer from H.R.O for it.

Steve -- W1SWR

Message-ID: <35394440.661A0BCE@erols.com>
Source record: 146672

New Kenwood coming out by the end of the month. VHF - UHF
and replaces the V7A. Has a different display and only shows one band at
a time. Real nice looking rig. Color of display is yellow or orange
and looks exactly like the V7A and sells for 449.95 so beware
sellers of the V7A, your radio just dropped in price or soon will
be sold out on special discount so that dealers can get rid of stock.

Just got a flyer from H.R.O and the price is as i say, 449.95

I could hardly agree more. I quit trying to enjoy ham radio in 1987.
Between 1973, when I became a ham, and 1987, when I packed away my
equipment. I think I had maybe 5 interesting conversations on ham radio.
The absolute, unvarying banality of ham conversation on both the low bands
and two meters never ceased to amaze me. These were presumably intelligent
people! They couldn't successfully pursue such an advanced technological
hobby if they werent! Yet they were as incapable of speaking intelligently
with each other on topics other than their health or their rigs, or of
exercising even the minimum imagination necessary to make human contact
with foreigners, as if they were children--or CBers. It took me years to
understand that this limitation was really an integral part of the ham
experience (I'm a slow learner.) Once I did understand this, I switched to
computers and then the internet, where usenet makes possible occasional
thoughtful and interesting exchanges (in between the cancerously-spreading

sex ads).

I'm refurbishing my old homebrew 6146 transmitter (built in 1966 from the 1966 Handbook), and I used to use a VF-1 with it that I sold a long time ago, like an idiot. I don't want to fix it too, though. If you have a working VF-1 you'd be willing to part with, please e-mail me, and know that it will have a good home as I relive my youth.

By the way, I've just discovered that aluminum electrolytics rated at 450V are expensive! I remember when they were, oh, never mind...

I complained twice to Kenwood about mine. Their first answer was that you can adjust the brightness and contrast controls sufficently to make the display visible in high ambient light--I told them that this was in fact not true and that it was a safety hazzard. The second answer I got was that you must not look at the display at an angle...Duhhh! They know they've got a dog display...they won't admit it 'cause too many of us would want them to fix it...they're building a "single receive" radio to be more "affordable" that, gee whiz, has a black on amber display. I have never been so disappointed in Kenwood before---for all you other disappointed ownders e-mail to "rggarcia@ix.netcom.com" which is Kenwood Customer Care (or lack thereof...) and tell them what you think.

Source record: 146721

First program the channel with the receive frequency as normal.

Then put the transmit into one of the VFOs. Then put that in the same
channel as you would normally (hold the func key for a couple of seconds and
then hit it again with the channel number blinking) but this time hold PTT.
It will put that freq in the same channel as the TX freq.

February 20, 1998
Dear President Stafford,
You have not responded to my letter of September 27, 1997 where I questioned why I was removed a VE. I have not violated any provisions of 97.525 or any other aspect of F.C.C. regulations that govern this hobby. Thus unless you restore my VE status FORTHWITH I shall send the following letter to newspaper editors throughout the country (on a staggered basis). This is a threat. I believe fully in what follows. The only reason I have not written this letter before was I was not motivated to actually send it.

Dear Editor,
There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these
large antennas.
The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).

2 ele 3 band HF quad antenna. Hy-Gain, all aluminum, everything
including
the boom-to-mast clamp. I tossed out the crappy gamma maching network
and
opted for a remote relay DC switched feed. I see some novice or tech
having
a real good time with this 'cause it'll probably need some fiddlin' and
diddlin'. 26' tip to tip - not for the faint of heart and probably not
for
field day but who knows. Fun to play with. All copperweld element
wires. A real go-getter. Take it home (I can't possibly ship this
without
a major hassle) for $50. I live in southeastern NH, near Exeter NH.

1851. TM-V7A-Can it do it?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-18 00:00:00 UTC
From: reportman@yahoo.com
Message-ID: <6hb73unuj1@nnrp1.dejanews.com>
Source record: 146756

I know that this question has been posted many, many times, but I have never seen an answer. Is there any mod out there that allows the TM-V7A to receive above 470? I'm looking for a radio that will RECEIVE into the 480's. It looks like the choice right now is the FT-8100, but I really like the features of the TM-V7A, and would like to go with this radio if I can get it to receive up there.

Thanks in advance for all replies.

Source record: 146758

One more thing - If you plan to repair it yourself (provided it fails!) and you are not experienced in repairing switching supplies, I think that you should try to find a linear supply that will meet your needs.

The typical switching supply has a significantly higher component count that a comparable linear unit and the linear supply should be much easier to troubleshoot. I just repaired an Astron VS-35M that had been damaged by a (lightning?) surge. I would not have even attempted to repair a switching supply with similar problems.
The Icom 251A and 551A have switching supplies and I nearly went nuts several years ago trying to fix one of those supplies that had been damaged by lightning. Solution? Sent it to Icom. About a dozen replaced components and $85.00 later it was working again.

There are advantages to having a switching supply - size, weight, first cost (in some cases), but I just think the linear supplies are more straightforward and, thus, easier to understand, etc. Besides, those switching supplies have almost no scrap value at all. :-)

Regards,

Bill

Pieter,

Call Fair Radio Sales in Lima Ohio, they had a rack mount power supply
(48 - 50 VDC) originally built for a commercial HF amplifier that should
fit the bill nicely. I was looking at this supply for the same type of
solid state amplifier project that you are building.

Must sell all at fair prices: need to 'clean house' and cut $ value of
ham radio
FT-990AC hf xcvr, has optional 1.8 ssb filter. This xcvr is
approx 18 months old. Is latest version 1.4 and in excellent condx with
box, op manual & serv manual. These 990's are complete with AC power,
auto-tuner, elect. keyer, etc etc. Check the catalogs for the long
list of standard features. $1200 shipped
FT-650 is a 50-28-24. mhz all mode 100w output with optional
internal AC power, sub-audible tone board, 500 hz cw filter. Is 990
sister and has extremely 'hot' rcvr on all bands. Internal low noise
pre-amp too! original $1600 price, $1000. box & manual.
FT-726R HF & VHF & UHF 10w output all mode. Has optional HF module
(28-24.5 & 21 mhz) plus the satellite duplex module for FM or multi-mode
'birds'. Condx is 9 with couple cosmetic flaws but operationally all
ok. $1000 or $750 with-out the HF module. (have offer on hf module).
manual.
Condx of all is very fb. Al Rochester, NY

1863. FS/MFJ 948 ant tuner

Newsgroup: rec.radio.amateur.equipment

Source record: 146782

.Mfj deluxe versa tuner 2 model 948 nice shape with book $75.00

The Mfj-948 is dessigned to match any transmitter to almost any antenna,including dipoles,inverted vees,verticals,mobile whips,beams,random wires,and others fed by coax lines,balanced line or a single wire. An anenna-selector switch provides versatile antenna selection. The Mfj will handle upto 300 watts of rf power from the transmitter from 160-10 meters. The mfj-948 employs a peak reading cross needle meter so forward power,reflected power,and swr may be read simultaneously..

VE6RJZ - R. Zaleschuk <**randyz@telusplanet.com> wrote in article <01bd69d6$28c726e0$ab5522cf@randyz>...
I have seen alot of Internet chatter about the Icom IC-2000H not living up to Icom's advertising with respect to intermod. Icon claims this unit to be the "Intermod Fighter!". If the IC-2000H is such a failure and hams are disappointed with the unit, why don't we see more of these units for sale in the newsgroups? Are the people that are buying the units genuinely disappointed? If so, are they throwing their rigs in the garbage and not reselling them? Perhaps all the bad "Internet Press" is only personal opinion from sadistic amateur operators who like to torture themselves buy buying the wrong radio and then feel sorry for themselves in a public kind of way, or, perhaps the units are not that bad after all and the people posting these messages just like to watch themselves type.

I read all of the performance reports for this rig posted by many Hams on the Internet and have read all of Icom's advertising, I imagine this radio to be in the class of the Kenwood TM-261A or the Alinco DR-140T but, without a test rig, I can't form an opinion to post to fellow hams. I did swap a scanner (cell capable, no less) for a IC-2000H that wasn't working (Hmmmm, don't know what happened, just quit workin one day, duh...) and thought I might repair the thing and try it out for myself. Unfortunately, the guy didn't tell me that the unit had been struck by lightning and that all the components 'crumbled to the touch'.

I've tested the Kenwood TM-261A and think that the scan-speed it "too slow", the display is "too glossy" (tough 'read' on a bright day... sunny day?... forget it!). I haven't been able to FIND let alone touch an Alinco DR-140T to form an opinion on this rig yet, but, based on my success with my Icom IC-229H, I will probably buy the IC-2000H as my next rig. So, all you disappointed IC-2000H owners, sell me your unit cheap if you are embarrassed to admit you own one. I will even give you a few bucks for your 2000 if it is not working (this should get those opinionated people typing.... eh?).

Greetings Banff, the heart of the Rocky Mountains!

1874. Icom UT-106 DSP Module First Impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-18 00:00:00 UTC
From: Jeffrey Knox <jwknox@ix.netcom.com>
Message-ID: <6h9grm$jve@dfw-ixnews5.ix.netcom.com>
Source record: 146793

My post to the newsgroup that I had received the Icom UT-106 DSP Module for the Icom 706MII generated roughly 47 messages to my mail box in the last to days with lots of questions. I had not planned on installing the DSP unit until this weekend but I did so thursday evening. I will give a brief overview of the installation of the module, and what observations I came away with after 2, 30 minute sessions of listening to signals on 40 meters. I am not a technical writer, so keep that in mind. I got numerous requests for first impressions and second most asked question was how hard was it to install. I don't have any experience with DSP, my home rig is a Kenwood TS-850 so the only things I know about DSP is what I have read and heard from other hams. I have few pre-concived ideas about DSP. So here we go....

Installation

The unit comes with installation and operating instructions in the box and a photocopy of supplemental installation instructions, it shows better pictures of the install. Installing the unit consists of removing both the top and bottom. Unplug the P1 cable from the top side of the radio, feed it along the side and pull it out on the bottom side of the radio. A small white ribbon is feed thur the same opening from the top to bottom. To get the P1 cable through, it was easier to unplug the ribbon cable from the top side and feed it through to the bottom. The P1 cable you just feed through plugs into the J1 DSP unit, the cable that was already connected to the DSP when it was unpacked is feed through to the side to the top and connected to the J12.
Rehook the ribbon cable that was unhooked to get the cables along the side and install the new short ribbon cable on the bottom side and put the covers back on and your done. When you turn the radio on the functions are available under the S4 display. The instructions are very clear.

Functions

The unit has two basic functions. ANF(Automatic Notch Filter) can be turned on or off and is not adjustable It works in SSB, AM and FM. The NR(Noise Reduction) function can be turned on or off and works in all modes. It also has a level control NRL, this controls the noise reduction level from 0 -15. When selected this level is controlled by turning the M-CH control. The DSP is an audio stage dsp and not IF dsp.

Observations

Both nights I spent monitoring on 40meter LSB, noise levels were running S5 here and no optional filters were used.

ANF - The ANF was designed to attenuate beat tones, tuning signals and most single pitched tones. Thats why it does not work in CW and RTTY modes.

Listening to QSO's and hearing someone close to the frequency tuning up in almost everycase was eliminated totaly by switching on the ANF. I would say 90% of the single frequency tone type of interference were completely removed and the rest suppressed greatly. Signals that studdered or woodpeckered came through with little or no filtering.

NR - The NR was designed to reduce the amount of noise and pickout desired signals buried in the noise. The NR function reduced the noise levels, on strong signals(20 over 9 and up) the level could be turn up above level 10 and the noise was reduced to very low levels. The audio signals were also reduce but not to has high a degree, meaning I then needed to turn up the volume slightly. Not as good as FM but close. Moderately strong signals(S6 - S9) benefit the most from the unit. As I increased the NR level both noise and audio is attenuated, the noise at a greater rate. I now had to increase the volume a fair amount more to be able to understand the conversation, but copy was still good and 50-60% of the noise was reduced. Weak signals with or with DSP were still had to copy. I generally found that if I couldn't copy the conversation thur the noise without NR, then with NR was not going to either.

One oddity that I found while using the NR level was that increasing the noise reduction level sometimes the conversation would be readable lets say at level 5, turn it to six and the copy would not be as good, increase the level to 7 worse, then increase to 8 and it might get better. Did not happen all the time, not sure if the audio to noise ratio actually got better or was just a change in tone pitch? Need more time with it.

The operating instructions do say that if you turn the level up too high you can cause signal masking and distrotion, and it does do that. Some weak signals I listened to I was able to make them disappear even at level 10.

Bottom line on my first impressions, is it a cure for coping weak signals from the QRN? No.....I'd say the NR function made copyable signals much more pleasant to listen to by removing much noise but I honestly can't say it helped pick weak signals out of the mud. I am sure it will increase the pleasure of my mobile operating experience by being able to cleanup many of the signals. After I have used it for an extended period of time or use another radio with DSP, I am sure my opion will change to some degree. I hope this was informative for those looking for a few answers.....

>be a different story)

That will never work properly, not on any amateur HT. All aircraft radio voice communications use AM modulation, while all of the 2m amateur HT's transmit FM. Just getting the VCO and transmitter to operate on aircraft frequencies is the *easy* part. And no matter how you do it, the result would still be illegal.

You've just gotta have two different radios.

Dave

The Radio Amateur is:
CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Kishore,
I just purchased a MFJ-4035MV power supply. I know this is not the same model you're interested in but thought I would tell you a little about it since it is very similar.
I use it to power my IC-706MKII and it works very well. Excellant regulation. The only negative comment I have with it is the fan noise. If the fan circuitry is the same in both models you may find it a little annoying. The fan speed is a function of the amount of load on the supply. The more current you pull, the faster the fan runs. There is a decay time of about 2 minutes after the current being drawn stops. The fan will slowly "wind down" and eventually stop.

If I had it to do over again I would have purchased a Astron. They don't use fans in their supplies, at least in their linear models. I had considered exchanging mine, but it would have cost too much taking into account shipping and restocking fees.
Hope this helps.

Message-ID: <353AA8CD.9FB5B64C@cei.net>
Source record: 146515

A small variable cap used as a cacitive tuner can do it. A coil would make it better.
Look in Radio Amateur Handbook for details on building one for almost nothing

Message-ID: <353AA838.262208CB@cei.net>
Source record: 146516

You can replace 811's with 572b's

There is a bias diffrence in them. If memory serves the 572b has no
bias.
also the 572b's cost more <G>
IF your power supply can handle it you should get about 30% more.
(there are lots of dead brain cells here <G>)

Have you been contacted by a burro@panama.gulf.net or
something to that effect??? Let me know... he's telling a lot of ugly
stories and I'm gonna set things straight ... we agreed to swap a 1278B
for a tuner or 100.00 US cash he originally was asking 125.00 Shipped..
I said fine and before you know it it's shipped and on it's way here...
he would e-mail me DAILY and soemtimes twice a day as it took 3 1/2
weeks to get here which was the 8th of April... I sent him a M.O.for
125.00 US... and he hasn't gotten it yet, like 10 days later... so he
starts shooting his
mouth off ALL OVER that I ripped him off for 500.00$$$ Now given that it
took 3 1/2 weeks for the iem to arrive how does he expect the M.O. to
arrive in a week when our P.Office had 5 days off at Easter??? So i said
fine I'll send it back to you ... he said no there's no telling what you
might have done to it... P.S. I have no way of knowing if he has rcvd it
and won't know for a moanth after it has been cashed... also the reason
I didn't send the tuner was that it was going to cost 60.00 CDN to ship
it...so there's the story... 73 de Jordan VE2SWL/VE6...

1899. FS: Brand New Kenwood TM-261A 2-meter mobile.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <353AAC4D.FB2381DF@mtu.edu>
Source record: 146519
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a brand new Kenwood TM-261A 2-meter mobile radio.

I decided it would be better to put a dual bander in my car rather than drill holes for two mounting brackets, and would like to sell the radio.

I have the original receipt and all warranty info. I took it out of the box, looked at it, listened to it, and put it back in the box. Worked fine for listening. I have a 5/8 wave mag-mount antenna, in my apartment, sitting next to the steel screened windows, and it still was picking up repeaters my other rigs wouldn't touch from my car.

Full specs available at: http://www.kenwood.net
http://www.kenwood.net

I would like $240 for it, which is what I payed, minus tax, minus shipping. I will have it shipped to the continental U.S. upon receipt of money order for free. (Add $5 for C.O.D.)

I'm just trying to get back most of what I payed for it. I may lose the $35 tax & ship, but hey, it was an expensive mistake to buy the radio I shouldn't have!

Thanks,

Chris Buckley

>Steve -- W1SWR

Steve,
According to HRO, the TM-G707 is NOT a replacement for the TM-V7A!!!!
It IS a lesser version of a very good radio and should NOT depreciate
the value of the TM-V7A. Kenwood has no plans to discontinue the
TM-V7A at this time. So Don't be too hasty to de-value the TM-V7A.

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or komudo@feist.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section, 0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section. 0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

I have a friend who is looking for the Icom UX-97 1200 MHz unit and the UXR-96 Wide band receive unit for the Icom IC-970H Transceiver. If you will part with either of these units please contact me via this e-mail address or K7MH@Juno.com and leave name, phone number, and city you are in. I will forward the info and have him contact you. Thanks and 73. Mike, K7MH.

1912. Re: Recommendations on good HF Tranceiver?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Richard van der Riet <richardr@worldonline.nl>
Message-ID: <6hg86i$gq4$1@news.worldonline.nl>
Source record: 146532

Hello Dana,

I can only give you information on the following trx's
- FT-920
- FT-1000 MP
- TS-870

Before trading in my 'old' TS-850 I was given the opportunity to try them all out. The TS-870 in my opinion is a terrible transceiver, or better, RECEIVER, the transmitted audio and everything is fantastic due to its build in Mic-Equalizer, but when using the receiver on my Maldol 5-band vertical, I really lost faith in Kenwood. Noise, noise and more noise! I wouldn't recommend it especially when taking into account it's price!

The FT-1000MP would be my dreamradio! Great performance on transmit as well as receive, especially because of the OPTIONAL!! Collins filters (the one
I tried was packed with ALL of them!) really a big YES as far as I am concerned!
But then again, taking into account the high price and the optional filtering (which
you really can't live without), not my choice for the moment.

And then the FT-920.....what a radio (my current radio, you've guessed right ;-))
Great transmitter, wonderful receiver (a bit noisy at times when using a vertical!)
Afcourse having 6 mtr's in it helps choosing...but this would be my choice....
The DSP really helps eliminating QRN, QRM etc etc, great Noise Blanker, good Noise reduction and wonderful High and Low-cut filtering. I would have loved to be able to put in some extra filtering before the DSP, but unfortunately
that is not possible. Definitely a great radio at a reasonable price!

But if you are going for a new radio, you might be interested in the new FT-847?
160-10, 6 & 2 mtr's and 70 cm's as well.....sounds promising and this radio DOES
have the ability to put some extra Collins filters inside!!! Price should be around that
of the 920, so what's keeping you ;-)

Well hope this helps you a little, if you wanna hear my 920 in action, just send me a

little note and perhaps we can arrange a meeting somewhere on the bands...

73 and good trx-hunting! Richard PA3GWH

This 650 is 100w output multi-mode xcvr with internal p.s.(optional), 500hz cw filter (option) , Tone bd (option for using 6m or 10m repeaters). Has 100 memories, internal pre-amp...."hot rcvr" one of the best I've ever used. Also has PBT and 'auto-notch' & manual notch plus narrow / wide BW choice. Will work DC by merely changing to DC cable. Is 'mint' condx, am original owner, have box & manual. Want $1000 shipped.
Reason for sale : selling FT-990AC and FT-650 and FT-726R using the $ to purcahse ONE rig to cover HF thru 2m.
Will trade the FT-990AC with optional 1.8 ssb filter & the FT-726R w or w/o the HF module) $ difference? OR the FT-990AC & the FT-650 for an IC-746 with 500hz 455 i.f. cw filter. AL K2SPO Rochester, NY

This package goes beyond complete. Check out the list below, both Windows and Macintosh platforms are covered, and all the accessories you could want (well, all the accessories _I_ ever wanted. :-)

Everything is in great condition, well cared for, ready to use. The Zaurus itself is in pristine condition, no scratches; it's lived in the padded leather case all it's life.

I've put the current prices from the Rupp catalog (www.mobilescape.com) rounded up to the nearest dollar) beside everything so you can see what a great deal this is.

If everything was purchased new today this would be over $1000 worth of organizer and extras,.

First $450 offer gets it. If you can't afford $450, send me your best offer, I'll consider it. Please don't send me offers on parts, I want to sell this as a bunch.

So what's it include?
Zaurus ZR-5800: 2MB RAM, Modem, Backlight, Spreadsheet, Compuserve link, Addresses, Notes, Calendar, etc. (orig. $400)

Two Cases:
Deluxe leather case (orig. $60)
Soft Naugahide case (orig. $10)

2 PC connector cables (orig. $50 each)
1 Mac connector cable (orig. $50)
1 PC Infrared connector cable (orig. $90)
2 AC Power supplies (orig. $15 each)

1 MB PCMCIA Card (orig. ~$130)

Oak desk stand and stylus (orig. $50)

Zaurus link software PC (orig. $15)
Zaurus link software Mac (orig. $15)

Game Pack: Poker, Othello, Mastermind (orig. $50)

Extra (Damaged) ZR-5800, for spare parts(?) ($???)

Back-Issues of Digital Ink magazine - Tons of Zaurus use tips. (Year's subscription was $30)

1927. Re: SB-200 question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: "Joseph A. Kolb" <jkolb@sunet.net>
Message-ID: <wls_.1807$XJ2.4024407@news2.mia.bellsouth.net>
Source record: 146576

I don't own an SB-220; however, I can say that you should not use the amp for AM. If you do you should use it in the SSB mode, which is linear, and not the CW mode, which is non-linear. If you insist on using it for AM, be sure to reduce the power to not more than half the full output of the amp.

Incidentally, you caption your question with SB-200 and in your message you refer to an SB-220. They are not the same. They have different tubes. The 220 being a little heftier.

White Room wrote in message ...
>The SB-220 amp has two mode settings, one for CW and one for SSB.

1928. FS: Kenwood TM-642A + Comet 2, 1.75 & 70cm base antenna + triplexer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Cregger <ecregger@jnlk.com>
Message-ID: <353A5891.62AF12BD@jnlk.com>
Source record: 146577

I am the original owner of an 18 month old TM-642A that has never been mobile, dropped, modified or otherwise abused. The unit includes an optional 70cm module providing the rig with the 2m, 1.75m and 70cm bands. The optional tone decoder board is installed and working perfectly also. It has worked flawlessly since original purchase. The rig has spent the majority of its on the air time in the low power mode since I am close to many repeaters. An excellent crossband repeater.

The Comet triband base antenna for 2m, 1.75m & 70cm is in pristine condition and is very effective. Ditto the Comet matching triplexer. I don't have the model numbers at hand, but they are the same as is currently being sold, so the AES or HRO listings can provide you with any additional information that is needed. An excellent combination.

The equipment looks and works so well that no one will ever suspect that you bought it used. Add up the catalogue prices and compare to my selling price for the combo of $975 plus shipping. Also realize that 220 gear is getting scarce!

I have sold ham rigs on this newsgroup before and have had zero complaints. Please contact me by email THEN by telephone. I am disabled and never answer the phone directly because of too many damned telemarketers. 8>)

1938. FM Xmitter for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: "Kirk R. Patton" <kirkpatton@sprintmail.com>
Message-ID: <353A65AE.18F@sprintmail.com>
Source record: 146587
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes,rec.audio.pro

FOR SALE:

110 watt stereo FM transmitter -- uses Gates TE-1 crystal-controlled transistorized exciter (10W output) driving a modified GE Progress-line transmitter (power-amp only) with 5894 tube output. Includes spare power-amp, new spare tube, setup mounted in heavy 6-foot steel rack. Works well and reliabally. With manual for TE-1. $250, local pickup only.

8-channel Ampro solid-state stereo broadcast console -- four inputs per channel, four channels have gain for microphone input. Built-in 20W monitor amp and muting functions. All inputs are transformer-coupled (nice iron) and use rotary stepped attenuators. Unit functional, needs some work. $150, local pickup only.

Misc. power transformers, mostly with high-voltage windings, most pulled from old tube-type test gear (HP, etc.). Many potted, a few antiques with ceramic insulators. Some look nice, some don't. Free for local pickup.

I'm in the Kansas City area . . . have to get rid of this stuff in order to move. Email me if interested, I don't read all these newsgroups. So there.

This is precisely why I never waste time on the so-called auctions.
They are really not auctions, since the sellers are merely fishing for
a high price and don't have to sell, as they would in a real auction.
Now, they can buy their own goods, but they have to give the
auctioneer his cut. . .

1950. FT-50R Power Button

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: jeffj@koala.scott.net
Message-ID: <6he0gi$o7i@news.scott.net>
Source record: 146599

I have an older FT-50R who's power button seems to be acting strangely. When the unit was newer a light press of the button would easily turn the unit on or off, but here lately it requires much more pressure to do so. Has anyone else experienced this problem? I realize that 'wear & tear' is normal, but does anyone have any suggestions on how I might remedy the problem? Thanks in advance!

73
Jeff

From: CLS <chulndrs@pacific.net.sg>
Message-ID: <01bd6bea$e0379420$LocalHost@p-166>
Source record: 146606

Hi,

Because I started just all over again with this hobby there are a few questions about above mentioned transceivers. The TS870 is a new model with slightly better specifications than the TS950 model. According to my information. But there is a very big difference in price. Okay the TS 950 has some more functions but I think the basics of the TS870 are better. Is it also necesary all the extra gadgets on the TS 950 model. Am I right in this conclusions?
Because I have less experience in operating HF equipment can some body inform me why you could better buy a TS870 or TS950.
In my opinion is the most important thing the sensetivity of the receiver, and ofcourse a good antenna installation.
I hope that somebody will inform me more about this models, it is not an easy decision to make a choice.

Regards

Kees

1960. Re: FT-50R Power Button

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Mike Morrow <mmorrow@companet.net>
Message-ID: <353A830B.72B1@companet.net>
Source record: 146609

Jeff, this seems to happen when the contact traces on the PCB under the power button get dirty. Until you can get around to cleaning the contacts, you should be able to get the radio to turn on with a VERY QUICK momentary push of the button.

Cleaning the traces will take about 10 - 15 minutes, because you'll have to open the radio (very easy to do). Don't try to spray cleaner into the assembled radio, as there are moisture barriers to prevent that.

1. Gently pry off the nicad warning label just above the three power pins in the back. (You'll be sticking this label back on when you are done.)

2. Unscrew the two small screws that you'll then see ALMOST all the way out.

3. Push on the screw heads to push out the keypad, then finish unscrewing the screws, and remove the keypad.

4. Remove antenna, and pull off the knobs on the radio top.

5. Gently spread the radio's case outward from the rear, at the level of the power pins, while pushing on the connector that goes to the keypad, thus pushing the radio assembly out the back of the case.

6. You can now see the circuit board traces that lie under the power button (which should still be stuck in the case). Wipe the traces with some electrical contact cleaner.

7. Push out the power button, and clean it too (circular dark pad).

8. Put it all back together, reverse of above. Some notes:
a. Before starting reassembly, push out and remove the cloudy plastic LED light guide at the top of the case. After the radio is put back together, push the light guide back into place from the top outside. (Otherwise it's hard to get the light guide to line up properly during reassembly.)
b. Make sure the various gaskets are not pinched or twisted as you put it back together.
c. Make sure the PTT/display light/monitor push buttons "click" OK after you get the radio back in the frame, and pull open the rubber external power and mic covers before reassembly to avoid pinching them.

Yaesu also will send you a shortend power button for free if you contact them by e-mail (see tech support e-mail address at www.yaesu.com). This is a great item if you have problems with the FT turning on inadvertently as you carry it...highly recommended. Obviously, a great

time to install it would be when you are doing the above.

This is also a good time to do the MARS-CAP mod by desoldering the solder bead that is visible on the PCB center-left side as you look at the PCB just before putting the keypad back on. (This will reset the FT and loose all programmed info, though).

The FT-50 is one fine piece of equipment...I've got three of them. (An aftermarket antenna like the Comet SMA-3 is needed to get decent out-of-ham-band reception, though.)

73 ... Mike / KK5F

Tom,
QST had an article on an 8-bander. See the 6/94 issue, p. 68 (I'm not sure
about it handling 20 watts). Also, what about a good ol' inverted Vee and a
tuner? 73 es GL,
Bill N3WK

1963. WANTED ICOM IC-T8 programming software

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: eric_fre@hotmail.com
Message-ID: <6heaal$i53$1@nnrp1.dejanews.com>
Source record: 146612

Can anybody e-mail me or send me a copy of the software used to program the
icom IC-T8 tri bander.
I am happy to negotiate renumeration!
As it is not yet available in Australia and I can make the hardware.

Cheers
ERIC.

PLS reply via e-mail.

1966. Re: ICOM IC-746 verdict?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Sean <XXXsbaxter@gte.net>
Message-ID: <6hcuc0$b59$1@gte1.gte.net>
Source record: 146615

I have played with the 746 for a while, but more importantly a friend of mine (N4XU) bought an 746 about a month ago and he has said the following:

Very nice radio, all functions work as advertised. The NB is ok, works very well on pulse noise. However, any signal within +/- 25 khz that is over S9 will pump NB and cause distorsion on rx signal. DSP works well on CW and data modes. NR on SSB is not so great. N4XU also has an Kenwood 570. In rx comparisons with this radio the noise floor is more quiet on the 746, selectivity is better on the 746 as well. The 746 has 2.4 Khz filters in both IF's for SSB so you can use the Twin Pass Band tuning, each IF tunes one side of the signal, the filter skirts are excellent (sharp). With TPB you can take the 2.4 Khz down to about 1.8 Khz wide. CW operation is good as well. Would recommend 500 Khz filters in both IF's if you do CW work. TX audio is very good. With TPB you can take the 500 hz filter down to about 250 hz wide.

73, Sean - K3XT

Need a small Very light weight HF antenna for 80, 40, 20 & possibly 17
meters.

Should be able to handle 20 watts of power. The ligher the better!

Any Recommendations?

Thanks
tnic@idt.net

1968. Small HF antenna tuner recommendations?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6hctqp$mjg@nnrp4.farm.idt.net>
Source record: 146617

I am searching for a small (Smaller the better) to very small
antenna tuner that is energy efficent and can handle 20 watts.

I intend to use it for a low power HF rig that puts out 20 watts while
backpacking.

The radio will be a multi band (if SGC ever produces the 2020) so the
antenna tuner will be a must in my case.

Any recommendations?

Thanks
tnic@idt.net

I have the following items For Sale:

Kenwood MC-85 Desk Mike - very good cosmetically but audio distorted.

Has 8 pin cable wired for TS-440S, and 4 pin cable. No manual

$50. plus shipping.

Autek QF-1A Active audio filter. Very good condition, works fine. No

manual.....$30. plus shipping.

Dentron Jr. Monitor compact antenna tuner. 160-10 meters coax, balanced

lines, random wires. 300 watt PEP rated with built-in balun and RF

meter. No manual. Works well. Face is in real good shape, but cabinet

cover could stand a fresh coat of paint. Great for mobile / field day.

$35 plus shipping....

Radio Shack 20/200/2000 watt power/swr meter. In perfect shape. No

manual......$25 plus shipping.

Hi Newbie,
I would bet that if you opened up the covers and went to the power
supply board, you would find you problem in one of the regulators or
at least a component in the low voltage power supply. Check also the
regulator that feeds the counter/display. It is probably an 8 volt
regulator. It definitely sounds like a power supply problem. Good
luck...Dan WB4DAV

1979. SB-200 question

Newsgroup: rec.radio.amateur.equipment

My advice, get an FT-8100. You will not be disappointed. You will not only be doing yourself a favor, but everyone else on the air. (They have the most beautiful TX audio i've heard). I know two local people that have the V7A and it's not quite as good a rig.
stay away from those "one band at a time" radios.

Hi all!

I am looking for a small HF rig for mobile use. A 706 Mk 1 or 2, DX-70 or TS 50 will work.

Will pay cash or I have many trade items that I can trade up/down and sideways with. For example, Yaesu FT 50 (5 watt version) as new, AOR 3000A and AOR 8000 both as new, Sony 2020 portable. All with original boxes and manuals with very low usage.

What have you?

Conversation is a two-way street. If you have nothing to offer, chances are
you will get nothing in return. It's that simple.

1999. Ameritron ALS-600 Audio Distortion!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: kovar <kovar@ia.net>
Message-ID: <01bd6bae$a36aaa00$a0d0a0cd@kovar.inav.net>
Source record: 146648

I have two friend that have ALS-600 RF AMPs they purchased new.
They seem to have what I would call Crossover Distortion in the Audio.
Does anyone else have the same Amp and suffer from the same Audio comments?
The raspy sound they produce reminds me of a Solid State CB RF amplifier
that is not biased correctly.
What we have tried so far is:
1. Rewired AC wiring directly to fuse box with 25 feet of #10 wire.
2. Selected four different input drive levels into the Amp. 30 threw
70watts.
3. Speech processor off and on.
4. Tried different radios.
5. Used tuner/ no tuner.
6. Direct into 50 ohm dummy load.

Is Anyone truly happy with this AMP?

It sickens me to think two of my good friends have bought into this product
that
is possibly such low quality.

Can anyone provide any solutions or conformations on performance of this
ALS-600.

Thanks,
Jack Kovar

> your suggestions here.

Mr. Newbie

I have an FT-890AT that just came back from Yaesu for the
same type of problem except that my unit would intermittently blink the
display on various bands. The first time I saw it do this, I thought
that I new what was going on and a quick call to tech support confirmed
my suspicions. The display blinks when the Phase Locked Loop in the
synthesizer circuitry loses phase lock. Anytime phase lock is lost, the
transmit circuit is disabled since it is possible to transmit totally
out of the ham bands during this type of condition. You will see the
display light as the loop is trying to regain control but as it ramps
and does not lock, then it will blink off again. This is evident in the
receive as well since you can hear noise when it is trying and then get
quite when it blinks off. My problem was simple, the main reference
oscillator crystal at 10.485760 mhz was intermittently drifting off freq
far enough for the loop to unlock. Your problem may be more involved
since it sounds like the vco that controls the bands for 10 12 and 15
may have a problem in your rig or the circuitry that controls this vco
circuit is not working? The FT-890AT is basically the same radio as
yours but has more bells and whistles and this rig uses four separate
vco's to generate the local oscillator signals for all the bands
covered. Examples are as follows:

one covers the bands from 100khz to 7.49999 mhz
the next from 7.50000 to 14.49999 mhz
the next from 14.50000 to 21.49999 mhz
and the last from 21.50000 to 30.0000 mhz

and yes it could still be related to the different voltage regulators used thru out the radio, I have not looked at the schematic to see if there is a separate supply for each vco or not but this is the only way that I see it could be related to the power supply circuitry. I fix aircraft radios for a living but I do not claim to be an expert on my radio gear since the guy that really know his stuff is the one that fixes them day in and out and gets to know the particulars of various models within a product line. I can fix the radios that I deal with in my sleep but I would rather let the factory expert work on my ham gear than to put in all the time and effort trying to study the schematics and still not really being sure about what all the different circuitry is doing. I guess what I am trying to say, is that I think your radio may need a trip to the factory. My repair only cost $78.00 and they even installed a couple of mods that I did not know the radio needed and they replaced the backup memory battery like I requested since the rig was there. Good luck and all I can tell you is that my rig works perfect since I have had it back!!!

I just purchased one of these klm pa 4-160bl amps.
I did not get a manual with the thing.
I have some questions.
How much power input is this amp designed for?
Will it work on SSB?
What is the rca connection in the back for and what to connect to it?
What is the pot in the back hole for and how do I set it?

Wow, I guess i need a manual, does anyone have one of these or can you
help answer my questions.
Thanks a bunch and please email me

Hello. I'm interested in buying a used MB+4S Amplified Desk Microphone. I�m interested in just the MB+4S, I don�t want the one that has a roger beep on it. I would like it to be in excellent cosmetic and working condition. A 9V battery, original box, manual, and 5 pin female plug are are large pluses. Please e-mail with condition, kind of plug, what it comes with, and price. Thanks a lot for reading.

I have heard of CB'er buying a IC-781 just to have the baddest CB on the band.
In my opinion only an idot would spend seven thousand dollars for a radio to use on the CB band.

In article <3537C417.1200F24E@your-net.com>, w8pu@your-net.com says...

I got a e-mail from Kenwood ,I asked them if the new kenwood TM-G707a would
replace the TM-V7a,they said NO...
Reason is the V7a uses a dual IF,where the G707a uses a single IF.
Kinda like Icom and there IC-2710H dual IF,and the IC-207H single IF.
Oh well maybe it is time to e-mail Kenwood and find out again.

Anybody using either of these radios?

If you are what do you think of them? Is the front end likely to cave in with close pagers? Or is the front end pretty good at keeping out of band signals out? It does seem to have extensive wide band receive. What is the audio quality tx'ed and rx'ed like? Between 200MHz & 300Mhz can you put the rx into AM?

Thanks,
Gav

2032. Re: Diplexer - retuning help

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: perkiert@nildram.co.uk
Message-ID: <3539d465.10250972@news.nildram.co.uk>
Source record: 146701
Cross-posted to:
alt.ham-radio.packet,alt.ham-radio.vhf-uhf,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,uk.radio.amateur

Well that's a big question. Diplexer / cavity tuning is a bit of a
black art .. I remember a bit of RSGB book I think it was micro wave
handbook covers it a little. The quote was something like
" In professional circles it is common practice (by those who should
know better) to couple a filter to a network analyser and twiddle
around until the required result is obtained" So provide you have a
network analyser you could have a go at that. Last year I spent some
time in two Local companies (In Aylesbury Bucks) tuning 1800Mhz
cell phone base duplexes. Com-Dev and Airtech I do not work there
anymore but the experience was interesting. Com Dev took training
seriously where as Airtech just get people off the dole queue let them
lose and if they managed to tune them that was that. However Back to
your problem Asuming you can get use of a network analyser the next
unknown is will the filter tune down to 430 MHz. Lets assume yes Then
start by checking out the diplexer as it is and identify the pass
bands (insertion loss) and return loss though each half. Now it is
difficult with out knowing a bit more about the diplexer in terms of
number of cavities and other things that could be in there (poles,
cross couplings) so assuming its a simple three cavity per leg. How
is the tuning done (screws with locking nuts?) the main tip of the
trade is if one has to "move" a filter then for moving down . start at
one end and tune each screw (inwards for lower freq.) just a little
but each one the exact same amount (physically) if done right the
passband after you tuned them all the trace will be similar but
shifted down. the point is that you do this blind (not watching the
trace as for instance the first screw might disrupt the display all
over but the next might correct a bit. Repeat the cycle just moving
the screws a tiny amount each run though. The interaction between the
cavities is a problem, What you must do is move the lower side down a
little then the other side down the same amount IMPORTANT to keep each
leg at the same spacing i.e. do not let any of the upper frequency
pass band cavities "Cross in to the lower frequency side"
The diplexer will most likely have been set up covering a band
of frequencies in commercial use You have just spot frequencies in
mind That may be an advantage however due to interaction you may find
it impossible to set all the cavities spot on as when the close in it
all goes pear shaped!!
It may be that you might have to start the tuning from scratch. So a
rough guide would be first to rough tune each leg so that by watching
insertion loss try to position each cavity peak to where it should be.
then by watching the return loss tune for the maximum loss, You need

to identify the correct number of peaks (dips) in the band, by
watching the return loss as you tune each screw the display will alter
but not as you might expect, The main mistake is trying to get it
right by concentrating on a particular screw, The adjustment should be
very small on each one moving on to the next in order then repeating
not going back and forth between two! i.e. 1-2-3-4-5-1-2-3-4-5
-1-2-3-4-5
the return loss will drop as you experiment you will see that one
screw may push two dips down one up, another may push dips 1 and 4 up
2 and 3 down one may tend to see saw the dips, by careful manipulation
with all the variation's one can over time develop a skill in the sort
of Magic trick(Pick a dip and increase the return loss at that
frequency. I must stress the necessity to constantly be checking both
legs and gradually homing in. All ports must be loaded (50ohms) at all
times.

Message-ID: <3539E028.4456439D@domewhere.com>
Source record: 146704

I have a Yaesu FT-840 transceiver that is a couple of years old that I bought in the past six months used. The other day I was using the 10, 12, and fifteen meter bands when the thing all of a sudden went crazy on me. The orange and black display was blinking on and off and I was in normal operation mode. I was not using any save features or messing with the VFO or memory buttons. I was transmitting and then the display began to blink on and off and wouldnt stop on each of those bands. During that time I also could not transmit anything on my radio and the display and frequency kept on blinking. This only occurred on these upper three bands while the rest of the bands remained normal for several days. Every time I even turn my frequency display or use bandswitching the display blinks on 10,12,15. I don't even have to transmit and then the blinking begins. Does anyone know what that is and why it does that. Did something go permanently wrong with the rig? Thanks and please leave your suggestions here.

Spectrogram version 4.2 is a freeware dual channel audio spectrum analyzer for Windows 95 which can provide either a scrolling time-frequency display or a spectrum analyzer scope display in real time for any sound source connected to your sound card. Spectrogram allows unlimited recording and playback of sounds from the audio spectrum display and can provide very high resolution spectrum analysis of wave files with a wide choice of frequency bands and frequency resolution and either linear or logarithmic frequency scales. Spectrum data logging capability is also provided. Version 4.2 replaces 4.1.2 and adds useful new features including spectrum averaging for noise reduction and more flexible scanning and recording capabilities. Spectrogram is ideal for any purpose related to sound spectrum analysis including

Analysis and identification of biological sounds
Analysis and identification of human speech
Analysis of musical performances
Tuning of musical instruments
Evaluation and calibration of home audio systems
Ham Radio audio reception and tuning

Spectrogram 4.2 includes many features comparable to those of expensive commercial programs. If you need to be convinced, compare Spectrogram 4.2 to commercial audio programs described at the following locations.

http://home.t-online.de/home/raimund.specht/avisoft_.htm

Contact rshorne@mnsinc.com for additional information.

2038. Re: TM-V7A vs FT-8100

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: reportman@yahoo.com
Message-ID: <6hctuuncu1@nnrp1.dejanews.com>
Source record: 146707

You should check to be sure that the TM-G707A is a true dual bander. The info on the Kenwood products page leads me to believe that it is actually a very wide band radio, like the Yaesu FT-50. It advertises cross-band repeater access, not a crossband repeater function. This gave me the conclusion that you could enter TX/RX freqs that were in different bands, on one memory channel for use with a cross band repeater, but not actually set up the radio for V/V, U/U or V/U operation.

Ed

Looking for an IC-575 in VG to Mint condition. Prefer with original docs, though copies are OK.

Please respond with price, condition, and any included accessories (mics, PS, etc) via email.

Thanks,

Ron Ricketts

2041. SGC-2020 Not available

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-19 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6hcta8$s2e@nnrp1.farm.idt.net>
Source record: 146710

I have been calling SGC about there 2020 model radio.
There web page has been saying the radio is available since January.

Jeff at SGC has been telling me for MONTHS the radio is in production and they are "working hard to fill back orders".

Now there web page says they are shipping to Europe! What a pile of Bull S*** in my opinion.

Jeff said they heve been shipping to dealers but could not name any.

Anyone know why SGC is advertising a radio in QST that does not appear to be available?

>

AIUI, what you want to do is simultaneously operate
two independent *transceivers* on different frequencies
into the same antenna.

This is not quite the same thing as commercial duplexers are
designed to do.

What you appear to want is a 3-port device that will:

Couple power from port 1 to port 3 at frequency A whilst
isolating port 1 from port 2 at the same frequency.

Couple power from port 2 to port 3 at frequency B whilst
isolating port 2 from port 1 at the same frequency.

Couple power from port 3 to port 1 at frequency A whilst
isolating port 3 from port 2 at the same frequency.

Couple power from port 3 to port 2 at frequency B whilst
isolating port 3 from port 1 at the same frequency.

What you have there is a 3-port device that should, if it
is a well-designed duplexer:

Couple power from port 1 (TX) to port 3 (antenna) at
frequency A whilst isolating port 1 from port 2 (RX) at that
frequency.

Couple power from port 3 (Antenna) to port 2 (RX) at
frequency B whilst isolating port 3 from port 1 (TX) at that
frequency.

In addition, isolate port 1 from port 2 at frequency
B, in order to keep transmitter-generated noise
out of the receiver.

The two are not quite the same thing.

There are many different ways of designing duplexers
to achieve these results. Good ones use various
combinations of bandpass and notch functions, and
may or may not be reconfigurable to do what you
want. In any case, the required change in frequency
will probably involve not just retuning, but physical
alterations to both the resonators and the coupling
lines between them, unless you can put up with high
insertion loss and a soggy response.

If you can get hold of some combiner system cavities,
that would a much better way to do it. They're big,
though. Some are actually made from aluminium beer
kegs!

I have the following runs of Andrews LDF5-50A heliax 7/8" for
sale. All the runs have been checked and meet mfg specs for
performance.

22 feet new $35

29 feet new $45

65 feet used $100

107 feet used $155

100 feet used $150

108 feet used $155

130 feet used
has roofing tar
on jacket $130

All heliax has been checked and meets factory specs.

All prices are plus shipping. If small enough, will ship via UPS.
Larger shipments via motor freight at 50% discount on freight rate
to cities where discount applies.

Nothing has happened to him. Some people just don't like his advocacy of alternative scientific viewpoints. For example, cold fusion is real, you can build a motor from all permanent magnets, and you can destroy viruses by electrifying your body. Those are the ones I'm aware of, anyway.

Jeffrey,

I picked up the UT-106 today at Jun's in Culver City, CA; apparently
they received a bunch last week.

Installation was not trivial, but working on the 706MkII never is. But
your advice really did help.

My initial comments re performance are:

1) On SSB, as good as the DSP in my TS-570D - perhaps better. Really
reduces fatigue
2) No data on CW or digital, but I will try it later
3) Very low levels of noise reduction (3-5) do very well
4) No test of hetrodyne cancel (did not hear any)
5) Tricky to install; very easy to use (good for mobile!)
6) Not as good as my NIR-12 (but the NIR-12 is about the size of the
entire 706MkII, with DSP installed).
7) DSP+1.9KHz SSB filter definitely better than either alone.

Overall, I've very satisfied.

Back to play with it some more.

1- How loudnoticanle is the cooling fan in the FP-800 power supply/speaker?

2-Does the fan run all the time, or just when it heats up?

3-How good is the speaker? (better than the one in the 890/900?)

4-Cosmetically, does it match the 890 or 900, which means, are the letters "yaesu" "FP-800" etc Chrome colored or white? Also, is the case color Grey or white?

All answers appreciated. Basically, I am looking for a matching speaker for my ft-900, and if this matches I'll unload my Astron 20M and get this. Yes, I know its a bit pricey...

Thanx -- Pete

> broadcast service?

Since Never. And the TE-1 hasn't been for years, either. That's not the point.

Possesion of this equipment isn't illegal, nor is its sale. You can do illegal things with it. You can do legal things with it. You can use it responsibally, or irresponsibally. Like your car.

Responsible use of this would include backup or emergency use for a severely budget-restricted liscensed FM station, or a community station. Responsible use would also be, IMO, quality, interference-free pirate broadcasting. This transmitter is capable of such, with an RF output cleaner (yes, I've measured it) than the majority of low-power type-accepted equipment that I've seen. Like all transmitting equipment, it requires a decent amount of RF experience and general give-a-damn to use properly. The same goes for your big ol' sweep-tube linears.

Get over the whole "illegal = irresponsible = immoral" crap. This is good stuff at a bargain price.

KP

will someone please assist me on this one
i have a commercial antenna base for the 160 mhz range it was a folded dipole very nice assembly i have removed the element and 4 ground radials im now going to use this with local races group and change it to 6 meters , i have 4 60" ground radials 3/8 "dia aluminum now the question is with a 54" emitter that would make it a 1/4 gruond plane correct??

and if i put a 108" emitter and folded it back to ground that would make it a 1/2 wave folded dipole correct??

which antenna would have the best proformance ?

While I agree that DSP on my TS870 is not real effective on SSB, it is fantastic on CW. It has SPAC (digital filtering of noise). I live in a high QRN area and signals in the noise that are very difficult to copy become 579 with this on. The only problem might be for speed demons as it shortens the code elements and copy above 35 WPM is difficult, but that's not a problem for most of us who stay well below that. Further since the bandwidth DSP filter is in the AGC loop, with steep skirts, strong very close adjacent signals disappear with no noticeable loss to the intended signal. In the old days I had to make the old brain strain to listen into the noise and to separate the signals..... no more.

<<<<<<<<<<<<<<<<<<<<<<<<David: Well, the DSP assisted jobs sound very, very impressive under mildly
difficult conditions,

Hosfelt Electronics, latest catalog, page 11. Rare 14 volt grain of wheat bulbs are 35 centts apiece in quantity of one. Part no. 25-220. They will probably make better price in more quantity. Phone no. is 1-800-524-6464. You can get a free catalog (186pages), and their prices are very good. Their service is fast and accurate. In addition to the Rare 14v grain of wheats, they have a bazillion lamps and almost all general electronics parts as well as some surplus items. I dont think they have a web page yet, but I have bought from them for over 10 years with no dissapointments.
Regards, Don

2073. Q: MIL-STD 810...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-20 00:00:00 UTC
From: aki@Sun.COM
Message-ID: <6hg4ov$q3j@engnews1.Eng.Sun.COM>
Source record: 146443

I see radios that say they comply with the strict "MIL-STD 810"
specification.

So my question is where can I find a copy of this MIL-STD 810
spec? Can someone please give me a pointer to it on the net?
I'd like to see what kinds of test a radio must pass to be '810'
compliant.

Another question, is there a difference between the 'MIL-STD 810'
spec and the 'MIL-STD 810E' spec? What's the 'E' signify?
Maybe 'E' is 'easy' or perhaps 'enhanced'?

Thanks in advance for any input... -DA

The FCC is currently considering licensing low power FM stations
for use on 'unused' local frequencies in the FM band. Only those
causing interference to other licensed operations would be
considered pirates. Presumably there would be no type acceptance
of equipment, since there would be no way of inspecting sites.

I have a Motorola SP50 UHF Radio used only 5 times in Brand Spankin' New Condition with antenna, full capacity Nicad pack & drop-in rapid charger. This is a two channel radio and will transmit from about 400mhz to 470' something mhz. The radio is about 1 year old if that and is a full powered radio with the option button programmed for low powered 1 watt setting when full power is not needed.

No reasonable offer will be refused.

I would be willing to trade it for a Yaesu FT50R, ICOM 706MarkII or any HF base radio that is is either last years model or current model.

Remove the 'X' from my EMAIL address to reply. Send all offers to me in email: xandrew@tropicom.net

2083. Suggestion for SSB Marine/Amateur radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-20 00:00:00 UTC
From: Scott Beers <sbeers@mediaone.net>
Message-ID: <6hfjj6$e83$1@brnws01.ne.mediaone.net>
Source record: 146473

Hi all,
I am an advanced class amateur radio operator (and a amateur class boater <g>). I do a little amateur HF work. I am considering getting a radio that will do both Marine SSB MF/HF as well as Amateur frequencies (legally). I would like a relatively modern rig (solid state) that will cover all of the bands of both (if available). Something with an automatic tuner (or available to purchase one) would be nice.
I am looking for suggestions on makes and models as well as guesses at what I might expect to pay for a used version of this radio. (Also consider trading toys)

It is *very* unlikely that the FCC will return to licensing low power stations. They stopped because of all the mutual interference problems and lack of rule compliance due to low power broadcasters. But if they were to resume licensing low power stations, they would almost certainly require use of Type Accepted equipment as they did previously. (Even an unlicensed service like CB is required to use TA equipment.)

And if a station is licensed, the FCC would then know where it is located (that would be on the license), so they could pull inspections. The FCC hasn't been very active in performing their legally mandated compliance duties of late (they've laid off most of the field staff and hired a bunch of DC lawyers to run spectrum auctions), but that could change very quickly.

A new Administration, or a Congress read the riot act by the NAB, could get the FCC back to doing their legally mandated job in a hurry. Then the RIs would again be out looking at stations and making sure that their equipment is TA, that towers are properly marked, that proper logs are being kept, etc. I think most of us in broadcasting would welcome that.

And many amateur radio operators would similarly welcome a return to proper regulation of the amateur service. A few thousand pink QSLs with stiff fines attached would go far toward cleaning up the mess that HF amateur radio has become.

One of the problems that compliance activities have faced is the inability to collect fines. The way deliquent student loans are now being handled could serve as a model to change that. They're turned over to the IRS, and a levy is placed against the offender's income through the payroll withholding system. The FCC could do the same for fine collection. (Some hard jail time for the worst offenders would have a salutory effect too.)

Hi all
I have a for sale FLUKE 6060A/AN Synthesized Signal Generator.
Original New in Box (unused) 2 PCS
If this is something you can use, make me an offer.
Frequency Range ..... 0.01 MHz to 520.0 MHz in two band:0.01 MHz to
244.99999MHz 245 MHz to 520.00000 MHz
Resolution : 10 Hz
Amplitude (3-1/2 dight display)
Range (Indicated) ..... +13 (+13 peak on AM)to -127 dBm;
Resolution..... 0.1 dB (<1% or 1 nV in volts)
Accurcy.....+ - 2.5dB.
Amplitude Moudulation (two -digit display)
Depth Range.....0% to 99%
Resolution.....1%
Accuracy.....+ - 6% of setting for internal rates; RF peak amplitude
of +13 dBm or Less
Power..... 115V, 230V ac + 1 10% 47Hz to 400Hz, <100watts.
Tel :714-778-5151
Thanks

Did it ever occur to you that it takes two to make a conversation? It's not new to bow out whenever the content of the exchange gets so light as to be uninteresting, but I've frequently been surprised what a seemingly unrelated comment by me brought out of the other party and what interesting "threads" it sometimes led to. Frequently other hams join in who were just monitoring when the interesting stuff started, and who now find reason to join in.the proceedings. This frequently leads to extensive roundtables that go on for some time, interesting all the way, on most any subject you could think of. Don't blame ham radio for your own shortcomings as a conversationalist.

One of the most interesting on-the-air groups I get into is headed up by a fellow who is a wheelchair quadriplegic, has very limited usage of his upper extrremities and still builds amplifiers and tuners. He is also an accomplished machinist and gunsmith, and is knowledgable in a wide variety of subjects. Throw a comment out for this crew and it draws anything but dull responses....There are a lot more people like that on tha air than you evidently could imagine.

Good points, Bill.

Fixing a switching power supply can definitely be a good mental exercise!
:-)

I have found two items to be indispensable when working on one: 1) a good
manual 2) a dual trace storage scope with a very high chopping rate.

Aw, c'mon now - he's good for a chuckle at any rate.
He's one of THE BEST Trollers I've ever seen! Gets a
big rise outa the unsuspecting (and/or the self-righteous)
EVERY time. You gotta - grudgingly, I admit - respect
that kind of talent, even if it is saturated with p**s 'n vinegar....

I worked with a guy like that once; watching his effect
on those around him was a real hoot, too. Harmless sort,
as long as you didn't take what he said personally or let
it get under your skin. If you did, you'd just painted a
big target on your forhead as far as he was concerned.

Subject:
Crown Amplifier
Date:
Fri, 20 Feb 1998 10:47:20 -0500
From:
CARL DOMANICO <cmd-dell@worldnet.att.net>

For Sale: Crown International PSA-2X Professional Self-Analyzing
Stereo/Mono Power Amplifier....

If your looking for a Super-Powerfull,Highly Reliable, Amplifier you
came to the right place.....It's a Cream Puff, Mint Condition, I'm the
Original Owner. It's very Powerful, Rated at: 275 Watts RMS Per Channel
into 8 Ohms...460 Watts RMS Per Channel into 4 Ohms...700 Watts RMS Per
Channel into 2 Ohms. These are very conservative Ratings...more like
335 at 8 Ohms.... 640 at 4 ohms 840 at 2 Ohms...Per Channelï¿½.
It Weighs 57lbs/W Rack Handles. Dimensions: Height 7" Width 19" Depth 17
1/2"..*..I also have the Optional Balanced Input Module Installed, So in
the event you want to feed the Amplifier with a Balanced Input Signal,
from a Preamp or Mixer you can. Or your can just feed it with a Standard
Un-Balanced Signal Bypassing the Module...It also has a Built in Cooling
Fan, complete with Filter to keep Dust out...But it runs Cool Even at
Power Levels that would fill an Auditorium....If your familiar with
Crown International, Their Name has been Synonymous with High Quality,
and High Reliability, for the Past 50 Years....I really would rather
keep it than sell it...but since I've moved back into a smaller
apartment...I have no room...I've already sold all my other Stereo Gear.
The Amplifier is Ideal for a Super Home System, Commercial Sound System,
such as a School or Church, Perfect for those who Perform Disc Jockey
workï¿½
*Balanced Input Module has complete Adjustments for Compression ,
High and Low Filters, AGC Automatic Gain Control Threshold Adjustment,
Test Tone Signal Generator 50Hz to 20KHz. Extremely useful for System
Troubleshooting..
I paid $2300 New...I'm asking $1200 Firm, in Original Box, You Pay
Shipping

2110. FT-847 Observations

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-20 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <6hg4td$r5r$2@geraldo.cc.utexas.edu>
Source record: 146500

Greetings all-
Excuse me, but this will be longer than a normal post....

Well, I have it! Sold off half the station this weekend to get it-
I will start to make some observational comments on the unit as
I get time to use it.

First impressions:
Well built and thought out. it is a 4 out of 5 in user friendlyness.
The manual is supurb. It comes with a quick reference chart for
the menus, a large world callsign map, and block diagram chart.
You'd swear it was written by a native english speaker.
Buttons are the new rubber kind with the letters stenciled on them..
not to hot for extended use. The main tuning knob is small in
diameter and cannot be used with your finger to rotate it (although)
it has the finger indentation. The shuttle tuning is very usable.
Display is large and clear and a nice blue color.
Receive sounds very good right off the bat. It sounds very "present"
as if the coupling between stages (gain distribution) was executed
well.....with exception of the Audio amp. It is overdriven. How this
shows itself is that the lowest volume setting (which pops on-digital
volume control)is too loud for 4am "sleepless night" operations if
your shack is near the bedroom (headphone time). This can be fixed...and
I'll make a mod for it if Yaesu does not. Also, the audio amp does not
have any detectable hiss...like say Icom products do. Very Clean.
TX:- first SSB audio reports came back..."too much bass". After adjusting
the menu for TX tone shift...to the limit...it sounded much better. The hand
mike is made in China and has a "tone" switch on it which is not referenced
in the manual and seems to do nothing.
RX again...FM sounds fine...normal in all respects. AM SW sounds very good.
The narrow filter being too narrow (as is usual these days) The SSB sounds
narrow and punchy. If you have real good ears, you can handle it fine,
but If you have less than perfect ears (like mine) the narrowness can
induce listening fatigue pretty quick. RX SSB Audio is rolled off below
400 hz, so there is no lower end coming out the speaker...and I like
lower end on SSB (mod time also).
INTERESTING: this morning, I noticed that there are no crystal filters
in this radio. Because there is no 10.7 or 9mhz IF - Those positions
are not available for a filter...and as shipped, the little ceramic
filters in the 455khz IF do all the filtering. The result is that you
can hear a little high pitched "crud" coming through in tight situations.
This adds to the listening fatigue. Good thing is that there are actually
Two Collins filter positions on the board (really 3) A 500 hz position, and
two positions for SSB...TX and RX. This is required for the rig to do duplex.
MY question is...Does inserting the Collins filter bypass the ceramic one?

I sure hope so...cuz the loss through both filters will not be a good thing.
(mod time!) The AM ceramic filter is the Murata CFW-455G 8khz. Personally,
I prefer a 6khz filter there to help on 6mhz SW at night. I just looked,
and it seems that this filter in no way affects the FM TX chain...good-
It can be changed.
AMAZING!- This is interesting...the DSP can be used on AM and FM. I just
checked...it is straight Audio DSP. In AM, it is actually useable in one
instance. With close spaced AM SW stations, the the normal filter is too wide,
narrow AM position is too narrow, but kicking in the DSP bandwidth filter
with maximum width...and it sounds great. It must be about 3.2khz maximal
bandpass.
DSP:- Works well...I give it a 85 out of 100. I have used several and own
the Timewave 599ZX. The NR mode is adjustable from the menu...and is pretty
good. It is better than the Timewave NR mode and not as good as say a IC-756's.

I'll leave it here for the time being...and will entertain any questions.

73's

Bob Nagy

2112. Furure of JRC JST-245

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-20 00:00:00 UTC
From: Harry Reed <doon@therd.com>
Message-ID: <6hg73g$2iv$1@nw001t.infi.net>
Source record: 146502

Hi, All!
I'm contemplating the purchase of a JRC JST-245 transceiver and I have a couple
of questions....

0) What are people's overall impression of the rig?
What about the JST-145?

1) I'm thinking of also purchasing the JRC NRD-545 receiver for use with the 245. Is it
possible to connect the 2 together to so that they share VFO's, receive muting, etc?

2) When is the 245 expected to be replaced? as it is already going on 4-years old.
Does anybody know when JRC is going to introduce a followup to the 245? (I would
hate to spend $2400 on the thing only to have it's replacement come out in a year!)

Any other info and comments would be appreciated.

For Sale:

Kenwood TS-940Sat 160-10 meter SSB/CW/AM/FM transceiver $800
Nonsmoker, appearance condition 9 on scale 1-10
Phase noise mods added
Geihl Chip (makes each memory ch into seperate VFOs)
Serial #: 5120073 (I'm the 2nd owner after 8 yrs)
Internal 120/240 VAC 50/60Hz power supply
Built-in antenna tuner
User and shop manuals + original box
Kenwood SM-220 scope $300
BS8 pan adapter (not sold separate from SM-220)
User manual
Kenwood 6 Khz AM filter $50
Kenwood 250 Hz CW filter $50
Kenwood IF-10b with IF-232 computer interface $100
User/Programmers manual
==========

Total items: $ 1300

However "your" package cost (everything listed above): $ 1150

If you purchase everything listed above as a "total" package, your total cost will only be: $1150, + UPS shipping (~$20)

However, if you purchase only the TS-940Sat by itself, or with just one or two of the above listed accessories, all the above listed cost apply, "no cost break" and "you" also pay the shipping cost, approximately $10-20, depending upon items purchased.

NOTE: None of the accessories will be sold separately until "AFTER" the transceiver is sold first. The person who purchases the TS-940Sat gets "first" choice on what configuration package items he/she wants. After the TS-940Sat is sold, then I will list the remainder of the accessories, if any, on the rec.radio.swap Newsgroup.

No trades, bartering or price negotiations.

Purchase process: Send your check or money order directly to my FCC callsign callbook or www.QRZ.com database US mailing address. Once received and your check clears my bank, I will ship UPS ground that day. I will include insurance for $1000.

If you want additional insurance, include an additional $5 dollars.

If you want over night or air shipping 48 states, include an additional $20.

If you want overseas shipping, add an additional $60.

Crown Amplifier
Date:
Fri, 20 Feb 1998 10:47:20 -0500
From:
CARL DOMANICO <cmd-dell@worldnet.att.net>

For Sale: Crown International PSA-2X Professional Self-Analyzing
Stereo/Mono Power Amplifier....

If your looking for a Super-Powerfull,Highly Reliable, Amplifier you
came to the right place.....It's a Cream Puff, Mint Condition, I'm the
Original Owner. It's very Powerful, Rated at: 275 Watts RMS Per Channel
into 8 Ohms...460 Watts RMS Per Channel into 4 Ohms...700 Watts RMS Per
Channel into 2 Ohms. These are very conservative Ratings...more like
335 at 8 Ohms.... 640 at 4 ohms 840 at 2 Ohms...Per Channelï¿½.
It Weighs 57lbs/W Rack Handles. Dimensions: Height 7" Width 19" Depth 17
1/2"..*..I also have the Optional Balanced Input Module Installed, So in
the event you want to feed the Amplifier with a Balanced Input Signal,
from a Preamp or Mixer you can. Or your can just feed it with a Standard
Un-Balanced Signal Bypassing the Module...It also has a Built in Cooling
Fan, complete with Filter to keep Dust out...But it runs Cool Even at
Power Levels that would fill an Auditorium....If your familiar with
Crown International, Their Name has been Synonymous with High Quality,
and High Reliability, for the Past 50 Years....I really would rather
keep it than sell it...but since I've moved back into a smaller
apartment...I have no room...I've already sold all my other Stereo Gear.
The Amplifier is Ideal for a Super Home System, Commercial Sound System,
such as a School or Church, Perfect for those who Perform Disc Jockey
workï¿½
*Balanced Input Module has complete Adjustments for Compression ,
High and Low Filters, AGC Automatic Gain Control Threshold Adjustment,
Test Tone Signal Generator 50Hz to 20KHz. Extremely useful for System
Troubleshooting..
I paid $2300 New...I'm asking $1200 Firm, in Original Box, You Pay
Shipping

I reply:
You put a jumper wire across two test pins in the front panel of the
radio and turn the radio on pressing the LOCK and FUNC keys together.
I can't recall exactly which jumper at this point. I did the mod 3
years ago. You should be able to find the mod on
oak.oakland.edu.

Evan,
Drake has the necessary parts and schematic so that you can make
the 1548 cable. It sells for about $7.00. The 1544 is another story.

There was a fellow from Chicago who advertised a 1544 here a couple
of weeks ago for $100.00. I just paid $125.00 for one from a guy in
Minneapolis and I was glad I found it!

I've had considerable higher amount of interesting QSO's, several QSO's
with LA7MI or LA6VM on 80/40m ssb lasted over 5 hours, I might even had
many interesting 2m FM QSO's, even some on repeaters!!!

>Conversation is a two-way street. If you have nothing to offer, chances are
>you will get nothing in return. It's that simple.

it is perhaps not too difficult to find somebody to make an interesting
conversation with, the problem is all the breakers (read: Intruders),
interrupting an interesting conversation without having anything to add
to the discussion. I usually overhear intruders, but unfortunately the
opposite stns does not.

Still remember a G-stn I worked on 144320 some 20 years ago, we had so
much to talk about, but so many angry stns waiting to work to LA

Top of the line Yaesu FT-1000 H Transceiver. Late serial # 5D430099. AES selling 5G or H. It is flawless and looks and operates as new. Equipped with Optional BPF-1 Bandpass Filter Module to tune the sug-receiver independently of the main receiver. Also the Optional XF-C 2.4 kHz 3rd IF filter, the XF-D 2.0 kHz 3rd if filter plus 8 other IF filters from 250 Hz to 2.4 kHz. Also included is the SP-5 Speaker w/filters (6 weeks old) and the Timewave DSP-59Y (4 weeks old) installed in the cabinet. I have the hand mic, owners manual, service manual and boxes. I want $2850.00 and will consider trades. This equipment is like new and any trades must be likewise.

Trades considered: Icom IC-728 Yaesu FT-900
Icom IC-751A Yaesu
FT-920 (late ser. #)
Icom IC-756 (ser # above 2000) Yaesu FT-990
AC/DC

And there are probably others.

2132. Kenwood Microphone Extension Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-20 00:00:00 UTC
From: Steve Weaver <StevenCW@ANTISPAM.aliens.com>
Message-ID: <01bd6c04$529e0a80$a852bec7@home>
Source record: 146543

Was just wondering if anybody else has had the same problem... or maybe just offer food for thought for people...

A friend of mine just bought the Kenwood V7A (I think) and bought the remote head unit for it. When he tried plugging in the extension for the microphone, the unit would begin to transmit without pressing the key. When I tried it on an HTX-212, it caused the unit to blank out.

Solution... After checking all connections on the cable, it was discovered that the cable they had sent was in fact reverse wired... Pin 1 to Pin 8, Pin 2 to Pin 7, etc... We rewired the unit and it is working great.

Now we had the smarts to figure that out and fix it without sending it back to Kenwood. How many others did the same thing? Are they sending out tons of miswired cables or what?

Steve

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. These bulbs draw apprx. 60ma. at 12 volts. I found
these at Dayton one year and bought up all the guy had. Lot of 12
grain of wheat bulbs $10 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

From: Jordan Arndt <jordana@nucleus.com>
Subject: RE JORDAN ARNDT VE6SWL My side of the Story...

Have you been contacted by a burro@panama.gulf.net or
something to that effect??? Let me know... he's telling a lot of ugly
stories and I'm gonna set things straight ... we agreed to swap a 1278B
for a tuner or 100.00 US cash he originally was asking 125.00 Shipped..
I said fine and before you know it it's shipped and on it's way here...
he would e-mail me DAILY and soemtimes twice a day as it took 3 1/2
weeks to get here which was the 8th of April... I sent him a M.O.for
125.00 US... and he hasn't gotten it yet, like 10 days later... so he
starts shooting his
mouth off ALL OVER that I ripped him off for 500.00$$$ Now given that it
took 3 1/2 weeks for the iem to arrive how does he expect the M.O. to
arrive in a week when our P.Office had 5 days off at Easter??? So i said
fine I'll send it back to you ... he said no there's no telling what you
might have done to it... P.S. I have no way of knowing if he has rcvd it
and won't know for a moanth after it has been cashed... also the reason
I didn't send the tuner was that it was going to cost 60.00 CDN to ship
it...so there's the story... 73 de Jordan VE2SWL/VE6 >>

If you have the receipt, Why don't you fax it to him for proof, and don't
worry about it
I don't think a fax will take 3 weeks to get there. or post it on the
Internet?

From: epir@silk.net
Message-ID: <353acc16.0@news.westel.com>
Source record: 146551

Hi! Could someone help me with my noise problem?
I have a DRAKE TR-4 transceiver with no noise blanker.
Is there someone who would have a noise blanker or a
schematic that I could build one,if yes please help me.
Thanks......73

Sorry if I'm asking a stupid question but....
Wayne Green, I know of him from the good ole days as editor (creator)
of 80 MICRO, the old TRS-80 magazine when the Radio Shack computer was
at its zenith. (Showing my age I guess)
My memory recalls that he was indeed involved in other publications
(radio, etc..) but I am new to the "scanner" groups having just
recently purchased my first scanner. (Relm HS200 and dont know why I
waited all these years. Been having a great time with it.)
But my question is this:
Your statement,
"Sure glad you told me...Now I can be sure not to listen to his
heartbraking crap", has my curiosity up.
What "heartbreaking crap" has happened to Mr. Green?

Best regards,
Gary Robinson

P.S. If you reply by email, remove "@cleanspam" from the my email
address.

: I own a 756. Its an "ok" radio and not worth more then the $1900
: I paid for it. My best guess is Icom goofed! They sold the 756
: for the correct right price, $1900, trying to capture that market place.
[snip]

Either way the radio is a very good one. I've used WJ, Collins etc and
the 756 is a good radio. Has a few operator quirks but basically a good
sound radio. Another ham withing 1-1/2 miles running a KW doesn't bother
me if I'm more that 5 or 8 Khz away, NB NR both work excellent etc.

$1990 is a fair price for the radio.

Hi name is Rich and i am In NY.

Anyone familiar with an old KLM (before they became Mirage and now MFJUNK!) amp model PA 15-160 BL?

I am trying to revive this baby and I need to know the value of some resistors that are burned beyond recognition in the sniffer circuit area.

Thanks for reading.

> other radios?
>

Well, the DSP assisted jobs sound very, very impressive under mildly difficult conditions, but don't do so well under very difficult conditions. The problem is that available analogue to digital converters are still not close to the dynamic range achievable by purely analogue techniques.

The TS870 relies on its DSP and illustrates this point, the IC775 can be loaded with a normal set of xtal filters which protect the ADC from out-of-channel signals to get good performance, but it amounts to a IC765 with the ability to do extra tricks when conditions are not too demanding.

I think that it may yet be a while before the switch to DSP produces a receiver that can equal the last of the analogue ones under *all* conditions. Your budget would buy a good IC765 or FT1000 second-hand that would represent a worthwhile improvement on your 440, subsequent depreciation would be less, and would allow you to wait for the wonders which will eventually happen when ADC technology makes up the gap.

Cheers
David

2149. computer interference

Hi guys,
I always keep my computer on when I use my radios.
Last day I switched it off, oh boys the FT1000MP
became so silent, receiving weak signal was very pleasant.
As keeping a computer on in the shack is now
really necessary (logging, packet cluster, gray line,
DX info ecc.) how did you solve this problem?
I already tried disconnecting everything (monitor,
printer, loudspeakers) without obtaining satisfactory results.
I want now filter the power supply with some toroid chores.
Any hints?
I was thinking of connecting a dumb terminal and putting
the computer in another room far away of the shack.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $200

. Swan 350 Transceiver with Power supply 80-10 meters also have Mobile PS and Phone patch. Looks good works well. $225.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $225

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

. Sams CB Photofacts. Volums as follow: 3 4 5 7 8 9 11 14 17 19 20 22 24 25 28 39 50 54 57. $5.00 each or $80 for the Lot.

2151. IC-290H schematic needed

I am looking for an adapter cable to allow me to use round 8 pin connecter mikes with my FT-900 which has a 8 conductor modular jack. I was told Yaseu makes an adapter cable, CT-26, which is supposed to do this. I can't find anyone to confirm this, some say they know it is an adapter, but don't know which way it adapts. eg 8 pin male to 8 modular male, or 8 pin female to ....

Anyone have one of these and can tell me if this is the cable I want before I buy one ?

Thanks Eric N8IX

My IC-756 has done that a few times, Only have owned it a month now.

But has anyone picked up on the bigger problem??
Unplug your mic, Turn your comp on, and look at your tx scope display.

This by far is a bigger problem that i hear no one talking about.
There seems to be a noise there. It is there with out the comp on but
the comp makes it more apparent.

Icom should fix this. This is sloppy work to let this problem go in my
opinion.

Paul

My display has always come on however it is somewhat dim at first.
According to the manual, this is normal for an LCD screen.

2164. HT Antennas with SMA Connector

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-21 00:00:00 UTC
From: benhan@nospam.monmouth.com
Message-ID: <353d0f03.31625243@news.monmouth.com>
Source record: 146322

I've been using a Diamond SRH-519 on my FT-50R for over a year and I think it's a great antenna.

I recently heard that Diamond came out with a newer antenna called the SRH-815. Does anyone own one? Has anyone actually compared it with the SRH-519 or Comet SMA-503?

The main differences between the SRH-815 and the SRH-519 and SMA-503 is that the SRH-815 is a tri-band and has a shorter whip (over length is 6" versus 8.3").

Also, has anyone compared the Comet SMA-501 with the Diamond SRH-805? The SMA-501 is dual band and the SRH-805 is tri-band for receiving. I know they look very similar and have perform comparably (basically dummy loads), but I was thinking of getting one for short range stuff. Any recommendations? If I were to judge purely from a cosmetic standpoint, I think I would go with the Diamond.

Thanks.

Ben

Greetings all-
I will continue with my observations in smaller posts.

This one will be mostly on the 847's DSP.

Because it is totally in the audio section, it has some advantages
and some dis-advantages. The big adantage is that the design lets
you turn it on in the AM and FM modes. I already said how this
helps in the AM mode by offering a narrow filtering that is
actually usable. Here are some other observations.--
In SSB, the NR DSP does not "recover". Many of you with DSP units
know that the DSP NR modes sort of act like a "noise gate"...but here
it shapes the bandpass filter around the incoming signal...which lets the
desired audio through, and filters out the noise. In the 847's
NR mode, it is totally quiet when first turned on, the signal starts
to come through..the filter conforms to the signal, but it does not
become a "no-pass" filter when there is no audio there. The voice
signal opens up the bandpass but the resulting overall backround
hiss reduction is not too great...because it remains open (still
conforming to the signal) when the voice stops. On CW it works
quite a bit better.
#2: On CW- you cannot use the NR and the bandpass together. You are
allowed to, but it creates a distortion which is NG. You don't
really need the NR along with the bandpass...so this is not a problem,
just an afectation.
#3 The Notch filter is the best I've tried. I've used all the Timewave
products, the IC-756's DSP, and the IC-775. It removes the tone in
about 3 seconds, and there is NO degradation of the audio. Its GOOD.
#4 My observation is that the DSP processing is fast...the processor
must be running fast. On the IC-756, the CW narrow peaking DSP filter
will start to roll off the edges on <=160 hz settings. This DSP
passes the sharp edges down to 100hz. Well done indeed.

Other general observations are that the SSB RX sounds very good.
YOu can roll back the RF gain and get that noiseless RX like on a
really good HF radio. You must use an external speaker...but the
results are impressive. On the down side, you will be ordering the
Collins mechanical SSB filter pronto because the Ceramic SSB filter
will pass anything over S9 which is co-channel to you. Not nice.
What did you expect?...FT-990 performance?..Not hardly.
And lastly, even in the narrow mode, the IF shift does not work in AM.
No big deal there. I will be spec'ing the 6khz ceramic filter for the
AM normal position. That will make it really usable.

OK..enough for today!

This is a common problem. You can order the bulbs from most big ham stores or from Vertex/Yeasu direct. If you don't know how to solder VERY small components, let someone who does do it. The bulbs use very small wire that will break easy. You may need to redrill the hole in the board if you don't have a desolderer. I have done at least five of these radios and each time say that is the last one.

I have to agree with the other postings about the TM V7A.
I purchased mine after Kenwood said that they had modified the display to
improve it in direct sunlight.
I don't know what Kenwood did, but the display is still a piece of junk.
I put a negative posting about the TM-V7A on this news group 6 months ago and
some guy responded
and had nothing but great things to say about HIS TM-V7A. He probably works
for Kenwood.
The display on this radio has got to be the worse one that Kenwood has ever put
on a radio. I don't know what they were thinking.
I have tried to adjust it every way that it can be adjusted and it still only
looks good in the dark.
The radio itself, (not including the Display) is a good little radio.It has
plenty of neat fetures and has a good RX and TX.
I contacted Kenwood and told them about the problem that I was having with my
radio and they basically said, " TOO BAD".
I WILL NEVER BUY A KENWOOD RADIO AGAIN. And I have bought alot. I have a
Kenwood TS870, TS850, TM255A, TM241, TL922, and on and on and on.
Kenwood has lost a loyal customer by not standing by the radios that they are
selling.

Hello!
I have seen the rig personaly at Milwaukee's AES at the
Superfest. Sure is small! The one I looked at and held was heavy and
seemed to be working although there was a dummy radio next to it. The
CASE? (covers) seemed to be made of a dense plastic and I would guess
if it were to be scratched or gouged it would not show to badly. The
feel of the knobs was good and had a tight feel to them The display was
small but good enough to read easily. The only bad thing I could see was
the poor S/RF meter. It was made up of about 8 to 10 single LEDs and
seemed to be set into the front panel too far as when I looked off
center it disappeared. The size was somewhat smaller than a HR2510 but
at least twice as heavy. The example I had seen was to me somewhat of a
pre-production prototype. But I am not am engineer.
To me it is very much a portable or moble rig and should fit
that bill nicely. Sad to say I did not ask any questions about the rig
but there were many looking it over. One other thing was that Yaesu's
new rig was right across the aisle so it was a very busy spot!

My plan for similar circumstances:

1) Make dipoles (for each band) from stainless steel fishing leader line.(it's lightweight, thin and strong.)

2) Feed with RG58A/U to a Budwig center connector, hang the main antenna by the longest dipole using lightweight nylon line. Use alligator clips to clip whatever other dipoles I intend to use at any particular session to the Budwig center connector, hanging the ends wherever, likely as inverted Vees.

3) Use a transmatch.

4) Test the system at home on-the-air before taking it out for actual use.

I have seen it written that stainless steel is something less than a good conductor for antenna use, but I have fed my three-cable SS tower guy set for many years as a broadband 75/80 meter dipole, running 100 watts most of the time, and I can't detect any operational loss. It has to be minimal.

Dan,

It is really inadvisable to power a rig off a lighter socket, except as a temporary fix. Issues are current level (at 100 watts, you will draw 20 amps or so), voltage drop, noise (long path to the battery), lack of fusing at the battery, etc.

Best is to run HEAVY gauge wire thru the firewall and connect direct to the battery, with appropriate fuses at the battery (both leads).

If you MUST operate off a lighter socket, keep the power level low (e.g., 50 watts or less).

Phil

Body handling: HTML body converted to readable text

Most hams will probably advise against it. However I have been running my TS50 for several years from the cigarette lighter in my 95 Taurus. Since it is fused at 15 amps I always run 50 watts. That and my trunk lip mount Hamstick makes a hole free installation.

You need to get the manual, or you're likely to just do further damage.
Oscilloscope front ends are not subject to repair by shotgunning, or use
of any other firearm. :) Contact Ed Matsuda at the address below; he'll
probably have one.

I'd say you were unlucky, I've been licensed since 1965, built many pieces of
equipment, synthesized multiband transceivers, test equipment like a spectrum
analyser module and the like. I never owned a commercial rig until 1992 when I
saw them at a price Stateside that was hard to pass up on.
Over the years I've had skeds with many parts of the world, seen a few of those
I worked when on my travels. I even had a good long chat with the skipper of a
Varig 737 flying between the Capital of Amazonas State and Recife. It depends on
what interests you have, I enjoy chats on general things, airplanes (sexiest
things on 3 legs), radio and lots more, I shun the computer chats except with
people I know, the ones who will go on about how wonderful Windoze XX is and
it's outstanding packet software, poor blokes salivating over Microdro$$
operating systems.
Anyway, got a CT-2 to fix and get packet back on the air and if it stops
raining, get drilling a wall to pur that 2m antenna up above the roof.
One day soon I hope we can make the jump to 56K packet and shift some real
stuff, we keep moving an inch at a time modifying ex-PMR stuff, but think we
need to build from scratch.
Regards

Last I heard the set had not yet received final FCC approval and sale had
been held up pending. Maybe they're waiting on that, and are meanwhile
shipping to countries that don't require it.

Absolutely not! Cigarette adapter is a terrible connection, it can't handle
20+ Amps. It will almost certainly experience overheating, and voltage drop
over the connection, therefore you wouldn't have full 100W of output power.
Not to mention safety issues...

Source record: 146366

I'd buy it again.
I know of 4 locally and not one has had any problem to put them out of action. 3 of them were bought within a year of the handheld being released.
My one has had very heavy usage - I walk to work and it is used for QSO's during that period, sits on my lab desk switched on for, say, 3 hours at the most a day and until I got a mobile rig sorted out, it was used in the car running 5 watts. Therefore it has been nicely heated up (!) but still keeps working.
Supplied antenna is really poor, (aren't they all these days?) but I found another one in my local dealers which was much much better and is within 5mm of the length of the original one.

To the best of my knowledge, the only 'known' problem with it is that the flex foil which connects to the dot matrix display on early models, can from time to time, have a high resistance contact and result in the contrast of the display being reduced. I have had this occasionally on mine, but it clears itself quickly and has never been bad enough to get it repaired.

There are no service bulletins for it on the Kenwood (USA) web site (unlike all sorts of other Kenwood gear of similar vintage).

One word of caution, a lot of telecom power supplies float battery banks and aren't designed to handle heavily modulated (varying at syllabic rates)loads. Others are designed to run banks of equipment without batteries, and experience a fairly steady load without appreciable speech modulation because their big load is really made of an awful lot of small ones, and their modulations don't correlate.

Powering a big class A/B power amp handling a single SSB or OOK Morse signal is a particularly interesting challenge for a switch-mode power supply design. A lot of available supplies could misbehave, and MRF154s are awfully expensive....

I have a problem that just started a couple of days ago.

For some reason, the radio will not turn on, OR, When I
hold the pwr button, the radio turns on and off very
quickly. The only way out of this is to reset the CPU
by holding down the up/dwn buttons at power up.

It's then OK for a while, and then poof it starts
all over again, by shutting off for no reason.

Has anyone else experienced this, and if so, whats
the solution ?

Thanks

The SGC-2020 radio is indeed not available. This has been confirmed.

Despite 3 months of Stephanie Deatrich and Jeff Halliburton at SGC telling me its in production... it is not.

While the web (http://www.sgcworld.com) page appears to indicate the radio is available... it is not

SGC seems to have a new redefined the term "in production".
I guess they are producing, and advertising them in QST but
but just not selling them to the public.

After reading the above I have to disagree I have my V7A in the car and it is
very easy to read and operate ...why not get the voice synth for it..I don't
have one yet but will be installing it shortly...My rig didn't come with the
backlit mic but it has one now so add the extras and you will find it very
easy to operate mobile ...try placing the rig in a different position in your
car ..use a remote kit ..or just go out and buy the new TM-G707a with the old
orange display..which i see has a recieve up to 534mhz sounds good.
As for general usage on the base it is by far the best FM rig I have ever
owned and would recommend the TM V7A to all hams.
Oh if you know where I can get the computer control program from this would be
great as I would love to try controling it via my pc on the bench and laptop
in the car.

cheers Brett ZL1OZ

Why is this drivel posted to the "boatanchors" discussion group?
What does it have to do with discussing classic tube-type gear?
Shouldn't this kind of thing be posted to the "policies" group?

Source record: 146384

I purchased one about a month ago and love it. I first purchased the GH-71 but found it was way too big and bulky. The only thing I preferred on the 71 vs the 79 is the nicely lit display and backlighting on the keypad. The 79 does not have backlighting on the keypad and very dim on the display. I love the 2 line dot matrix display and the menu's.

It seems to get out on the air just fine.

From: baack@maine.edu
Message-ID: <6hi8so$1t6k$1@sol.caps.maine.edu>
Source record: 146385

Hello all,
I am looking for a mod to REDUCE the Power out of the HTX-100
10M mobile radio down to say 100Mw?

I am aware of the common three mods:
Increase power to 35W
Expand coverage from 26.0 - 30.0 MHZ
Increase mic sensitivity

I am looking to use the HTX 100 as an IF rig for a
DEM 220MHz transverter however,
I need to get the RF drive down to less than a watt.

ANY ideas out there??

2228. Kenwood TM-741 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-21 00:00:00 UTC
From: darrell.earnshaw@sap-ag.de
Message-ID: <6hicup$o3c$1@nnrp1.dejanews.com>
Source record: 146386

Is there anyway to configure the Kenwood TM-741 to switch on automatically when power is applied? In other words, have the radio "remember" what state it was in before power was removed, and then come back in that state when power is reapplied.

(Currently, the radio is wired to the ignition circuit, so I switch off the engine, the radio goes off [naturally], however when I restart the car, the radio remains off until I manually turn it back on again.)

Thanks,

Darrell.
NR3Y/W6.

Hello,

I'm interested in using an old Motorola speaker from my junk-box, and am having trouble finding the description of the amplifier wiring. The speaker is stamped TLN1877A1 on the back, and the internal board is labelled TRN6775A1. The part that is strange is the number of wires used to hook the thing up. It has 7 coming out of the box, which is more than I thought were necessary (2 for power, 2 for audio, what are the last 3 for?)

If anyone has any information on these speakers, or tips on how to figure out the wiring, I would appreciate it. Thanks!

Hello there,

During an estate cleanout I've come across a pretty complete, but very dusty National "Sixty" receiver.

It's forsale for any reasonable offer. Very dusty but you deal with that. It appears to use front pannel preselector plugins, of which there are three with the unit and maybe more around.

The buyer should know what this receiver is about.... ie tubes and dust.

shipping will be a big pain in the pazoo, so I would ask for pickup in the Sacramento/SF Bay area unless you really got to have it.

The big test here is to tell you to only respond to the address below my name or your reply goes into the anti-spam bin.

I'll email you back with my phone number, etc and we can talk if your interested.

thanks

You are asking for trouble. The uPc runs all the time power is hooked up
and the spike from the ignition switch can cause failure. The radio
should power back up if it was on when power was removed. you may
already have problems...

I am looking for a used or new10 meter base antenna(vertical) or an 11 meter ant. that I can trim for 10. I'd like to have the A99. So, I have the following few items for sale or trade for an antenna.

1. Ramsey Electronics PA-10, 2 meter amp. I have the specs sheet that came with the amp and it worked well with an HT the last time I used it. 1-2 watts gets 25-35w out. 5 watts in does 40-55 w out. Pre-amp disabled. Good condition. $30 +ship.

2. Radio shack speaker mic in really good shape. Has clip on back. I don't use it anymore..no HT. $15 +ship.

3. Midland CB radio. 40ch in exellent cond w/mag mount antenna.
$35 +ship

2248. WTB: KPC-3 tnc for packet/aprs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-21 00:00:00 UTC
From: David <kb5ylg@gte.net>
Message-ID: <6hiqva$592$1@gte2.gte.net>
Source record: 146406

Let me know if you have a physically small tnc available with book. I
am wanting multimode if possible, but certainly packet/aprs capability.
Prefer KPC-3 but will consider other...not Baypac since there is no APRS
support....

Hello,

I believe there is a move underway to expand the role of local low
power broadcast stations. http://www.concentric.net/~Radiotv/ should
lead you to what little I have read. It could be a one man campiagn as
far as I know, haven't had time to study it all yet.

Message-ID: <el$DnvVb9GA.296@upnetnews03>
Source record: 146408

Alodine, as I know it, does not cause a gold color. It is a protective coating used on aluminum after caustic etch and chromate conversion. Any sheet metal manufacturer should have some tanks (commonly called "Brite Dip") and would probably let you hand dip your aluminum in it. I've done that at Waddle Manufacturing in Longmont, CO.

Here is a response I received concerning the availability of the SG-2020...
I received this response from SGC on 20 Apr 98

Thank you for your e-mail and interest in the SG-2020.

The SG-2020 is in full production and due to a very large backlog any new
orders are about 60 days delivery. We suggest that you contact your
favorite
electronics store and get on the waiting list right away.

Please let us know if we can answer any further questions for you.

Best regards,

From: toroids@aol.com
Message-ID: <1998042103404100.XAA16049@ladder03.news.aol.com>
Source record: 146456

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I was just given a Kenwood TH-215A handi-talkie - but all it came with was a dead battery pack... (where's the best place to buy replacement packs??)

So I need a copy of the manual - will gladly pay copying and postage expenses plus a little extra if someone can help me out here. Please e-mail me if you can help.

Also looking for accessories for the TH-215A - leather case, battery eliminator, etc. - e-mail me with what you have and how much you're asking.

Thanks,

-Marty KI0LO

"replaces?" how could a pseudo dual bander replace the TMV7? That
doesnt make any sense. Icom has a pseudo dual bander, but they didnt

replace the 2710 with it!

Jim
I own an IC-756 and had a problem where the screen would blank out when I would transmit. What I found the root cause of the problem to be was a poor antenna coax switch which I had in line. The SWR would go intermittently high at times during transmit, causing the IC-756 SWR perfect circuit to shut down the radio, thus blanking the screen. Once I resolved the SWR issue by replacing the coax switch, the screen blanking problem went away. I think Icom has done an excellent job here in the design of the IC-756 when it comes to the SWR circuit.

Now for some other circuits in the radio, I think Icom dropped the ball. ie: lack of vertical deflection gain for the spectrum scope on higher frequencies, and the lack of being able to store repeater offsets and PL tones into memory channels.

2279. Icom 737 and 737A Differences?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-22 00:00:00 UTC
From: cdorn@gpu.srv.ualberta.ca
Message-ID: <6hlhjsgpi1@pulp.ucs.ualberta.ca>
Source record: 146217

Hello,
I'm hoping that someone more familiar with these rigs can clarify the differences between them. I understand that the 737A added SSB VOX. Are there any other significant differences between the Icom 737 and 737A? According to the Icom service FAQs, the 737 used plastic VCO trimmers, where the 737A may have upgraded to ceramic trimmers. It seems that the 737A gets about $100 more on the used market. I am considering an original 737 for my shack. I have an Icom 706, but desire something larger for HF. Thanks for any assistance.

Source record: 146221
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap

Create 75 meter rotary dipole for sale. Model CD-78 is a
reduced scale dipole antenna with 2:1 SWR over about 50 Khz.
Overall element length is 56 feet and it weighs 26.5 pounds.

I had this antenna installed at 155 feet between my
40 and 20 meter beams. It worked very well and signal reports were
comparable to a full size dipole when the CD-78 was rotated broadside
to the incoming signal. This is an ideal antenna for someone that
needs a small size antenna but wants big performance on 75 meters.

Will sell for $450 or trade for other equipment.

Well, you could just crank the thing up and get
200W PEP easily out of the thing, I mean, it runs a pair
of 2SC2879s... which could do 200W easily. The only thing is
I do not know if the rig itself is designed to do this, how the PA
is designed, etc. Increasing the power output may also increase the

output garbage.... althought the 2879 has decent IMD for 100W
out.... but some PA redesign may be in order before you could
expect the rig to do that.

-Mike

PS: please mail me the the car knob modification.... this should
be interesting.

>
>73,
>
>Al W3DZI

Thats the only real "bad" thing about it. If you find a good place to mount the head of the radio, you can overcome that... and irregardless its not a problem when it is overcast or dark outside.

Other than that, the TMV7 has lots of features that the 8100 doesnt have, or requires extra $ for. One of those is direct frequency/memory entry from the mic. Never seen a rig with this before. I would definitely consider buying another one of these rigs. Also included is CTCSS decode.... which normally is like an $80 addon!

I don't know what everyones problem is with this radio. Most of the people that have complained about it should be using crystal operated sets. My radio isnt mounted optimally, and I only have a very few occaisions where the display becomes that much of a problem. Intermod is also present, but only in severely urbanized areas, but I havent found a radio that didnt get killed by intermod in boston.

Neither. Both of the rigs you mentioned haven't been on the market
for more than a year. This is the first criterion one should look at
when purchasing HF equipment. The other problem is there is no
QST review for either rig. Often times, the rig will undergo a few
revisions before QST ends up reviewing it. The units that come off
the line at the start, are almost never as good as the
ones they're producing a year from that point.

Why? This radio has no point, even on HF. It is overpriced for what
it does, I could take an FT1000D and slap a spectrum display unit on
the side and have a better radio.

Why bother. If you increased the power from 100 watts out to 400 watts out
you would gain one s unit. It is just not worth the effort. I don't why
these so-called mods come out. Even assuming the output transistors are
capable of the increased power (which I doubt) the power supply would
probably not be able to supply the necessary current. DON'T DO IT!!!!!

That's because you failed to ask the right questions - you failed to show the other operators you were interested in conversing with them. Did you ask about their military experience? Did you ask if they had any patents? Their profession? What books they'd recently read? Their thoughts regarding solar or steam power? Chess? Did you try to learn *anything* from and/or about the other fellows? Once you find the what the other person is interested in, you'll gain quite a bit of knowledge in an area that you possibly knew nothing about prior to the QSO.

Look for a speciality net to check into, such as the old Astro-Net which used to be on 3885 kc - amateur astronomers in their backyards all peering at the same celestial body through their telescopes (with a name like Moonman, you would have fit right in...). Call CQ CHESS to hook up with another chess player. Turn down your power to say, 1 W, and try for the Thousand Mile Per Watt award (or the 10,000 MPW award).

Geez, the list is endless. Your problem is that you have no imagination! It's no wonder your QSOs appeared so boring to you; I can imagine how the other fellow felt!

I think the noise you mention is similar to what many 751 and 751A XCVRs had. It was most noticable on XMIT when the processor was on. Could also be heard on RX under weak signal conditions. Irksome on an otherwise fine rig. I had the problem and was never able to clear it up. Eventually I went to a Yaesu 990 - very happy with it (too bad they stopped making them).

Sorry to hear this problem is being found on the 756.

Does anyone know how to change the dial lights inside of the large cylindrical band drum without disassembling the radio? Also would like to know the approx value of this unit which is serial #88-4525 made in 1966. It is in good condx. and operates well in all modes. Interested in possible sale or trade.
Thanks, Phil...KG6KB

Just one question. Since he didn't make the reserve price, but you sold
it to him anyway, did you send ebay their 2% commission?

2310. Re: 706 DSP Installation

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-22 00:00:00 UTC
From: Phil Wheeler <w7ox@ix.netcom.com>
Message-ID: <353EC90F.4CED4EA0@ix.netcom.com>
Source record: 146248

Follows the text of a recent msg I found useful when I installed my
706MkII DSP unit:

My post to the newsgroup that I had received the Icom UT-106 DSP Module
for
the Icom 706MII generated roughly 47 messages to my mail box in the last
to
days with lots of questions. I had not planned on installing the DSP
unit
until this weekend but I did so thursday evening. I will give a brief
overview of the installation of the module, and what observations I came
away with after 2, 30 minute sessions of listening to signals on 40
meters.
I am not a technical writer, so keep that in mind. I got numerous
requests
for first impressions and second most asked question was how hard was it
to
install. I don't have any experience with DSP, my home rig is a Kenwood
TS-850 so the only things I know about DSP is what I have read and heard
from other hams. I have few pre-concived ideas about DSP. So here we
go....

Installation

The unit comes with installation and operating instructions in the box
and a
photocopy of supplemental installation instructions, it shows better
pictures of the install. Installing the unit consists of removing both
the
top and bottom. Unplug the P1 cable from the top side of the radio, feed
it
along the side and pull it out on the bottom side of the radio. A small
white ribbon is feed thur the same opening from the top to bottom. To
get
the P1 cable through, it was easier to unplug the ribbon cable from the
top
side and feed it through to the bottom. The P1 cable you just feed
through
plugs into the J1 DSP unit, the cable that was already connected to the
DSP
when it was unpacked is feed through to the side to the top and
connected
to the J12.

Rehook the ribbon cable that was unhooked to get the cables along the side
and install the new short ribbon cable on the bottom side and put the covers
back on and your done. When you turn the radio on the functions are
available under the S4 display. The instructions are very clear.

Functions

The unit has two basic functions. ANF(Automatic Notch Filter) can be turned
on or off and is not adjustable It works in SSB, AM and FM. The NR(Noise
Reduction) function can be turned on or off and works in all modes. It also
has a level control NRL, this controls the noise reduction level from 0 -15.
When selected this level is controlled by turning the M-CH control. The DSP
is an audio stage dsp and not IF dsp.

Observations

Both nights I spent monitoring on 40meter LSB, noise levels were running S5
here and no optional filters were used.

ANF - The ANF was designed to attenuate beat tones, tuning signals and most
single pitched tones. Thats why it does not work in CW and RTTY modes.
Listening to QSO's and hearing someone close to the frequency tuning up in
almost everycase was eliminated totaly by switching on the ANF. I would say
90% of the single frequency tone type of interference were completely
removed and the rest suppressed greatly. Signals that studdered or
woodpeckered came through with little or no filtering.

NR - The NR was designed to reduce the amount of noise and pickout desired
signals buried in the noise. The NR function reduced the noise levels, on
strong signals(20 over 9 and up) the level could be turn up above level 10
and the noise was reduced to very low levels. The audio signals were also
reduce but not to has high a degree, meaning I then needed to turn up the
volume slightly. Not as good as FM but close. Moderately strong
signals(S6 - S9) benefit the most from the unit. As I increased the NR level
both noise and audio is attenuated, the noise at a greater rate. I now had

to increase the volume a fair amount more to be able to understand the conversation, but copy was still good and 50-60% of the noise was reduced.
Weak signals with or with DSP were still had to copy. I generally found that
if I couldn't copy the conversation thur the noise without NR, then with NR
was not going to either.

One oddity that I found while using the NR level was that increasing the noise reduction level sometimes the conversation would be readable lets say
at level 5, turn it to six and the copy would not be as good, increase the
level to 7 worse, then increase to 8 and it might get better. Did not happen all the time, not sure if the audio to noise ratio actually got better or was just a change in tone pitch? Need more time with it.

The operating instructions do say that if you turn the level up too high you
can cause signal masking and distrotion, and it does do that. Some weak signals I listened to I was able to make them disappear even at level 10.

Bottom line on my first impressions, is it a cure for coping weak signals
from the QRN? No.....I'd say the NR function made copyable signals much more
pleasant to listen to by removing much noise but I honestly can't say it helped pick weak signals out of the mud. I am sure it will increase the pleasure of my mobile operating experience by being able to cleanup many of
the signals. After I have used it for an extended period of time or use another radio with DSP, I am sure my opion will change to some degree. I
hope this was informative for those looking for a few answers.....

ICOM did mentioned in their IC756 manual about this, the display will
dim when
power up and go full brightness after a minute during cold weather.

My problem is the scree not come on (black out) for the first 5 to 10
seconds,
and the temperature was above 20 C.

Received the "fix" for this problem a few days ago. The "fix" is to remove
C86, a 47uF cap. located next to the coil L61 on the RF board. I did
locate and remove this cap, even though my service manual did no show it, and
my "delayed" audio dropped from about 30 seconds to 5 seconds... perfectly
acceptable for initial turn-on delay.

Alinco DJ-180 HT
5 w battery, the $60 200 channel memory upgrade, extendable antenna (Diamond RH-205), Alinco (set the radio and battery in it type recharger).

Radio has been Mars modified, but can disabled/re-enabled with a keystroke. Perminantly disabled by reconecting wire obviously disconnected wire internally.

130-173mhz tx and rx coverage.

Condition of the radio is good, and its very durable.. good sensitivity/receive.

The radio is very efficient, I can use it for one whole day without one recharge at 5 watts. Low power 1/2 watt.

Moving and can't find Manual, but simple to program, and if bought will send you the manual via snail mail when moved into new house.

all for $110.00 firm.

On demand have pics of the radio and charger, send E-mail too:

2321. Needl help with part for Tek 2213 scope

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-22 00:00:00 UTC
From: jimmiew@sprynet.com
Message-ID: <353d5204.23116745@news.sprynet.com>
Source record: 146271

I�m trying to fix a Tektronix 2213 scope I found at a hamfest. The front end of one channel is poofed (no vertical deflection). Since I don�t have a schematic, I�m taking the shotgun approach of replacing all the semiconductors for that channel. I�ve identified and found sources for all but one. I would appreciate any help with identifying this part or getting a schematic.

It is a transistor or FET TO-92 package. The devices on both channels have already been replaced before I got it. The replacements are from different manufacturers and the only common part of the marking is �1124�. The silkscreen marking on the board is Q112 for one channel and Q222 for the other.

I tried Tektronix and they told me parts and service manuals are no longer available. This is a nice little scope and I�d like to get both channels working. Thanks in advance for any help.

Source record: 146282

I have a HTX-100 up for sale. This radio is like new, it has one small mark from a mic hanger and compressed paint from the bracket. It has been broadbanded but that is all that has been done internally. Radio has less than ten hours on it. Will come just as it was bought from RS,in original box with all hardware. $150.00 US plus shipping.

I've seen one flaw in the TH79E, which is very easy to fix. After some
time, the transmit frequency on 440 is too high. After adjusting with
a frequencycounter the problem was solved.

Furthermore, I like it very much. It has some nice features (the
E-version has 800-999 receive including cellular and has crossband
repeat. Too bad there isn't a CTCSS decoder included).

> this outlet? Are there adapters available?

I would not recommend it if the lighter is on a fused circuit. You might want
to check the specs for the vehicle, and see if it is fused. Also, you will
want to check the gauge of wire for the lighter, and mabee run I direct line
to the battery. Putting a heavy strain on the Altenator can blow it.

The 706 will pull 20 amps no problem, we don't want to start any fires !

Well the reports from satisfied users overseas are not pouring in to this
news group.

Recently when the Yaesu 847 was released reports poured into this
newsgroup from around the world detailing which dealers were getting
deliveries and how the radios were. No such indicators are happening here.

The wall of BS and misinformation by vendors has been lifted by Internet.

Hi,
I have a Icom 27-H that is working fine, EXCEPT the LED display. I am unsure if the problem is in the display or the chip that drives it, however if you have an old IC-27, 37A, or 47A (the LEDs are the same) that failed for some other reason that it sitting around in you way, just taking up space, and otherwise annoying you (or your YF), this could be your OPPORTUNITY OF A LIFETIME, YOU may HAVE ALREADY WON!!! (Oops, forget that part about winning, I just got carried away, you didn't win anything, and I am sorry that I even brought it up.)
Nevertheless, perhaps we CAN help each other out by me sending a little money your way and you sending your junk my way. Plus, we can keep one radio out of the local landfill and HELP SAVE THE EARTH FOR OUR CHILDREN AND GRANDCHILDREN!! (Yea! That's the ticket. Yes it IS hyperbole, but in THIS case, it is at least TRUE hyperbole.) ;->

Thanks for reading this. Even if you have no interest, I hope you enjoyed my bs.

Best of Luck & 73,

Don W9DEW

Remember: this is a hobby, this is only a hobby, it is supposed to be fun, don't screw it up.

Source record: 146293

Rod <RODWALL@prodigy.net> wrote:

Well its all very exciting that a pre production prototype was available
for people to gawk at. AES has no SGC-2020s for sale.

- Then why cant they even produce one for a show? The production model
is supposed to be made of aluminum not plastic! Something stinks here.

Building a radio like this is not rocket science. It takes only one magic
ingrediant which I am guessing SGC may be having a problem with money.

Again there seems to be a strong effort by SGC to give the image the rig
exists (Since January). BUT THERE IS NO RADIO AVAILABLE! Try and get one.

Call them and they will tell you they are trying to clear up there
TREMENDOUS backlog AND they are shipping. They told my friend this
yesterday.

BUT ask them Who has the radio? Where can you buy one or who has sold
some? I dont get it. Why all the misinformation form SGC?

When you read this news group you can quickly see no one has
the radio. Not Europe or the USA.

Sounds like they are trying to raise funds to build the radio or
something.

>minimal.

If it were minimal, the antenna wouldn't be "broadbanded". The antenna
Q is being lowered by the loss resistance of the steel wire. That's about
17 times the skin resistance of copper. As Reg is fond of saying, you
may not notice an S unit or so difference under operational conditions.
But then you just might notice it too, depending on how marginal the
contact path is. Since antennas are reciprocal, you might not even be
hearing the ones that got away.

Most HF solid state radios can be used from 1.8 to 30 MHz if you know which diodes to cut. If you by a marine radio, you may not get as many features as you would with a ham radio. Because of the business I'm in I cannot endorse a brand.

I wonder if you might have RF in the shack problems? Have you changed antennas lately? Has your current antenna system SWR changed? I know when I have that problem my stuff does weird things like the display going off and turning itself off. Also my Astron supply kicks off for the same reason. (Usually because I have the antenna selection switch at the wrong position or forget to kick in the tuner ect.)

2355. FORSALE - Immaculate Kenwood TS-520, great starter rig

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-22 00:00:00 UTC
From: jpl@qpc1.ho.lucent.com
Message-ID: <6hl9h7$btj@nntpa.cb.lucent.com>
Source record: 146305
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale

I have a virtually immaculate Kenwoods TS-520 rig that I would like to sell.
This was my first "real radio and in my opintion is still
one of the best rigs around. It would make a fantastic beginner
station or a great backup rig.

I am only the second owner of the rig.
I purchased it from a collegue of mine at Bell Labs (who
was the original owner), and I have the orignal sales receipt,
boxes, and manual for it. Both he and I took
exceptionally good care of this rig. It has NEVER been in a smoking
environment and has NEVER been mobiled.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC.
It covers 80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option).

The price is $300 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

2357. Re: Problem with IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-22 00:00:00 UTC
From: interested party <nospam@fcc.gov>
Message-ID: <6hlbpa$eu6@bgtnsc02.worldnet.att.net>
Source record: 146307

I'll have to second the power supply voltage suggestion. My 706 started
turning off every now and then, and then one night wouldn't come on at all.
I checked my power supply, a two meter 50amp Astron, and found that the
voltage was down to about 10V. Turns out that when I had turned the power
supply on every now and then I brushed my hand over the voltage adjustment
knob just above the on/off switch and had moved it off the position that
would normally give about 13-1/2 volts. Try it if you have an adjustable
supply.

2362. Help: Antenna installation, Alameda County, CA, US

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-22 00:00:00 UTC
From: mmf1@ix.netcom.com
Message-ID: <6hldpl$h0q@dfw-ixnews5.ix.netcom.com>
Source record: 146312

Wanted: Help installing an antenna

Location: Alameda, near Oakland, CA, US

On top of a condominium building with a flat roof

I have finally gotten permission from the condo complex board of
directors to
install a short wave antenna. However I need to have someone who is
"licensed
or certifed" to install it. A licensed ham would be okay. You may be
asked
to show that you have liability insurance.

I have a disability and use a power wheelchair, so I wouldn't be able
to
install the antenna myself.

The antenna is a "hidden" antenna which fits over a roof vent and looks
just
like a roof vent.

Please send me an email if you think you can help.

Michael-

You only need the HTX-100 service manual. If I'm right, the part numbers listed are Uniden numbers, which should be available from their service department.

Are you sure the coils aren't available from Tandy? I've bought parts for some pretty old stuff before.

Wanting to Buy :

Hi, I bought a used Kenwood MC-60A Amplified Desk Microphone
Which I intend on using with my Kenwood TM-741A Triband Mobile Radio
144/220/440. However, it seems that I need a couple of other items made
by Kenwood
to make this work, the way I want it to. One item is the Kenwood MJ-88
Modular to 8 Pin Microphone Adapter. The other is a Kenwood MJ-89
Modular Microphone Switch. This allows Connection of Two Kenwood
Microphones, using Modular Plugs, to one Radio, with a Switch to select
either Microphone.

I would appreciate any and all input on this matter. If someone can give
me a method of buying lets say a Switch from Radio Shack with associated
parts needed to accomplish this without getting these items from
Kenwood, that would also be appreciatedï¿½.To buy just these connectors
and Switch new from AES or
Some Mail Order House..is Prohibitive based upon the cost of the
Microphoneï¿½.all help Appreciated !!

Thanks a Lot

Here's the latest from SGC re the 2020;

I had asked for info/users of the testing done on the 2020 as of this
date.... It's nice to see a quick response of questions.
I'm still waiting(and WOULD rather wait for a non-beta radio) and will
prob see the unit at Dayton.

REPLY follows:******************

Hi Tom,

Thanks for your interest in the new SG-2020. We just received a copy of
"Ham Radio Today" from the UK. They did a "Sneak Preview" of the 2020
when we sent an evaluation unit to a dealer in England. We didn't even
know they had done this until just now, however, it certainly is a very
positive review of the radio. They got some of their facts about our
company a little mixed up, but the rest of the article is very accurate.

This article will probably be posted at our website soon -- we are
requesting permission from the publisher now. The editor is Steve
Telenius-Lowe, G4JVG. If you can find a copy of that magazine, I think
you will enjoy the article. If you would like, I could fax you a copy
of this for you to refer to.

The SG-2020 has also been evaluated by Gordon West, WB6NOA. We don't
have a published report from him yet, however, he listed it as one of
the top 10 new products in one of the magazines he writes for.

It has also been tested and reviewed by Jerry Davis, KK6YO.

I hope this helps, Tom. As you can imagine, we have our hands full with
a sizeable backlog of orders that we are working hard to clear up. It's
a great rig, and I know you're going to like it. By the way, we will
have about 4 of them with us at Dayton -- powered up and on dummy loads.

Thanks, and stay in touch.

Sincerely,
Jeff Halliburton, WA7JH
Sales & Marketing Director

Greetings..

I have 95 Chevy Lumina Sedan that I need to install an Alinco DR-610 in. I have already mounted an on-glass Larson KG-2/70 with good results, but having trouble getting power and finding a place to mount the radio. I do have a 10 foot remoting cable to help, but the problem is that I have a console gear shift that takes away the usual under dash location that I use. I have thought of mounting the radio under the driver's seat and using the power seat power lead to get +12 VDC.

Anybody had experience with this type of install? Any of you professional 2 way guys got any tricks to installing radios in one of these 95 Lumina Sedans?

Please respond by e-mail or via the group.

73 es tnx for the help
de Randy WF5X

> E-mail Harv, WA2GEA at harbuss@global2000.net
I hate to tell you this OM but the price you are asking is out of line
for this amp by at least $150. These amps sell around $400 in excellent
condition. For $600 you can get much newer amps with two 3-500Zs from
companies that are still in biz. Dentron died many years ago. NO PARTS
AVAILABLE.
Best of luck to you though there are suckers born every minute. 73

The mic pinout for the Kenwood TM-221A radio is as follows:

Pin 1. Mic audio Hi.
Pin 2. PTT switch
Pin 3. Down (for remote tuning mics)
Pin 4. Up
Pin 5. + 8 volts DC 15mA max current source
Pin 6. Rx detector output 150mV/600 ohms
Pin 7. GND (microphone)
Pin 8. GND (PTT)

No, no, Gary...it was *designed* to be broadbanded, in accordance with a series of articles and information published in Ham Radio magazine in the early 80's. It uses 3 elements, one cut for center band, one cut 5% high, the third 5% low. The center and the 5% high are attached to the coax center conductor. According to published information, each element acts as the network for the other, broadbanding the entire antenna.(A 3-legged dipole? Tripole?) I use the tower guys because they are very convenient and work very well. When first installed , it had <2.5:1 SWR from 3.5 to 3.9 mc, rising fairly fast above 3.9 since I didn't shorten the dipole-intended dimensions enough to adequately compensate for the ground capacitance present in the more-like-an-inverted-vee configuration, and the bandpass shifted down about 100kc. Yeah, I know--a dummy load has low SWR, too, but sure doesn't radiate well - this antenna does.
I know that Stainless Steel has considerably higher resistance than copper or aluminum, but if you're assuming this to be an air-cooled dummy load you'd be bad wrong. I very rarely use more than 100 watts to work anyone I can hear, and I hear signals that others can't. Later I paralleled 160 meter and 40 meter dipoles (tinned stranded copper from the Wireman) at the feedpoint, and now I work all the low bands on a single feedline, and match any of those frequencies with either the auto tuner in the Icom, or the Drake MN2700 at high power. And all this wire loads fine on 30, 20 and 17 meters, also. The feedpoint is at 50 feet on my 60ft. tower, which also supports a twin sloper, another dipole on 80meters, tribander yagi and some other stuff. Birds avoid my property.

I hear them all and work everyone I hear--usually with 100 watts. I've worked UK on 75 meter SSB with 100 watts. Reg is right, and this is the problem with demanding *maximum output, throughput or efficiency* of everything and anything. You might as well build a single hi Q resonant antenna for each and every frequency that you operate, and be happy in your constraint. Most of the LOW-SWR freaks do just that, and won't settle for anything less that 1:1. Reminds me of the debate on the B&W Terminated folded dipole. They work quite well, on most frequencies. I've used them at work, in HF communications statewide. Clearly they are not "optimal" and on certain freqencies bound to be less than efficent, but it's even more clear that they are a serious, very useful antenna, incorporating very desirable flexibility..

The stainless steel fishing-leader antenna has been proven by campers and backpackers in field use already, running QRP. I'm sure there are additional ohmic losses involved, but I'm also sure the effects *are* minimal, depending of course on how one defines the term. Sometimes the less-efficient antenna/equipment/mode turns out to be the one of choice.

Hey, if it bothers you that much I'll silver plate the thing.

Source record: 146164

Installing the DSP unit is not too bad. There is a cable that runs from the bottom of the radio to the top that has to be removed,and plugged into the DSP,and then a cable from the DSP plugs in where it came out. The hardest part about installation was the routing of the 2 cables. It took prob. 20 minutes tops to install it.

The radio does not x-mit when you turn it on. Therefore the radio should
not be tripping for tx reasons ..etc.

The only thing I can think of perhaps static electricity.

I know someone posted the 847 mod recently, but it was incomplete.
I am going to use a veractor tripler on 450mhz to get 1.2ghz
input for the Phase IIID sat- and need to generate signal just outside
the 450 band to drive it.

Any help out there?

Thanks-
Bob

I am interested in measure yagi antenna performance, I made a yagi five elements for 425 Mhz, according qyagi4 program from WA7RAI, this antenna has 10.67 dB gain, but I want to measure if the gain is correct in real antenna. I have only this test equipment: 1 swr/power meter SW100B model of kenwood and obviusly portable (handies) radios ICOM and KENWOOD for UHF frecuency

Please, Do you want teach me how to make this work.

Sincerely

A. Arce A. (CP3JQ)

Wrong assumption, Brian. The Swap group is for buying, selling, and
swapping. This group is for exchanging technical information, opinions,
etc. NOT for buy/sell ads.

Ed, thanks for the reminder, although I suspect no one will heed it.

This radio was purchased in a ï¿½lotï¿½ of radios and I have no idea as to its history; the circuit boards and inside are pristine and I see no evidence of it ever being ï¿½workedï¿½ on. It is a ï¿½new generationï¿½ radio and would have to be set up with a programmer. No accessories with this radio. Its condition would rate a ï¿½9ï¿½.

$100.00 and I ship anywhere in the continental USA.

Please reply to: dazan@teleport.com

Phil nice article..and I would agree with your comments. I also have
isntalled the DSP module into my MKII and it took me about 20 minutes to
complete the installation. I would agree that you have outlined the
performance and the installation quite thoughly.
Anyone who has the TIME and pactience will not have any problems with

the installation. Once again nice job de WD8BMP

2435. Rohn HDBX tower any good?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-23 00:00:00 UTC
From: Clark Thompson <cmthomp1@facstaff.wisc.edu>
Message-ID: <353F95A7.E10BB7DE@facstaff.wisc.edu>
Source record: 146207

Greetings,

I was planning to buy a used Rohn HDBX-48 from a local ham. I plan to put a Cushcraft A3 on it, turned with a Tailtwister rotor. When trying to order new concrete anchors for it, the guy at Rohn said, "you know that tower is only for TV antennas." Apparently, in their about to be released catalog, they no longer market this tower to amateurs!

It's rated for 20 sq. ft. of wind load (the A3 is about 8). They do specify a max. boom length of 10 ft. and the A# is 14. This is where the problem lies, according to Rohn-- the tower can't take the twisting motion.

I know that lot of hams are using these with even bigger antennas. Is Rohn just afraid of law suits? My plans for errecting the tower are moving quickly... Would this be a mistake? Any other advice?

Thanks & 73,

Clark, KD9QI

P.S. AES no longer carrys Rohn!

I desperately need some info (schematic layout, manufacturer) about a Ham Radio 2m VHF linear amp: Brand=Bias Electronics (urbania, Italy), Model=VHF 160

It's a black metal box with cooling frame on top, One switch (middle position off, down=SSB, up=FM) on front right, and two red LED's on the left ("on" and "tx"). There a double side PCB inside that looks a bit "home-brew" (maybe it's a KIT???).

The amp is based on a MRF 245 that should be able to do 250 watts (absolute max). 160 watts (see model) will probably what it's supposed to give me. It's doing now only 50 watts and switching (the relais) and vox is not working properly. While it looks quite simple on the inside, I'd like to give it a go and let the thing do it's normal job (QRO!).

For Dutch HAM's: Ik heb 'm gekocht van PA3FRD (Friesland?) uit nalatenschap van PA3EQU (silent key) op de markt in Meppel 1997. Misschien is daar nog wat info te vinden?

CAN ANYONE HELP PSE? PSE EMAIL TO: PE1RVK@VRZA.ORG

Tnx very much de PE1RVK (JO21WT)

Source record: 146015
Cross-posted to: rec.radio.cb,rec.radio.amateur.equipment

Hello,

I have an old CB radio that I want to modify to 10 meters. The particulars on the radio are:

SBE Sidebander II
Type SBE-12CB/T
23 Channel, AM/USB/LSB
It has a clarifier, RF Gain, Squelch, and volume nob on it

If anyone can point me in the right direction on how to modify this radio, the information would be greatly appreciated. Please drop me an e-mail.

I just upgraded to my General Amateur Radio License and want to get this modified. I don't really care if the mod takes away the CB channels or not because CB is not used here in Alaska very much.

Thanks in advance,
Paul
Fairbanks, AK

I have an FT-77, I'm not sure whether it is the B version, but I can
give you some data about it:
Power: 100W (It also comes in a 10W version according to the manual)
Finals: 2*2SC2290
Bands: 3,5-30 MHz including 10-18-24,5 MHz
Mods: I suppose that bands can be moved, the LOsignal is made by a VCO
locked to a 5-5,5 MHz VFO offset by a crystal oscillator for each band.
If you change the crystal, the 500kHz segment will move, but you will
sacrifice an amateur band for it.

I used an Isotron-40 in my ground-floor apartment back in 1980 and
made a lot of contacts on it, including Iceland on 40m CW running
90 Watts output (from a Heath SB-401 transmitter).

Does anyone have a "quick reference sheet" for the TH-77A. I just got one, but no manual. I've ordered a manual from Kenwood, but I want to PLAY! An e-mail or fax copy would be optimal.

Thanks.

Tom,
I put my order back abt Sept... No, I have no info as to a real ship
date either, been waiting too!
Prob, you'll see it soon after Dayton.

But, I rather wait and get a radio that doesnt have to go back for a few
repairs/update (like some of the other companies) right after I get
it.

best
Tom

2474. No response Email

Source record: 146038

Just thought I would throw this into the general mix:

Over the past several weeks I have sent Emails to various amateur antenna and equipment manufacturers/dealers/resellers - always via a selection from their web-site (such as "click here to Email us). I was in the process of upgrading the entire shack and needed information.

Some manufacturers/dealers/resellers have been quick to reply with the information requested. Most, however, are very slow to respond - or do not respond at all. This includes not just small firms, but the big names also. I consider a slow response as anything over two business days.

Listen up manufacturers/dealers/resellers: If you encourage Email on your web-site, you should also respond to it. And, "we are just too busy" doesn't get it. If you can't take the time to talk with the customer before the product is purchased, what kind of after-sale service can be expected?

You are in business to sell your products to us. We, the customers, are not here to support you. Without us - you don't exist!

Needless to say, my purchases were all made from ONLY those that responded to my queries. ALL future purchases will follow the same rules.

> the 5% high are attached to the coax center conductor.

I erred slightly here. The two elements cut higher and lower are attatched to the same side of the feedline, the center cut element to the other. In reviewing one of the magazine presentations (Ham Radio Magazine, March 1984 page 54) the author cut the off-frequency elements to be :
.85 times, and 1.1 times thecenter freq length. Experimentation would seem to be encouraged. But this system DOES work well as a broadbanded 75/80 meter antenna, for those interested. Whatever the element material used.

More thoughts on using stainless steel as an antenna element.

Commercial antennas are commonly made of stainless steel to element lengths used on 27 mHz.(vertical elements, particularily mobile whips) without concern for the fact that the material has higher resistivity. Of course, on shorter antenna lengths, the total element resistance is not that great anyway, so the short lengths of stainless don't add significantly to total resistance.
It's worth noting here that the only reason that HF yagis are not constructed of stainless steel is weight considerations, not element resistance. You can be sure that if it was feasable weightwise and from a cost standpoint, someone would offer a line of very durable, weather resistant HF beams made of SSteel. Since aluminum alloys are pretty tough and far more attractive weightwise and costwise, I know of no stainless steel yagis or log periodics that are being built.
At lower HF frequencies antennas begin to be too long to be self supporting and are usually made of wire. Of course the added resistance of the longer elements becomes more of a consideration. At what point do you decide that the added loss of using Stainless Steel over copper is no longer worth the benefits of convenience, portability, durability, etc?
To determine this you either have to do the research and the math to get the exact I^2R cost of the higher resistance involved, or put it on the air and see for yourself in comparative testing, if the SSteel antenna is being affected operationally to the extent that you should abandon itsuse of in favor of copper elements.

Hi Dick, another way to broadband a dipole is by varying the length of the transmission line. I do not choose to backpack an antenna tuner. Instead of an antenna tuner, I backpack with 16ft, 8ft, 4ft, 2ft, 1ft lengths of plugable 300 ohm twinlead in addition to the regular length of 300 ohm twinlead feedline. By varying the length of the transmission line, the result is an SWR less than 1.5:1 over any entire band without the need for an antenna tuner. The antenna is super light and super efficient.

My 130ft dipole at the home QTH uses varying lengths of 450 ohm ladder-line to achieve SWRs of less than 1.6:1 on ALL HF ham frequencies with NO antenna tuner. Check it out at http://people.delphi.com/CecilMoore

Greetings all-
I have a question for you RX experts out there. Yaesu has been offering
Collins Mechanical filters for several of it's radios instead of
crystal filters..as is traditional. Personally, I am not as interested
in super deep skirts as I am in smooth natural sounding SSB audio.
Does the Collins filter provide decent skirts and a smoother sound...
ie. less ringing? Why have they gone to these mechanical filters?

Thanks-
Bob

No. But good guess. I have figured out the wiring after taking a
good look at the circuit board and getting a hint from a friend.
The wires are as follows:
Black, White, Shield = Ground
Red, Yellow = +V (12v seems to work for me)
Brown = Audio input
Green = Mute (apply +V to unmute speaker)

I commend the phone answering person for actually answering a simple question "are you shipping the 2020 to dealers yet?".

The answer was no. This is a big improvement to the somewhat misleading "we are working to fill backorders".

If I was not so eager for the radio and had not been told the radio was days away from being released SINCE January I dont think I would be posting here.

So my only question to SGC is WHEN WILL YOU SHIP ME A 2020?

Seems like a simple question for the SGC-Thinktank to answer after 4 months.

Bill
Absolutely correct! I suspect that some firms are not "ready" to
establish a web site, with proper follow up.

BTW the same applies to individual postings to NG's.
I feel it's EXTREMELY RUDE to not respond to those who
inquire to a posted ad. It's even more so when a general
response is made back to the NG ie "its sold" etc.
To whom-?? I've wanted to buy stuff and only needed a few
questions and and address to send the funds and never heard
back. Happened more than once.
Seems like a "buy my stuff but don't bother me if it get's sold"
Lousy attitude.
Mike

Hello Charles,

A battery would work fine, provided you take the necessary precautions when using a storage battery indoors - ventilation, protect the flooring from leaks and spills, etc. AND be sure to fuse both leads AT THE BATTERY.

You may see a decrease in output power when using the battery as the battery voltage will generally be 12 volts. The power supply, on the other hand, will be closer to 13.8 volts. This is a 15% difference and can have a significant impact on the output power of equipment designed for 13.8 volts. However, your HT may not be impacted by this as it probably is designed for a 4.8 to 12 volt supply voltage and uses some type of "regulated" DC power cable.

The VHF amplifier generally will not work at UHF. I would say that if you have a Mirage or similarVHF amp, it will not work at UHF for a couple reasons: The transistor(s) may not operate at UHF and the tuned circuits in the amp are designed for VHF and won't pass a UHF signal by design. You should read up a little on tuned circuits, amplifiers and the like so that you will better understand these concepts. They are a common thread in all aspects of radio. And you will find it very helpful to you down the road.

Good luck with your radio "career"!

Regards,

Bill

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

2504. ANOTHER COLLINS S-LINE COLOR MATCHING Tuner On E-Bay...

I used the Isotron 40 for about a year. I had it on a 20 foot pole. It works as well as my dipole at the same height. Now I have a dipole at 35 feet and the dipole slightly out-performs the Isotron. It's a good portable ant and I take it on car trips.

2506. Vernier for the TS830S ???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-24 00:00:00 UTC
From: n3bj@hotmail.com
Message-ID: <6hr9luntn1@nnrp1.dejanews.com>
Source record: 146070

Anyone ever come up with a suitable venier Main Tuning arrangement for the TS830S ? Especially with narrow CW filters, it is a bit quick...

Any ideas, please let me know.

Thanks,

Alan, N3BJ

2507. UT-106 My Views !!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-04-24 00:00:00 UTC
From: emarch@ais.net
Message-ID: <ua801.12$s65.699602@news.ais.net>
Source record: 146071

THE UT-106 First Impressions
Fri 04-24-98 05:10 pm

I was encouraged to buy the UT-106 DSP after reading KD0YD
post about it. Thanks Jeff!

I received my UT-106 from RT Systems (I paid $114.95 + 5.59shipping)
The DSP comes in a small box 2.25 x 3 x 1.25 inches with folded
instructions. The instructions are 8.5x11 4 printed pages
English for the 706 and PCR 1000 and the same in Japanese.
Also a suppliment sheet with B&W real pictures help show the
DSP mounting and cable pictures. Thanks Icom for the pictures
since the 4 page only has drawings.

Installation is simple and quick, about 45 minutes to clean off
the works bench or desk to find an usable horizontal surface. Once
this was done I started my HP-55 calculator timer and found my install
time was 12 minutes and a few seconds.

The 706 install is six easy steps, remove the 10 screws 5 for the
cover and bottom peices. This take under 3 minutes, the next 5 minutes
you will spent carefully pulling the micro 4 pin P1 cable from
the top of the unit thru the side openings until it appears on the bottom.

After that you thread the DSP cable from teh bototm to the top. The DSP
board intercepts the audio. The control signals are rounted thru a small
10 pin film like ribbon wire about 3 inches long. Carefully insert this
in the DSP and the PLL board and your almost done. Velcro holds the DSP
board to the bottom of the unit. Watch for pinched wires as you button
up the cases.

TOOLS
Tools needed are a small phillips crew driver to remove the 10 screws
and I used a pry lever to snap the covers off since they fit rather snug.
Also long nouse pliers are helpful to remove P1 and help thread the
cables around the casing.

OPERATION
The new menu is S4 - S4 looks like this "S4 ANF NR NRL"
F1 toglls the Auto notch filter on and off, F2 toggles the Noise
Reduction on off. F3 togges into another sub menu "S4 LEVEL ## NRL"
pressing F1 still toggles the Aout notch on and off, yet F2 does nothing
(why not toggle the NR on off as the above menu does?" F3 exit back to
the previous menu "S4 ANF NR NRL".

While in the NRL (NR level setting DSP menu) the channel control
sets the number from 0 thru 15 so you will see "S4 LEVEL ## NRL"

where ## is teh level from 0 thru 15.

ANF
Mt 706 replaces my TS-430 and I missed teh notch filter on the 430.
Nowith with Auto Notch I love the 706. It works great. I tried all
sort of funny things playing FM broadcast stations music thru the
DSP copying CW with auto notch on, tunning WWV with the DSP notching
it! Im very pleased with the Notch filter, seems like its always
worth having on especially on 40 meters. It attched the stronges
signals first, I think, Since i can heard some weak (not annoying)
tones thru it.

ANL
The noice filter is 'like' a high pass filter that has a tunnely sound
to it. Cranking the level from 0 thru 15 tkes out the hiss level!
Works well. Strong signals can have a higher setting with out distrortion.
Setting the high level to 15 can clip some audio, my favorite settings
is about 4 r 5 so far.

I have never used any other DSP other then the radio shack one $29?
(loaned by a friend, yes its junk!) But I think the DSP for the Icom
radios is worth teh money, it doesnt pull weak signals out of the mud
but does make copying the signals much more pleasnt. Its additcive
no wonder they are so popular as buit in features and external add ons.

Wish list. I wish Icom would have used F2 in the Level menu to
control the NB Nouce blanker on and off or done something useful with
